Zech,2013-04-18 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 13 contains literature published in 1975 and received before August 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included

We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation Leopoldshafen which supported our abstracting service by sending us retrospective literature searches *Selected Water Resources Abstracts*, 1991

Water Pollution and Water Quality Control of Selected Chinese Reservoir Basins Tinglin Huang, 2015-09-24 This volume provides a detailed overview of water pollution and control of several selected Chinese reservoirs It explores sediment contamination as well as algal blooms and their impact on water quality Several chapters also discuss various methods of quality control such as mixing oxygenation combined with microbial remediation technologies Due to their broad geographical distribution and different nutrition levels the investigated reservoirs the Jinpen Shibianyu Fenhe Zhelin and Zhoucun reservoirs can be regarded as representative for China This comprehensive work will appeal to researchers advanced students and reservoir managers **Parliamentary Papers** Great Britain. Water Quality Management Asit Biswas, Cecilia Tortajada, Rafael Izquierdo, 2014-06-03 The global attention in recent years has focused primarily on water quantity and allocation issues Water quality has received significantly less attention than water quantity Commendable progress has been made by the developed world to control point sources of pollution but commensurate progress in reducing non point sources has not been made In the third world countries both point and non point sources of pollution are becoming increasingly a serious concern Already nearly all water bodies in such countries near and around urban centres have been severely polluted with very high health and environmental costs The book assesses the current status of water quality management in both developed and developing worlds as well as analysing the effectiveness of economic instruments and legal and institutional frameworks to control water contamination It outlines the importance of building up social and political awareness to reverse the trend of continuing water quality deterioration which is likely to be a most challenging task in the coming years This book was published as a special issue of International Journal of Water Resources Development *Water-Quality Engineering in Natural Systems* David A. Chin, 2006-05-19 FOCUSING ON CONTAMINANT FATE AND TRANSPORT DESIGN OF ENVIRONMENTAL CONTROL SYSTEMS AND REGULATORY CONSTRAINTS This textbook details the fundamental equations that describe the fate and transport of contaminants in the water environment The application of these fundamental equations to the design of environmental control systems and methodologies for assessing the impact of contaminant discharges into rivers lakes wetlands ground water and oceans are all covered Readers learn to assess how much waste can be safely assimilated into a water body by developing a solid understanding of the relationship between the type of pollutant discharged the characteristics of the receiving water and physical chemical and biological impacts In cases of surface runoff from urban and agricultural watersheds quantitative

relationships between the quality of surface runoff and the characteristics of contaminant sources located within the watersheds are presented. Some of the text's distinguishing features include its emphasis on the engineering design of systems that control the fate and transport of contaminants in the water environment, the design of remediation systems and regulatory constraints. Particular attention is given to use attainability analyses and the estimation of total maximum daily loads, both of which are essential components of water quality control in natural systems. Readers are provided with a thorough explanation of the complex set of laws and regulations governing water quality control in the United States. Proven as an effective textbook in several offerings of the author's class, *Water Quality Control in Natural Systems*, the flow of the text is carefully structured to facilitate learning. Moreover, a number of practical pedagogical tools are offered. Practical examples used throughout the text illustrate the effects of controlling the quality, quantity, timing, and distribution of contaminant discharges into the environment. End-of-chapter problems and an accompanying solutions manual help readers assess their grasp of each topic as they progress through the text. Several appendices with useful reference material are provided, including current U.S. Water Quality Standards. Detailed bibliography guides readers to additional resources to explore particular topics in greater depth. With its emphasis on contaminant fate and transport and design of environmental control systems, this text is ideal for upper-level undergraduates and graduate students in environmental and civil engineering programs. Environmental scientists and practicing environmental civil engineers will also find the text relevant and useful.

National Water Quality Inventory. United States. Environmental Protection Agency. Office of Water, 1992. This report summarizes water quality assessment information submitted by the States to the U.S. Environmental Protection Agency (EPA) in 1990 under Section 305(b) of the Clean Water Act. The States based their water quality assessments on data collected in 1988 and 1989 using physical, chemical, and evaluative approaches such as sending questionnaires to fisheries biologists and analyzing land use data.
