Quadratic Algebras:

Quadratic Algebras Alexander Polishchuk, Leonid Positselski, 2005 This book introduces recent developments in the study of algebras defined by quadratic relations One of the main problems in the study of these and similarly defined algebras is how to control their size A central notion in solving this problem is the notion of a Koszul algebra which was introduced in 1970 by S Priddy and then appeared in many areas of mathematics such as algebraic geometry representation theory non commutative geometry K theory number theory and non commutative linear algebra The authors give a coherent exposition of the theory of quadratic and Koszul algebras including various definitions of Koszulness duality theory Poincare Birkhoff Witt type theorems for Koszul algebras and the Koszul deformation principle In the concluding chapter of the book they explain a surprising connection between Koszul algebras and one dependent discrete time stochastic processes The book can be used by graduate students and researchers working in algebra and any of the above mentioned areas of mathematics

Quadratic Algebras, Clifford Algebras, and Arithmetic Witt Groups Alexander J. Hahn, 2012-12-06 Quadratic Algebras Clifford Algebras and Arithmetic Forms introduces mathematicians to the large and dynamic area of algebras and forms over commutative rings The book begins very elementary and progresses gradually in its degree of difficulty Topics include the connection between quadratic algebras Clifford algebras and quadratic forms Brauer groups the matrix theory of Clifford algebras over fields Witt groups of quadratic and symmetric bilinear forms Some of the new results included by the author concern the representation of Clifford algebras the structure of Arf algebra in the free case connections between the group of isomorphic classes of finitely generated projectives of rank one and arithmetic results about the quadratic Witt group

Block, This book contains the collected works of A Adrian Albert a leading algebraist of the twentieth century Albert made many important contributions to the theory of the Brauer group and central simple algebras Riemann matrices nonassociative algebras and other topics Part 1 focuses on associative algebras and Riemann matrices part 2 on nonassociative algebras and miscellany Because much of Albert s work remains of vital interest in contemporary research this volume will interest mathematicians in a variety of areas

Numbers Heinz-Dieter Ebbinghaus, Hans Hermes, Friedrich Hirzebruch, Max Koecher, Klaus Mainzer, Jürgen Neukirch, Alexander Prestel, Reinhold Remmert, 2012-12-06 A book about numbers sounds rather dull This one is not Instead it is a lively story about one thread of mathematics the concept of number told by eight authors and organized into a historical narrative that leads the reader from ancient Egypt to the late twentieth century It is a story that begins with some of the simplest ideas of mathematics and ends with some of the most complex It is a story that mathematicians both amateur and professional ought to know Why write about numbers Mathematicians have always found

it difficult to develop broad perspective about their subject While we each view our specialty as having roots in the past and sometimes having connections to other specialties in the present we seldom see the panorama of mathematical development over thousands of years Numbers attempts to give that broad perspective from hieroglyphs to K theory from Dedekind cuts to nonstandard analysis

Noncommutative Rings Susan Montgomery, Lance Small, 2012-12-06 This volume collects some of the survey lectures delivered at the Micro program on Noncommutative Rings held at MSRI July 10-21 1989 While the program was concerned with recent advances in ring theory it also had as an important component lectures on related areas of mathematics where ring theory might be expected to have an impact Thus there are lectures of S P Smith on quantum groups and Marc Rieffel on algebraic aspects of quantum field theory Martin Lorenz and Donald Passman consider in their lectures various aspects of crossed products homological and K theoretic to group actions Kenneth Brown presents the modern theory of Noetherian rings and localization These contributions as well as the others not presented here show that ring theory remains a vigorous and useful area The planning and organization of the program were done by the undersigned and the late Robert Warfield His illness prevented his attendance at the meeting It is to him we dedicate this volume The organizers wish to extend their thanks to Irving Kaplansky Director of MSRI and the staff for all of their efforts in making this conference such a success Susan Montgomery Lance Small vii
