Tool	Process	Goal
Comparison table	For multiple categories and numerical data elements that do not need to be counted or calculated, create a table with the elements as columns and the categories as rows.	Determine the relative quantities for the elements.
Cross-tabulation table	For multiple categories and data elements that need to be counted or calculated, create a pivot table with the elements as columns and the categories as rows.	Determine the relative quantities for the elements.
Histogram	For one numerical data element, create a series of equal ranges, and sort the responses into the ranges. Graph the height of each range on the x-axis and the number of responses on the y-axis.	Determine the relative number of responses in each range.
Distribution curve	For one numerical data element, create a histogram. Calculate the mean and superimpose a bell curve of normal distribution on the histogram.	Determine the unique pattern of the responses.
Run chart	For one numerical data element that has been recorded on multiple occasions over time, graph the time sequence intervals on the x-axis and the measurements on the y-axis.	Determine the range of variation to establish acceptable values.
Bar graph	For one textual data element, sort the responses into categories. Count the items in each category. Create a vertical or horizontal scale showing the range of totals as bars of different heights.	Determine the relative sizes of the categories.
