Quantitative Dynamic Ecology:

Quantitative and Dynamic Ecology Kenneth A. Kershaw, 1975 Quantitative and Dynamic Ecology Kenneth Andrew Kershaw, 1971 *Quantitative Ecological Theory* M.R. Rose, 2012-12-06 This is an inadvertent book though it did arise naturally enough from a course I give in theoretical ecology But I wouldn't have given the course at all if one colleague in my department hadn't left for a leave of absence while another abruptly resigned This propelled me to the fore where this teaching responsibility was concerned one I had never had any intention of discharging Then it turned out that one of my students was regularly unable to make half the classes As a result I began giving him my lecture notes each week As I knew that someone else would be reading them I began to write my notes more carefully Naturally enough the other students soon began to demand the notes too Eventually they were indulged Thus I found myself writing a textbook manuscript By the next year the students were handed all their notes in one package at the outset But these were still just hand written Inevitably the demand that they be typed arose This I didn't want to do until I found a publisher As it turned out Tim Hardwick of Croom Helm was willing to have his firm fill this role to my great satisfaction and his considerable frustration I have been a desultory author about producing this final text and can only express my gratitude for his enduring patience over more than 18 months of delays **Quantitative and dynamic plant ecology**, 1974 Quantitative and Dynamic Plant Ecology Kenneth A. Kershaw, 1975 *Methods in Biogeochemistry of Wetlands* Ronald D. DeLaune, K. Remesh Reddy, Curtis J. Richardson, J. Patrick Megonigal, 2020-01-22 Wetlands occur at the interface of upland and aquatic ecosystems making them unique environments that are vital to ecosystem health But wetlands are also challenging to assess and understand Wetland researchers have developed specialized analytical methods and sampling techniques that are now assembled for the first time in one volume More than 100 experts provide key methods for sampling quantifying and characterizing wetlands including wetland soils plant communities and processes nutrients greenhouse gas fluxes redox active elements toxins transport processes wetland water budgets and more Landscape Ecological Analysis Jeffrey M. Klopatek, Robert H. Gardner, 2012-12-06 Studies in landscape ecology focus on the effect of heterogeneity on ecosystem structure and function Vigorous growth in the field has included the development of methods and results that can be applied to an impressive range of environmental issues The purpose of this book is to provide the reader with a current perspective on this rapidly developing science This book features contributions by internationally renowned experts in the field that address a broad spectrum of political theoretical and applied aspects of the subject Chapters describe a number of methods and models that are used at landscape and regional scales within the context of ecosystem management to assess changes in biodiversity and to evaluate sustainable landscape planning for cultural as well as natural settings Also included are instructional models to assist in teaching **The Background of Ecology** Robert P. McIntosh, 1986-09-26 The Background of Ecology is a critical and up to date review of the origins and development of ecology with emphasis on the major concepts and theories shared in

the ecological traditions of plant and animal ecology limnology and oceanography The work traces developments in each of these somewhat isolated areas and identifies where possible parallels or convergences among them Dr McIntosh describes how ecology emerged as a science in the context of nineteenth century natural history

Wildlife and Landscape Ecology John A. Bissonette,2012-12-06 Ecologists increasingly recognize the importance of scale in our understanding of nature Landscape ecology in particular emphasizes temporal and spatial scales While research and management of wildlife has traditionally emphasized studies at smaller scales it is now acknowledged that larger landscape level patterns strongly influence demographic processes in wild animal species This book is the first to provide the conceptual basis for learning how larger scale patterns and processes can influence the biology and management of wildlife species It is divided into three sections Underlying Concepts Landscape Metrics Applications and Large Scale Management Wildlife and Landscape Ecology will be welcomed by scientists and managers with interest in and responsibility for the health of wild populations and their role in ecosystems

Ecological Modeling William E. Grant,Todd M. Swannack,2011-08-26 Ecological Modeling A Commonsense Approach to Theory and Practice explores how simulation modeling and its new ecological applications can offer solutions to complex natural resource management problems This is a practical guide for students teachers and professional ecologists Examines four phases of the modeling process conceptual model formulation quantitative model specification model evaluation and model use Provides useful building blocks for constructing systems simulation models Includes a format for reporting the development and use of simulation models Offers an integrated systems perspective for students faculty and professionals Features helpful insights from the author gained over 30 years of university teaching I can strongly recommend the book as textbook for all courses in population dynamic modeling particularly when the course is planned for the second or third year of a bachelor study in ecology environmental science or ecological engineering It uncovers very clearly for the readers the scientific idea and thinking behind modeling and all the necessary steps in the development of models Ecological Modeling Journal 2009

Foundations of Macroecology Felisa A. Smith,John L. Gittleman,James H. Brown,2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist The term itself was first introduced to the modern literature by James H Brown and Brian A Maurer in a 1989 paper and it is Brown s classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species

richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998 Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike

Forecasting Forest Futures Hamish Kimmins, Kim Scoullar, Brad Seely, Juan A. Blanco, Clive Welham, 2010 Modelling is an important tool for understanding the complexity of forest ecosystems and the variety of interactions of ecosystem components processes and values This book describes the hybrid approach to modelling forest ecosystems and their possible response to natural and management induced disturbance The book describes the FORECAST family of ecosystem management models at three different spatial scales tree stand and landscape and compares them with alternative models at these three spatial scales The book will help forest managers to understand what to expect from ecosystem based forest models serve as a tool for use in teaching about sustainability scenario analysis and value trade offs in natural resources management and assist policy makers managers and researches working in assessment of sustainable forest management and ecosystem management Several real life examples of using the FORECAST family of models in forest management and other applications are presented from countries including Canada China Spain and the USA to illustrate the concepts described in the text The book also demonstrates how these models can be extended for scenario and value trade off analysis through visualization and educational or management games

Vegetation Dynamics J. Miles, 2012-12-06 Vegetation dynamics is an important subject A knowledge and understanding of it is central to the science of vegetation management in grassland range and nature reserve management and in aspects of wildlife management forestry and agricultural crop production It is also a large and diffuse subject In a small book such as this I had to be highly selective and could not do equal justice to all aspects I have had therefore to condense many examples and more regrettably many arguments While I have tried to present a broad selection of topics and examples the content inevitably reflects my own special interests and experience The study of vegetation and its dynamics does not lend itself to neat and tidy divisions and the way of allotting material into different chapters here is arbitrary I have used Chapter I to introduce a number of ideas beginning with the nature of vegetation in space then passing to an introduction to the nature of changes in vegetation with time in particular those generally known as successions The book also contains a number of asides to the text s central arguments I hope the reader finds these interesting rather than disconcerting

Integrated Models in Geography (Routledge Revivals) Richard Chorley, Peter Haggett, 2013-11-05 First published in 1967 this book explores the theme of geographical generalization or model building It is composed of five of the chapters from the original Models in Geography published in 1967 The first chapter broadly outlines this theme and examines the nature and function of generalized

statements ranging from conceptual models to scale models in a geographical context The following chapters deal with mixed system model building in geography wherein data techniques and concepts in both physical and human geography are integrated The book contains chapters on organisms and ecosystems as geographical models as well as spatial patterns in human geography This text represents a robustly anti idiographic statement of modern work in one of the major branches of geography

Microstructural Characterisation of Fibre-Reinforced Composites John Summerscales,1998-07-10 Over the last 50 years great progress has been made in developing artificial fibre reinforced composite materials generally using filaments with microscopic diameters A wide range of reinforcement forms from random arrays to fully aligned can be used for commercial applications with the microstructure being a critical factor in realising the required properties in a material This is the first up to date review of how to apply advanced microstructural characterisation techniques to fibre reinforced composites Each chapter is designed to offer both a stand alone introduction to its topic and detailed referencing for follow up research With contributions from experts from around the world the book will be an essential reference for materials scientists and research workers in industry and academia alike Comprehensive and up to date review of the microstructural features of composites Covers a wide range of microstructure characterisation techniques

Environmental Anthropology Today Helen Kopnina,Eleanor Shoreman-Ouimet,2011-08-05 Today we face some of the greatest environmental challenges in global history Understanding the damage being done and the varied ethics and efforts contributing to its repair is of vital importance This volume poses the question What can increasing the emphasis on the environment in environmental anthropology along with the science of its problems and the theoretical and methodological tools of anthropological practice do to aid conservation efforts policy initiatives and our overall understanding of how to survive as citizens of the planet Environmental Anthropology Today combines a range of new ethnographic work with chapters exploring key theoretical and methodological issues and draws on disciplines such as sociology and environmental science as well as anthropology to illuminate those issues The case studies include work on North America Europe India Africa Asia and South America offering the reader a stimulating and thoughtful survey of the work currently being conducted in the field
