Some Quantitative Methods and Models in Economic Theory

$\bar{X}_{k+1} = D^{-1}FD\bar{X}_k + D^{-1}GU_k, \bar{Y}_k = H\bar{D}\bar{X}_k,$
 $\bar{Y}(0) = 0, \bar{U}_0 = 1$ and $\bar{U}_k = 0$ for $k=1,2,\dots$ we have
 $(D^{-1}FD)^{k-1}(D^{-1}G) = HF^{k-1}G$, i.e. the output of system does not

depend on the choice of the basis.
On the other hand, at $n=r$ and $p=m=1$ from (67) we have $F = P(\sigma\bar{H}_{rr})M$

$$D^{-1}FD = D^{-1}P(\sigma\bar{H}_{rr})MD = \hat{P}(\sigma\bar{H}_{rr})\hat{M},$$

the equality (68) being satisfied for \hat{P} and \hat{M} :
 $D^{-1}PH_{rr}MD = E_n^n$

Mathematical Modeling in Economics, Ecology and the Environment N.V. Hritonenko, Yuri P. Yatsenko, 2013-04-17

The problems of interrelation between human economics and natural environment include scientific technical economic demographic social political and other aspects that are studied by scientists of many specialities One of the important aspects in scientific study of environmental and ecological problems is the development of mathematical and computer tools for rational management of economics and environment This book introduces a wide range of mathematical models in economics ecology and environmental sciences to a general mathematical audience with no in depth experience in this specific area Areas covered are controlled economic growth and technological development world dynamics environmental impact resource extraction air and water pollution propagation ecological population dynamics and exploitation A variety of known models are considered from classical ones Cobb Douglass production function Leontief input output analysis Solow models of economic dynamics Verhulst Pearl and Lotka Volterra models of population dynamics and others to the models of world dynamics and the models of water contamination propagation used after Chernobyl nuclear catastrophe Special attention is given to modelling of hierarchical regional economic ecological interaction and technological change in the context of environmental impact XIII XIV Construction of Mathematical Models **Applied Mathematical Modelling of**

Engineering Problems N.V. Hritonenko, Yuri P. Yatsenko, 2013-04-17 The subject of the book is the know how of applied mathematical modelling how to construct specific models and adjust them to a new engineering environment or more precise realistic assumptions how to analyze models for the purpose of investigating real life phenomena and how the models can extend our knowledge about a specific engineering process Two major sources of the book are the stock of classic models and the authors wide experience in the field The book provides a theoretical background to guide the development of practical models and their investigation It considers general modelling techniques explains basic underlying physical laws and shows how to transform them into a set of mathematical equations The emphasis is placed on common features of the modelling process in various applications as well as on complications and generalizations of models The book covers a variety of applications mechanical acoustical physical and electrical water transportation and contamination processes bioengineering and population control production systems and technical equipment renovation Mathematical tools include partial and ordinary differential equations difference and integral equations the calculus of variations optimal control bifurcation methods and related subjects **Modeling and Optimization of the Lifetime of Technologies** N.V.

Hritonenko, Yuri P. Yatsenko, 2013-12-01 Modern economic growth is characterized by structural changes based on the introduction of new technologies into economics The replacement and renovation of technologies in industrial environments undergoing technical change is clearly one of the key aspects of economic development The mathematical modeling of

evolutionary economics under technical change TC has been rigorously considered by many authors during last decades There is a wide variety of economic approaches and models describing different aspects of technical change Among these are the models of embodied technical progress 19 35 70 129 endogenous growth models 94 102 the models of technological innovations 31 32 41 and others The perspective self organization evolutionary approach is developed in 20 38 122 123 124 126 which unites the aspects of diffusion of new technologies technological and behavioral diversity of firms learning mechanisms age dependent effects and other important features of real life economics On the whole an interest in evolutionary economics has brought considerable progress in the description and conceptualization of the sources characteristics direction and effects of technical change 125 However the modeling and control of technology lifetime under technical change has received rather little attention in mathematical economics in contrary to other aspects of technical progress The lifetime of technologies has rarely been formally treated as a part of more general mathematical theory of economic dynamics A problem which is still to be resolved consists in establishing the rational strategies of technologies replacement under various assumptions on the behavior of technical change

Modeling Multigroup Populations Robert Schoen, 2013-11-11 This book deals with models that can capture the behavior of individuals and groups over time Organizationally it is divided into three parts Part I discusses the basic decrement only life table and its associated stable population Part II examines multistate or increment decrement models and provides the first comprehensive treatment of those extremely flexible and useful life table models Part III looks at two sex models which simultaneously incorporate the marriage or fertility behavior of males and females Those models are explored more fully and completely here than has been the case to date and the importance of including the experience of both sexes is demonstrated analytically as well as empirically In sum this book considers a broad range of population models with a view to showing that such models can be eminently calculable clearly interpretable and analytically valuable for the study of many kinds of social behavior Four appendixes have been added to make the book more usable Appendix A provides a brief introduction to calculus and matrix algebra so that readers can understand though not necessarily derive the equations presented Appendix B provides an index of the principal symbols used Appendix C gives the answers to the exercises found at the end of each chapter Those exercises should be seen as an extension of the text and are intended to inform as well as to challenge

Time, Space and Capital Åke E. Andersson, David Emanuel Andersson, 2017-07-28 In this challenging book the authors demonstrate that economists tend to misunderstand capital Frank Knight was an exception as he argued that because all resources are more or less durable and have uncertain future uses they can consequently be classed as capital Thus capital rather than labor is the real source of creativity innovation and accumulation But capital is also a phenomenon in time and in space Offering a new and path breaking theory they show how durable capital with large spatial domains infrastructural capital such as institutions public knowledge and networks can help explain the long term development of cities and nations

Advanced Lectures in Quantitative Economics Frederick van Der Ploeg, 2014-05-01 Advanced Lectures in Quantitative Economics summarizes some of the efforts of a second phase program for first rate candidates with a Master's degree in economics who wish to continue with a doctoral degree in quantitative economics This book is organized into three main topics macroeconomics microeconomics and econometrics This text specifically discusses the Neo Keynesian macroeconomics in an open economy international coordination of monetary policies under alternative exchange rate regimes and prospects for global trade imbalances The post war developments in labor economics introduction to overlapping generation models and measurement of expectations and direct tests of the REH are also elaborated This monograph likewise covers the dynamic econometric modeling of decisions under uncertainty and fundamental bordered matrix of linear estimation This publication is a good reference for students and specialists interested in quantitative economics **Multidimensional Mathematical Demography** Kenneth C Land, Andrei Rogers, 2013-10-22

Multidimensional Mathematical Demography is a collection of papers dealing with the problems of inaccurate or unavailable demographic data transformation of data into probabilities multidimensional population dynamic models and the problems of heterogeneity The papers suggest a unified perspective with emphasis on data structure to work out multidimensional analysis with incomplete data To solve inaccuracies in data one paper notes that designs and use of model multistate schedules for example methods of inferring data should be a major part in multistate modeling Other papers discuss the state of the art in abridged increment decrement life table methodology They also describe the estimation of transition probabilities in increment decrement life tables where mobility data available is from the count of movers from a population survey One paper reviews the possible extension of a multiregional stochastic theorem associated in a single regional case and then analyzes what the stochastic model needs when it is used with real data Another paper explains strategies concerning population heterogeneity when it pertains to the mixtures of Markov and semi Markov processes Markov processes subject to measurement error and the Heckman and Borjas model This collection can be read profitably by statisticians mathematicians mathematical demographers mathematical sociologists economists professionals in census bureaus and students of sociology or geography **Forecasting in the Social and Natural Sciences** Kenneth C.

Land, Stephen H. Schneider, 2012-12-06 Social and natural scientists often are called upon to produce or participate in the production of forecasts This volume assembles essays that a describe the organizational and political context of applied forecasting b review the state of the art for many forecasting models and methods and c discuss issues of predictability the implications of forecast errors and model construction linkage and verification The essays should be of particular interest to social and natural scientists concerned with forecasting large scale systems This project had its origins in discussions of

social forecasts and forecasting methodologies initiated a few years ago by several social and natural science members of the Social Science Research Council's Committee on Social Indicators. It became apparent in these discussions that certain similar problems were confronted in forecasting large scale systems be they social or natural. In response the Committee hypothesized that much could be learned through more extended and systematic interchanges among social and natural scientists focusing on the formal methodologies applied in forecasting. To put this conjecture to the test the Committee sponsored a conference at the National Center for Atmospheric Research in Boulder Colorado on June 10-13 1984 on forecasting in the social and natural sciences. The conference was co chaired by Committee members Kenneth C Land and Stephen H Schneider representing respectively the social and natural science membership of the Committee. Support for the conference was provided by a grant to the Council from the Division of Social and Economic Science of the National Science Foundation.

Metrics of Subjective Well-Being: Limits and Improvements Gaël Brulé, Filomena Maggino, 2017-08-02 This volume analyses the quantification of the effect of factors measuring subjective well being and in particular on the metrics applied. With happiness studies flourishing over the last decades both in number of publications as well as in their exposure researchers working in this field are aware of potential weaknesses and pitfalls of these metrics. Contributors to this volume reflect on different factors influencing quantification such as scale size wording language biases and cultural comparability in order to raise awareness on the tools and on their conditions of use.

Econometrics as a Con Art Imad A. Moosa, 2017-07-28 Imad Moosa challenges convention with this comprehensive and compelling critique of econometrics condemning the common practices of misapplied statistical methods in both economics and finance.

Theories Of Comparative Political Economy Ronald H Chilcote, 2018-02-05 Professor Chilcote has written an extraordinary comprehensive comparison of mainstream liberal views and alternative radical views of history development class government and democracy. This book will be extremely valuable to both students and scholars. Howard Sherman University of California Riverside. Theories of Comparative Political Economy builds on the proposition that the study of politics and economics has evolved into political economy in a number of significant ways and that the new issues and ideas that became prominent in the 1980s and 1990s will carry on into the new millennium. This book is a sequel to Chilcote's Theories of Comparative Politics Westview 1981 which was substantially revised and published in a second edition in 1994.
