Ross,2003-11-30 When work began on the first volume ofthis text in 1992 the science of dis tribution management was still very much a backwater of general manage ment and academic thought While most of the body of knowledge associated with calculating EOQs fair shares inventory deployment productivity curves and other operations management techniques had long been solidly established new thinking about distribution management had taken a definite back seat to the then dominant interest in Lean thinking quality management and business process reengineering and their impact on manufacturing and service organizations For the most part discussion relating to the distri bution function centered on a fairly recent concept called Logistics Manage ment But despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of com petitive advantage on its own most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost contain ment and customer fulfillment objectives In the end distribution manage ment was for the most part still considered a dreary science concerned with oftransportation rates and cost trade offs expediting and the tedious calculus Today the science of distribution has become perhaps one of the most im portant and exciting disciplines in the management of business **Hospitality Marketing Management** Robert D. Aviation and Tourism Anne Graham, Andreas Papatheodorou, Peter Forsyth, 2016-04-08 Transport is an essential element of tourism providing the vital link between the tourist generating areas and destinations Good accessibility which is determined by the transport services provided is a fundamental condition for the development of any tourist destination Moreover the transport industry can be a major beneficiary of tourism because of the additional passenger demand that may be generated Aviation is an increasingly important mode of transport for tourism markets Whilst geography has meant that in modern times air travel has always been the dominant mode for long distance travel and much international tourism moves towards deregulation and in particular the emergence of the low cost carrier sector have also increased aviation's significance for short and medium haul tourism trips Thus developments in aviation can have very major implications for many leisure and business tourism markets However the characteristics and needs of leisure travellers are generally so very different from business travellers that this necessitates a separate consideration of these markets if a detailed understanding of the relationship with aviation is to be gained In spite of the obvious closeness between the aviation and tourism industries there are very few specialist texts on this subject Most tourism focused books consider aviation as just one component of the tourism industry which needs to be discussed whereas aviation specialist texts rarely concentrate on just leisure travel In addition there is very little literature that gives a detailed appreciation of the complexities and potential conflicts associated with the development of coherent and effective aviation and tourism policies Therefore it is the aim of this book to fill this important gap which exists with a comprehensive in depth study of the relationship between aviation and leisure travel The book deals exclusively with issues related to the relationship between aviation and leisure travel It does this with an analysis of the theoretical concepts relevant to the subject area combined with a detailed investigation of current practice within the aviation and tourism industries Each chapter is illustrated with case study material that will reinforce the understanding of the issues that are being examined
