Quantitative Organic Microanalysis Fritz Pregl, 1924 **Qualitative Organic Microanalysis** Frank Schneider, 2012-12-06 The most important task of the analytical chemist aside from the acquisition of experimental data is the coordination and interpretation of such data in terms of the qualitative and quantitative composition of the test substance As in the old tale of the blind men and the elephant a single observation or test not considered in conjunction with others may lead to entirely erroneous conclusions On the other hand mere increase in the number of such tests without regard to their need or to their relationship to each other also may not suffice for drawing the correct inferences from the experimental evidence The deductive reasoning which is usually associated with the analytical chemist finds its greatest opportunity for application in the problems of cognition and recognition of carbon compounds Since a rigid scheme of procedure tends to produce a corresponding rigidity of thought the intent of the present book is to outline approaches which will minimize the chances of misinterpretation without restricting the analytical chemist in his choice of tests The selection of subsequent tests or reactions should be governed by the results of the preceding ones rather than by an arbitrary list The relationships of the various approaches and the information derived from each to the composition and constitution of the test substance are brought out in the discussion with the hope that they may serve as guide lines for such selection **Quantitative Analysis** Stephen Popoff, 1927 **Annual Progress Report for the Period...** C.J. of protein metabolism provided by Volumes I and II The present volume covers two aspects of protein metabolism not specifically considered in the earlier parts of the treatise First there is a section of three chapters dealing with changes in protein metabolism during evolution and during growth and development At its most fundamental level this part deals in reality with an aspect of regulation of protein metabolism since differences in metabolism between species and changes occurring during growth are both outward expressions of genetic control mechanisms that determine the form and characteristics of an animal The other section in this volume is a survey of methods appropriate to the study of protein metabolism in mammals This part of the work should prove of special interest to investigators who require a critical evaluation of the possibilities and limitations of methods applicable to intact animals
