Quantum Field Theory And Topology Grundlehren Der Mathematischen Wissenschaften No 307:

Markov Processes, Brownian Motion, and Time Symmetry Kai Lai Chung, John B. Walsh, 2006-01-18 From the reviews of the First Edition This excellent book is based on several sets of lecture notes written over a decade and has its origin in a one semester course given by the author at the ETH Z rich in the spring of 1970 The author s aim was to present some of the best features of Markov processes and in particular of Brownian motion with a minimum of prerequisites and technicalities The reader who becomes acquainted with the volume cannot but agree with the reviewer that the author was very successful in accomplishing this goal The volume is very useful for people who wish to learn Markov processes but it seems to the reviewer that it is also of great interest to specialists in this area who could derive much stimulus from it One can be convinced that it will receive wide circulation Mathematical Reviews This new edition contains 9 new chapters which include new exercises references and multiple corrections throughout the original text Hyperbolic Complex Spaces Shoshichi

Kobayashi, 2013-03-09 In the three decades since the introduction of the Kobayashi distance the subject of hyperbolic complex spaces and holomorphic mappings has grown to be a big industry This book gives a comprehensive and systematic account on the Carathéodory and Kobayashi distances hyperbolic complex spaces and holomorphic mappings with geometric methods A very complete list of references should be useful for prospective researchers in this area *Tauberian Theory*

Jacob Korevaar, 2004-05-26 This book traces the development of Tauberian theory evoking the excitement surrounding the early results The author describes the fascination of the difficult Hardy Littlewood theorems and offers a new unified theory for Borel and circle methods *Convex Analysis and Minimization Algorithms I* Jean-Baptiste Hiriart-Urruty, Claude

Lemarechal, 1996-10-30 Convex Analysis may be considered as a refinement of standard calculus with equalities and approximations replaced by inequalities As such it can easily be integrated into a graduate study curriculum Minimization algorithms more specifically those adapted to non differentiable functions provide an immediate application of convex analysis to various fields related to optimization and operations research These two topics making up the title of the book reflect the two origins of the authors who belong respectively to the academic world and to that of applications Part I can be used as an introductory textbook as a basis for courses or for self study Part II continues this at a higher technical level and is addressed more to specialists collecting results that so far have not appeared in books **Algebra, Arithmetic, and**

Geometry Yuri Tschinkel, Yuri Zarhin, 2010-04-11 *EM* Algebra Arithmetic and Geometry In Honor of Yu I Manin *EM* consists of invited expository and research articles on new developments arising from Manin s outstanding contributions to mathematics

Integrability, Quantization, and Geometry: I. Integrable Systems Sergey Novikov, Igor Krichever, Oleg Ogievetsky, Senya Shlosman, 2021-04-12 This book is a collection of articles written in memory of Boris Dubrovin 1950 2019 The authors express their admiration for his remarkable personality and for the contributions he made to mathematical physics For many of the authors Dubrovin was a friend colleague inspiring mentor and teacher The contributions to this collection of papers

are split into two parts Integrable Systems and Quantum Theories and Algebraic Geometry reflecting the areas of main scientific interests of Dubrovin Chronologically these interests may be divided into several parts integrable systems integrable systems of hydrodynamic type WDVV equations Frobenius manifolds isomonodromy equations flat connections and quantum cohomology The articles included in the first part are more or less directly devoted to these areas primarily with the first three listed above The second part contains articles on quantum theories and algebraic geometry and is less directly connected with Dubrovin's early interests

Percolation Geoffrey R. Grimmett, 2013-03-09 Percolation theory is the study of an idealized random medium in two or more dimensions The mathematical theory is mature and continues to give rise to problems of special beauty and difficulty Percolation is pivotal for studying more complex physical systems exhibiting phase transitions The emphasis of this book is upon core mathematical material and the presentation of the shortest and most accessible proofs The book is intended for graduate students and researchers in probability and mathematical physics Almost no specialist knowledge is assumed Much new material appears in this second edition including dynamic and static renormalization strict inequalities between critical points a sketch of the lace expansion and several essays on related fields and applications

Stochastic Interacting Systems: Contact, Voter and Exclusion Processes Thomas M. Liggett, 2013-03-09 Interactive Particle Systems is a branch of Probability Theory with close connections to Mathematical Physics and Mathematical Biology In 1985 the author wrote a book T Liggett Interacting Particle System ISBN 3 540 96069 that treated the subject as it was at that time The present book takes three of the most important models in the area and traces advances in our understanding of them since 1985 In so doing many of the most useful techniques in the field are explained and developed so that they can be applied to other models and in other contexts Extensive Notes and References sections discuss other work on these and related models Readers are expected to be familiar with analysis and probability at the graduate level but it is not assumed that they have mastered the material in the 1985 book This book is intended for graduate students and researchers in Probability Theory and in related areas of Mathematics Biology and Physics
