This book explains why so few efforts at reforming science education are successful and why it is that the 300 studies on the subject published over the past decade have done little more than add to a growing body of literature. The book describes programs which are successful in terms of faculty accomplishments, students graduated and entering advanced study or professional workplace, and showing evidence of high morale among both faculty and undergraduates. Common elements in many of these programs are abandonment of an almost exclusive emphasis on problem solving and modification of the lecture format to permit teaching of underlying concepts. Other variations in traditional introductory physics and chemistry courses are aimed at persuading those simply fulfilling graduation requirements to major in science, at bringing minority students into the fold, or at combining physics or various subfields of chemistry in different ways to promote better understanding. Harvard's chem/phys is provided as an example of such a combination, but also as a case study of how innovation can be stymied by a lack of university-wide change. The author uses methods of ethnography in reporting what makes individual programs interesting, what their faculty are doing, and what program participants are thinking. *Papers for the Conference on the Teaching of Modern Physics*, 1986. **The Cumulative Book Index**, 1989. A world list of books in the English language. **Academic American Encyclopedia: Q-R**, 1995. A twenty-one volume encyclopedia with 32,000 entries and more than 16,000 illustrations. *Paperbound Books in Print*, 1991. *Illinois Chemistry Teacher*, 2003. Books in Print Supplement, 1988. **Books in Series, 1876-1949** R.R. Bowker Company, 1982. Subject Guide to Books in Print, 1997. **Ciência E Cultura**, 1988.
