Reproductive Toxicology And Infertility:

Reproductive Toxicology and Infertility Anthony R. Scialli, Michael J. Zinaman, 1993 One of the most popular areas in toxicology is environmental toxicology its effects on human fertility Designed as a clinical reference this book focuses on both the mechanisms of reproductive failure male female the clinical techniques for assessing monitoring the effects of various toxicants on the reproductive process Section I provides a basic overview of the toxicologic effects of various agents on male female reproductive physiology the process of conception Section II builds on this background covers the mechanisms of toxicant action describing the ways in which normal reproduction may become deranged Section III describes clinical epidemiological methods by which fertility can be monitored by which reproductive toxicity might be identified

Reproduction is a collection of papers that deals with general reproductive biology and specific aspects of reproductive toxicology pertaining to the male sex. Some papers discuss testicular organization, reproductive toxicity testing systems, and germ cell genetic toxicology. The use of in vitro systems by investigators to dissect the male reproductive toxicants can lead to a more scientific approach toward hazard assessment and the development of safer drugs and chemicals. Other papers explain the fundamental reproductive biology of the testis, the neuroendocrine system, the epididymis, and accessory sex organs and spermatozoal evaluation. Toxicological aspects cover the toxicological evaluation of the complete reproductive system, testicular morphology, sperm assessment, and germ cell mutagenesis. One paper describes alternative methods in toxicology by using new in vitro systems that should reduce or eliminate the need for tests conducted on animals. In vitro methodology embraces other systems such as from subcellular fractions to isolated intact organs. In relation to target organ toxicity, the researcher can focus using primary cell cultures. This collection will prove helpful to toxicologists, graduate students, and researchers in biology, particularly in male reproductive toxicology and fertility testing.

Preventing Occupational Disease and Injury Barry S. Levy, 2005 **The Infertility Trap** R. John Aitken, 2022-05-05 A potential crisis in human fertility is brewing. As societies become more affluent, they experience changes that have a dramatic impact on reproduction. As average family sizes fall, the selection pressure for high fertility genes decreases, exacerbated by the IVF industry which allows infertility-linked genes to pass into the next generation. Male fertility rates are low for many reasons, including genetics and exposure to environmental toxins. So a perfect storm of factors is contriving to drive fertility rates down at unprecedented rates. If we do not recognize the reality of our situation and react accordingly, an uncontrollable decline in population numbers is likely, which we will be unable to reverse. This book will address in a unique and multifaceted way how the consequences of modern life affect fertility so that we can consider behavioural, social, medical, and environmental changes which could reduce the severity of what is about to come.
