Roots Of Reason Philosophical Essays On Rationality Evolution And Probability:

The Roots of Reason David Papineau, 2006-01-26 David Papineau presents a controversial view of human reason portraying it as a normal part of the natural world and drawing on the empirical sciences to illuminate its workings In these six interconnected essays he offers a fresh approach to some long standing problems Papineau rejects the contemporary orthodoxy that genuine thought hinges on some species of non natural normativity He explores the evolutionary histories of theoretical and practical rationality indicating ways in which capacities underlying human reasoning have been selected for their biological advantages He then looks at the connection between decision and probability explaining how good decisions need to be informed by causal as well as probabilistic facts Finally he defends the radical view that a satisfactory understanding of decision making is only possible within a specific interpretation of quantum mechanics By placing the subject in its scientific context Papineau shows how human rationality plays an explicable role in the functioning of the natural world

Reason and Rationality Maria Cristina Amoretti, Nicola Vassallo, 2013-05-02 Reason and rationality represent crucial elements of the self image of human beings and have unquestionably been among the most debated issues in Western philosophy dating from ancient Greece through the Middle Ages and to the present day Many words and thoughts have already been spent trying to define the nature and standards of reason and rationality what they could or ought to be and under what conditions something can be said to be rational This volume focuses instead on the relationships of reason and rationality to some relevant specific topics i e science knowledge gender politics ethics religion aesthetics language logic and metaphysics trying to uncover and clarify both the connections and differences in their various characterisations and uses

History and Causality M. Hewitson, 2014-01-22 This volume investigates the different attitudes of historians and other social scientists to questions of causality It argues that historical theorists after the linguistic turn have paid surprisingly little attention to causes in spite of the centrality of causation in many contemporary works of history

The Evolution of Human Wisdom Celia Deane-Drummond, Agustín Fuentes, 2017-10-18 This volume addresses key

questions about the puzzle of human origins by focusing on a topic that is largely unexplored thus far namely the evolution of human wisdom How can we best understand the human capacity for wisdom where did it come from and how did it emerge It explores lines of convergence and divergence between Christian theology and evolutionary anthropology in its search to identify different aspects of wisdom Critical to this discussion are the philosophical difficulties that arise when two very different methodological approaches to the manner of humans becoming wise are brought together The relative importance and significance of human language is another area of intense debate in defining the meaning of wisdom and its expression How far and to what extent does a theologically informed wisdom discourse push evolutionary anthropology to formulate new questions and vice versa This volume shows that there is no simple consonance between evolutionary anthropology and theology Yet each discipline has much to learn from the other the authors are in agreement that even in the midst of an awareness of dissonance and some tension there can still be mutual respect The goal of this book is to begin to develop a trans disciplinary approach to the evolution of human wisdom where each discipline is challenged to ask questions in a new way This volume tackles the relationship between theology and science in a fresh way by focusing on a specific theme wisdom that is equally generative for both theology and evolutionary anthropology

Rationalities in History D. L. d'Avray, 2010-09-23 In *Rationalities in History* the distinguished historian David d'Avray writes a new comparative history in the spirit of Max Weber In a strikingly original reassessment of seminal Weberian ideas d'Avray applies value rationality to the comparative history of religion and the philosophy of law Integrating theories of rational choice anthropological reflections on relativism and the recent philosophy of rationality with Weber's conceptual framework d'Avray seeks to disengage rationalisation from its enduring association with Western modernity This mode of analysis is contextualised through the examples of Buddhism Imperial China and sixteenth century Catholicism in the latter case building upon unpublished archival research This ambitious synthesis of social theory and comparative history will engage social scientists and historians from advanced undergraduate level upwards stimulating interdisciplinary discourse and making a significant contribution to the methodology of history D'Avray explores the potential of this new Weberian analysis further in his companion volume *Medieval Religious Rationalities*

EVOLUTION Michael Ruse, Joseph Travis, 2009-01-01 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope *Evolution* opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development evo devo and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linnaeus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to

Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Piltown Man to the Scopes trial and social Darwinism Readers will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the Origin of Species this volume is a fitting tribute to the science Darwin set in motion

Interpretivism and the Limits of Law Tomasz Gizbert-Studnicki, Francesca Poggi, Izabela Skoczeń, 2022-12-08 What does it mean to understand the law This challenging book discusses whether and how understanding the law is qualitatively different from understanding a different non legal text or linguistic utterance and whether knowledge of a language is sufficient to understand legal content in that language Many Worlds? Simon Saunders, Jonathan Barrett, Adrian Kent, David Wallace, 2010-06-24 What does realism about the quantum state imply What follows when quantum theory is applied without restriction if need be to the whole universe These are the questions which an illustrious team of philosophers and physicists debate in this volume All the contributors are agreed on realism and on the need or the aspiration for a theory that unites micro and macroworlds at least in principle But the further claim argued by some is that if you allow the Schrödinger equation unrestricted application supposing the quantum state to be something physically real then this universe is one of countlessly many others constantly branching in time all of which are real The result is the many worlds theory also known as the Everett interpretation of quantum mechanics The contrary claim sees this picture of many worlds as in no sense inherent in quantum mechanics even when the latter is allowed unrestricted scope and even given that the quantum state itself is something physically real For this picture of branching worlds fails to make physical sense let alone common sense even on its own terms The status of these worlds what they are made of is never adequately explained Ordinary ideas about time and identity over time become hopelessly compromised The concept of probability itself is brought into question This picture of many branching worlds is inchoate it is a vision an error There are realist alternatives to many worlds some even that preserve the Schrödinger equation unchanged Twenty specially written essays accompanied by commentaries and discussions examine these claims and counterclaims in depth They focus first on the question of ontology the existence of worlds Part 1 and 2 second on the interpretation of probability Parts 3 and 4 and third on alternatives or additions to many worlds Parts 5 and 6 The introduction offers a helpful guide to the arguments for the Everett interpretation particularly as they have been formulated in the last two decades *Medieval Religious Rationalities* D. L. d'Avray, 2010-09-23 Inspired by the social theories of Max Weber David d'Avray asks in what senses medieval religion was rational and in doing so proposes a new approach to the study of the medieval past Applying ideas developed in his companion volume on Rationalities in History he explores how values instrumental calculation legal formality and substantive rationality interact and the ways in which medieval beliefs were strengthened by their mutual connections by experience and by mental images He sheds new light on

key themes and figures in medieval religion ranging from conversion miracles and the ideas of Bernard of Clairvaux to Trinitarianism papal government and Francis of Assisi's charismatic authority This book shows how values and instrumental calculation affect each other in practice and demonstrates the ways in which the application of social theory can be used to generate fresh empirical research as well as new interpretative insights
