Scientific Knowledge Janet A. Kourany, 1998 Containing 31 readings reflecting the dynamism of the field this book provides readers with the most current and relevant readings available on issues in the philosophy of science All of the readings have been selected based on their clarity and coverage of the prevailing debates in the philosophy of science from logical positivism to anti-realism The book assumes no specialized training in formal logic or scientific methods and therefore can be appreciated by a wide range of readers *Scientific Knowledge: Basic Issues in the Philosophy of Science* Janet Kourany, 2001 Bayesianism and Scientific Reasoning Jonah N. Schupbach, 2022-03-31 This Element explores the Bayesian approach to the logic and epistemology of scientific reasoning Section 1 introduces the probability calculus as an appealing generalization of classical logic for uncertain reasoning Section 2 explores some of the vast terrain of Bayesian epistemology Three epistemological postulates suggested by Thomas Bayes in his seminal work guide the exploration This section discusses modern developments and defenses of these postulates as well as some important criticisms and complications that lie in wait for the Bayesian epistemologist Section 3 applies the formal tools and principles of the first two sections to a handful of topics in the epistemology of scientific reasoning confirmation explanatory reasoning evidential diversity and robustness analysis hypothesis competition and Ockham's Razor **American Book Publishing Record**, 2003

Problems of the Logic of Scientific Knowledge P.V. Tavanec, 2012-12-06 The Social Production of Scientific Knowledge E. Mendelsohn, P. Weingart, R.D. Whitely, 2012-12-06 *The Limits of Science* Wenceslao J. Gonzalez, 2016-10-05 The problem of the limits of science is twofold First there is the problem of demarcation i.e. the boundaries or barriers between what is science and what is not science Second there is the problem of the ceiling of scientific activity which leads to the confines of this human enterprise These two faces of the problem of the limits the barriers and the confines of science require a new analysis which is the task of this book The authors take into account the Kantian roots but they are focused on the current stage of the philosophical and methodological analyses of science This vision looks to supersede the Kantian approach in order to reach a richer conception of science **Foundations of the Logical Theory of Scientific Knowledge (Complex Logic)** A.A. Zinov'ev, 2012-12-06 Boston Studies in the Philosophy of Science are devoted to symposia congresses colloquia monographs and collected papers on the philosophical foundations of the sciences It is now our pleasure to include A.A. Zinov'ev's treatise on complex logic among these volumes Zinov'ev is one of the most creative of modern Soviet logicians and at the same time an innovative worker on the methodological foundations of science More over Zinov'ev although still a developing scholar has exerted a substantial and stimulating influence upon his colleagues and students in Moscow and within other philosophical and logical circles of the Soviet Union Hence it may be helpful in bringing this present work to an English reading audience to review briefly some contemporary Soviet investigations into scientific methodology During the 1950's a vigorous new research program in logic was undertaken and the initial published work

characteristic of most Soviet publications in the logic and methodology of the sciences was a collection of essays *Logical Investigations* Moscow 1959 Among the authors in addition to Zinov'ev himself were the philosophers A Kolman and P V Tavanec and the mathematicians and linguists S A Janovskaja A S Esenin Volpin S K Saumjan G N Povarov Mary B. Hesse (1924-2016): Metaphors, Models, and the Growth of Scientific Knowledge Pietro Gori, 2025-08-20 This volume explores the work of Mary B Hesse 1924-2016 a pivotal figure in twentieth century philosophy of science At a time when the foundations of an integrated approach to the history and philosophy of science were being established Hesse as a female philosopher offered a distinctive and influential contribution grounded in a post empiricist understanding of the natural sciences Central to her thought was a focus on the metaphorical and analogical value of scientific language in contrast to views assessing its literal significance Hesse also departed from traditional hypothetico deductive accounts of scientific methodology and theory structure advancing instead perspectives rooted in both historical and contemporary scientific practices To mark the centenary of her birth this book brings together an international group of scholars to re-examine and engage with Hesse's intellectual legacy The chapters address the central themes of her work and situate them within her broader philosophical context Each contribution adopts a cross disciplinary perspective highlighting the continued relevance of Hesse's ideas to current debates in the philosophy of science This volume will be of particular interest to scholars in the history and philosophy of science as well as those engaged in gender studies and the study of women in philosophy

Scientific Knowledge and Its Social Problems Jerome R. Ravetz, 2020-09-10 Science is continually confronted by new and difficult social and ethical problems Some of these problems have arisen from the transformation of the academic science of the prewar period into the industrialized science of the present Traditional theories of science are now widely recognized as obsolete In *Scientific Knowledge and Its Social Problems* originally published in 1971 Jerome R Ravetz analyzes the work of science as the creation and investigation of problems He demonstrates the role of choice and value judgment and the inevitability of error in scientific research Ravetz's new introductory essay is a masterful statement of how our understanding of science has evolved over the last two decades **Making Medical Knowledge** Miriam Solomon, 2015-04-02 How is medical knowledge made New methods for research and clinical care have reshaped the practices of medical knowledge production over the last forty years Consensus conferences evidence based medicine translational medicine and narrative medicine are among the most prominent new methods *Making Medical Knowledge* explores their origins and aims their epistemic strengths and their epistemic weaknesses Miriam Solomon argues that the familiar dichotomy between the art and the science of medicine is not adequate for understanding this plurality of methods The book begins by tracing the development of medical consensus conferences from their beginning at the United States National Institutes of Health in 1977 to their widespread adoption in national and international contexts It discusses consensus conferences as social epistemic institutions designed to embody democracy and achieve objectivity Evidence based medicine which developed next

ranks expert consensus at the bottom of the evidence hierarchy thus challenging the authority of consensus conferences Evidence based medicine has transformed both medical research and clinical medicine in many positive ways but it has also been accused of creating an intellectual hegemony that has marginalized crucial stages of scientific research particularly scientific discovery Translational medicine is understood as a response to the shortfalls of both consensus conferences and evidence based medicine Narrative medicine is the most prominent recent development in the medical humanities Its central claim is that attention to narrative is essential for patient care Solomon argues that the differences between narrative medicine and the other methods have been exaggerated and offers a pluralistic account of how the all the methods interact and sometimes conflict The result is both practical and theoretical suggestions for how to improve medical knowledge and understand medical controversies Foreign Social Science Bibliographies United States. Bureau of the Census,1961 At the Deathbed of Darwinism: A Series of Papers Eberhard Dennert,2019-12-09 In *At the Deathbed of Darwinism A Series of Papers* Eberhard Dennert presents a compelling critique of Darwinian evolution challenging its foundational principles and offering an alternative

perspective rooted in design and purpose Employing a scholarly tone Dennert engages with scientific literature and philosophical arguments weaving a narrative that reflects the intellectual debates of the early 20th century This collection of essays employs a meticulous examination of both biological evidence and theological implications positioning itself within the broader context of the science religion discourse as he seeks to dismantle the prevailing evolutionary paradigm Eberhard Dennert a passionate advocate for creationism was influenced by the theological upheavals and scientific advancements of his time His background in natural sciences intertwines with a deep seated commitment to exploring the intersection between faith and science Dennert s scholarly pursuits including his involvement in various debates on evolution culminate in a work that is both a testament to his convictions and a reflection of the contentious atmosphere surrounding the Darwinian theory at the time For readers interested in the debates surrounding evolution and creationism Dennert s *At the Deathbed of Darwinism* offers an insightful and critical resource It invites thoughtful consideration of the tensions between faith and science making it a valuable addition for scholars students and anyone intrigued by the ongoing discourse of human origins
