Skylar Isaac has loved penguins since she was about four years old. She grew up knowing many fun things about penguins and had always wanted to learn more and teach her friends. Learning about penguins has been a passion of Skylar's ever since she discovered more than one penguin species. She first noticed there were different breeds of penguins since childhood by watching movies and playing video games. Even in junior high, Skylar had a love for penguins that never seemed to die down. Her passion for penguins only grew fonder the more she learned about penguins as a whole and the individual species. Skylar hopes that writing this guide will educate people and entertain them with new lessons about penguins that they may never have known in the past. She is now a freelance writer who hopes to captivate people to use their imagination and see themselves in each fascinating story and informative guide through her writing.

Who Killed the Great Auk? Jeremy Gaskell, 2000. Who Killed the Great Auk takes us on a tour of some of the wildest and most remote communities on earth. We travel with Audubon to Labrador, sail to the remote Scottish island of St Kilda, experience the hardship of life in the Newfoundland colonies, and follow the peregrinations of intrepid naturalists as they put to sea in search of the very last of the Great Auk. Jacket *On the Wing* David E. Alexander, 2015-09-02. Ask anybody what superpower they wished to possess and odds are the answer just might be the ability to fly. What is it about soaring through the air, held up by the power of one's own body that has captivated humans for so long? David Alexander examines the evolution of flight in the only four animals to have evolved this ability: insects, pterosaurs, birds, and bats. With an accessible writing style grounded in rigorous research, Alexander breaks new ground in a field that has previously been confined to specialists. While birds have received the majority of attention from flight researchers, Alexander pays equal attention to all four groups of flyers, something that no other book on the subject has done before now. In a streamlined and captivating way, David Alexander demonstrates the links between the tiny 2 mm thrip and the enormous albatross with the 12 foot wingspan used to cross oceans. The book delves into the fossil record of flyers enough to satisfy the budding paleontologist while also pleasing ornithologists and entomologists alike with its treatment of animal behavior, flapping mechanisms, and wing origin theory. Alexander uses relatable examples to draw in readers even without a natural interest in birds, bees, and bats. He takes something that is so off limits and unfamiliar to humans, the act of flying, and puts it in the context of experiences that many readers can relate to. Alexander guides readers through the anomalies of the flying world: hovering hummingbirds, unexpected gliders, squirrels, for instance, and the flyers that went extinct: pterosaurs. Alexander also delves into wing origin theory and explores whether birds entered the skies from the trees down as gliders or from the ground up as runners, and uses the latest fossil evidence to present readers with an answer.
