**People and Computers** John F. Vinsonhaler, Christian C. Wagner, Castelle G. Gentry, 1989-01-01 Barriers and Biases in Computer-Mediated Knowledge Communication Rainer Bromme, Friedrich W. Hesse, Hans Spada, 2006-03-30 We report a study of one aspect of the changing industrial landscape the use of virtual team working in the supply chain The supply chain is the group of companies that are involved in the design and manufacture and distribution of products notably complex products such as cars Supply chain partnerships often involve cross company team working and as members of such teams are rarely collocated virtual team working supported by IT offers considerable potential benefits Companies hope that these technologies can be used to support distributed computer supported collaborative working for purposes such as concurrent engineering and it is this kind of virtual teaming which we decided to investigate We believe that exploring how virtual teams communicate is an effective way of examining how well they are operating and identifying the impacts of the technologies on their interactions In the workplace free and open communication is considered to be very important to organizations facing a rapidly changing business environment Similarly free and equal communication among members has been reported to be important if genuine team working is to be implemented in the workplace Carletta et al 1998 If organizations are to derive benefits such as innovative problem solving from virtual team working then such open communication seems desirable Communications technologies such as videoconferencing shared applications etc clearly offer the possibilities of such communications among geographically distributed or virtual teams

**Computer-Based Learning Environments and Problem Solving** Erik De Corte, Marcia C. Linn, Heinz Mandl, Lieven Verschaffel, 2013-06-29 Most would agree that the acquisition of problem solving ability is a primary goal of education The emergence of the new information technologies in the last ten years has raised high expectations with respect to the possibilities of the computer as an instructional tool for enhancing students problem solving skills This volume is the first to assemble review and discuss the theoretical methodological and developmental knowledge relating to this topical issue in a multidisciplinary confrontation of highly recommended experts in cognitive science computer science educational technology and instructional psychology Contributors describe the most recent results and the most advanced methodological approaches relating to the application of the computer for encouraging knowledge construction stimulating higher order thinking and problem solving and creating powerful learning environments for pursuing those objectives The computer applications relate to a variety of content domains and age levels

*The Design of Computer Supported Cooperative Work and Groupware Systems* Dan Shapiro, Michael Tauber, Roland Traunmüller, 1996-03-29 The phrases the information superhighway and the information society are on almost everyone's lips CSCW and groupware systems are the key to bringing those phrases to life To an extent that would scarcely have been imaginable a few years ago the contributions in this volume speak to each other and to a broader interdisciplinary context The areas of ethnography and design the requirements and principles of CSCW design

CSCW languages and environments and the evaluation of CSCW systems are brought together to bring to light how activities in working domains are really in practice carried out The aim above all is to do justice to the creativity and versatility of those whose work they aim to support *Peer Interactions in Computer Mediated Problem Solving Activities* Elizabeth Maughan McCullough,1994

**Knowledge Games** Karen Schrier,2016-06-15 Are games the knowledge producers of the future Imagine if new knowledge and insights came not just from research centers think tanks and universities but also from games of all things Video games have been viewed as causing social problems but what if they actually helped solve them This question drives Karen Schrier s Knowledge Games which seeks to uncover the potentials and pitfalls of using games to make discoveries solve real world problems and better understand our world For example so called knowledge games such as Foldit a protein folding puzzle game SchoolLife which crowdsources bullying interventions and Reverse the Odds in which mobile game players analyze breast cancer data are already being used by researchers to gain scientific psychological and humanistic insights Schrier argues that knowledge games are potentially powerful because of their ability to motivate a crowd of problem solvers within a dynamic system while also tapping into the innovative data processing and computational abilities of games In the near future Schrier asserts knowledge games may be created to understand and predict voting behavior climate concerns historical perspectives online harassment susceptibility to depression or optimal advertising strategies among other things In addition to investigating the intersection of games problem solving and crowdsourcing Schrier examines what happens when knowledge emerges from games and game players rather than scientists professionals and researchers This accessible book also critiques the limits and implications of games and considers how they may redefine what it means to produce knowledge to play to educate and to be a citizen

**Human and Machine Problem Solving** K.J. Gilhooly,2012-12-06 Problem solving is a central topic for both cognitive psychology and artificial intelligence AI Psychology seeks to analyze naturally occur ring problem solving into hypothetical processes while AI seeks to synthesize problem solving performance from well defined processes Psychology may suggest possible processes to AI and in turn AI may suggest plausible hypotheses to psychology It should be useful for both sides to have some

idea of the other's contribution hence this book which brings together overviews of psychological and AI research in major areas of problem solving At a more general level this book is intended to be a contribution toward comparative cognitive science Cognitive science is the study of intelligent systems whether natural or artificial and treats both organisms and computers as types of information processing systems Clearly humans and typical current computers have rather different functional or cognitive architectures Thus insights into the role of cognitive architecture in performance may be gained by comparing typical human problem solving with efficient machine problem solving over a range of tasks Readers may notice that there is little mention of connectionist approaches in this volume This is because at the time of writing such approaches have had little or no impact on research at the problem solving level Should a similar volume be produced in ten years or so of course a very different story may need to be told

**Designing Cognitive Cities** Edy Portmann, Marco E.

Tabacchi, Rudolf Seising, Astrid Habenstein, 2018-09-18 This book illustrates various aspects and dimensions of cognitive cities Following a comprehensive introduction the first part of the book explores conceptual considerations for the design of cognitive cities while the second part focuses on concrete applications The contributions provide an overview of the wide diversity of cognitive city conceptualizations and help readers to better understand why it is important to think about the design of our cities The book adopts a transdisciplinary approach since the cognitive city concept can only be achieved through cooperation across different academic disciplines e.g. economics computer science mathematics and between research and practice More and more people live in a growing number of ever larger cities As such it is important to reflect on how cities need to be designed to provide their inhabitants with the means and resources for a good life The cognitive city is an emerging innovative approach to address this need

**Computer Supported Collaborative Learning 2005** Timothy

Koschmann, 2017-10-03 The Computer Supported Collaborative Learning CSCL conference has become an internationally recognized forum for the exchange of research findings related to learning in the context of collaborative activity and the exploration of how such learning might be augmented through technology This text is the proceedings from CSCL 2005 held in Taipei Taiwan This conference marked the 10th anniversary of the first CSCL Conference held at Indiana University in 1995 Subsequent meetings have been held at the University of Toronto Stanford University University of Maastricht Netherlands University of Colorado at Boulder and the University of Bergen Norway Just as the first CSCL conference was instrumental in shaping the trajectory of the field in its first decade the conference in Taipei will play an important role in consolidating an increasingly international and interdisciplinary community and defining the direction of the field for the next 10 years This volume and the papers from which it is comprised will be an important resource for those active in this area of research and for others interested in fostering learning in settings of collaboration
