People And Pixels:

People and Pixels National Research Council, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Committee on the Human Dimensions of Global Change, 1998-05-21 Space based sensors are giving us an ever closer and more comprehensive look at the earth's surface they also have the potential to tell us about human activity This volume examines the possibilities for using remote sensing technology to improve understanding of social processes and human environment interactions Examples include deforestation and regrowth in Brazil population environment interactions in Thailand ancient and modern rural development in Guatemala and urbanization in the United States as well as early warnings of famine and disease outbreaks The book also provides information on current sources of remotely sensed data and metadata and discusses what is involved in establishing effective collaborative efforts between scientists working with remote sensing technology and those working on social and environmental issues

People and Pixels National Research Council (U.S.). Committee on the Human Dimensions of Global Change, 1996 **Fun with Algorithms** Evangelos Kranakis, DANNY KRIZANC, Flaminia Luccio, 2012-05-31 This book constitutes the refereed proceedings of the 6th International Conference FUN 2012 held in June 2012 in Venice Italy The 34 revised full papers were carefully reviewed and selected from 56 submissions They feature a large variety of topics in the field of the use design and analysis of algorithms and data structures focusing on results that provide amusing witty but nonetheless original and scientifically profound contributions to the area

Land Change Science Garik Gutman, Anthony C. Janetos, Christopher O. Justice, Emilio F. Moran, John F. Mustard, Ronald R. Rindfuss, David Skole, Billy Lee Turner II, Mark A. Cochrane, 2012-03-24 This volume is a synthesis of the NASA funded work under the Land Cover and Land Use Change Program Hundreds of scientists have worked for the past eight years to understand one of the most important forces that is changing our planet human impacts on land cover that is land use Its contributions span the natural and the social sciences and apply state of the art techniques for understanding the earth satellite remote sensing geographic information systems modeling and advanced computing It brings together detailed case studies regional analyses and globally scaled mapping efforts This is the most organized effort made to understand the dominant force that has been responsible for changing the Earth's biosphere

Audience This publication will be of interest to students scientists and policy makers This volume includes a CD ROM containing full color images of a selection of illustrations which are printed in black and white in the book **Cooperative Studies Between the United States of America and the People's Republic of China on Applications of Remote Sensing to Surveying and Mapping** Donald T. Lauer, Liangcai Chu, 1992 **Practical handbook for agricultural land**

cover mapping in the Lao People's Democratic Republic Food and Agriculture Organization of the United Nations, Ministry of Agriculture and Forestry, Lao People's Democratic Republic, 2020-09-01 This handbook presents the detailed steps for national agricultural land cover mapping conducted with limited resources and budget from design to final

validation and production It covers the technical aspects of 1 selection and preprocess of satellite imagery both optical and radar 2 definition of a land cover legend using international standards 3 the integration with other existing information as well as the analysis of such database in order to assign a thematic classification 4 the interpretation 5 the accuracy assessment and 6 the final packaging and publication of results The handbook focuses on mapping agricultural land in a complex landscape such as the one found in Lao PDR where atmospheric conditions topographic effects and management makes the classification challenging The handbook also presents practical examples of the team software and skill set required to develop a national land cover dataset The objective of the document is to provide a working manual to other national teams willing to develop a land cover mapping programme

An individual-centered approach to visualize people's opinions and demographic information Wanda Baltzer, Theresa Hradilak, Lara Pfennigschmidt, Luc Maurice Prestin, Moritz Spranger, Simon Stadlinger, Leo Wendt, Jens Lincke, Patrick Rein, Luke Church, Robert Hirschfeld, 2021-11-05 The noble way to substantiate decisions that affect many people is to ask these people for their opinions For governments that run whole countries this means asking all citizens for their views to consider their situations and needs Organizations such as Africa's Voices Foundation who want to facilitate communication between decision makers and citizens of a country have difficulty mediating between these groups To enable understanding statements need to be summarized and visualized Accomplishing these goals in a way that does justice to the citizens voices and situations proves challenging Standard charts do not help this cause as they fail to create empathy for the people behind their graphical abstractions Furthermore these charts do not create trust in the data they are representing as there is no way to see or navigate back to the underlying code and the original data To fulfill these functions visualizations would highly benefit from interactions to explore the displayed data which standard charts often only limitedly provide To help improve the understanding of people's voices we developed and categorized 80 ideas for new visualizations new interactions and better connections between different charts which we present in this report From those ideas we implemented 10 prototypes and two systems that integrate different visualizations We show that this integration allows consistent appearance and behavior of visualizations The visualizations all share the same main concept representing each individual with a single dot To realize this idea we discuss technologies that efficiently allow the rendering of a large number of these dots With these visualizations direct interactions with representations of individuals are achievable by clicking on them or by dragging a selection around them This direct interaction is only possible with a bidirectional connection from the visualization to the data it displays We discuss different strategies for bidirectional mappings and the trade offs involved Having unified behavior across visualizations enhances exploration For our prototypes that includes grouping filtering highlighting and coloring of dots Our prototyping work was enabled by the development environment Lively4 We explain which parts of Lively4 facilitated our prototyping process Finally we evaluate our approach to domain problems and our developed visualization concepts Our work provides inspiration and a starting point for

visualization development in this domain Our visualizations can improve communication between citizens and their government and motivate empathetic decisions Our approach combining low level entities to create visualizations provides value to an explorative and empathetic workflow We show that the design space for visualizing this kind of data has a lot of potential and that it is possible to combine qualitative and quantitative approaches to data analysis **Urban Remote**
