The People's Right To Know Frederick Williams, John V. Pavlik, 2013-09-13 This important volume presents the pros and cons of a national service that will meet the information needs and wants of all people In the preface Everette E Dennis Executive Director of The Freedom Forum Media Studies Center asks What will a true information highway where most citizens enjoy a wide range of information services on demand do to local communities government and business entities other units of society and democracy itself It is no longer a question of whether a vastly expanded information highway will be built in America Telephone and cable companies have already inaugurated their plans and government will most likely incorporate such plans into the economic development policy of the late 1990s The key questions remaining are Who will pay for it and Whom exactly will it serve The People's Right to Know suggests that serving the everyday citizen should be the main objective of any national initiatives in this area It counsels that evolving electronic services are new communications media that should be deployed with a main focus on the public's needs interests and desires If advances in the nation's public telephone network will make information services as easy to use as ordinary voice calls or newspapers promise vast new electronic services awaiting their readers more attention must also be devoted to the information needs and wants of everyday citizens In our increasingly multicultural and technology driven society enormous inequities exist across America's socioeconomic classes regarding access to information critical to everyday life If an information highway is to be effective we need to ensure that all Americans have access to it its design must start with the everyday citizen This powerful new medium at our disposal must consider policy that includes attempts to close the information gap among our citizens It must ensure equal access to data regarding job education and health information services legal information on such topics as immigration and transactional services that offer assistance on such routine but time consuming tasks as renewing a driver's license or registering to vote Media and telecommunications professionals communication scholars and policymakers including two former chairmen of the Federal Communications Commission provide insights and pointed commentary on the nature and shape of an information highway designed as a new public medium aimed at serving a wide range of public needs Their work should improve our basis for deciding if there are means by which an enhanced public telecommunications network can benefit the everyday working American

The People's Right to Know Frederick Williams, John Vernon Pavlik, 1994 This important volume presents the pros and cons of a national service that will meet the information needs and wants of all people In the preface Everette E Dennis Executive Director of The Freedom Forum Media Studies Center asks What will a true information highway where most citizens enjoy a wide range of information services on demand do to local communities government and business entities other units of society and democracy itself It is no longer a question of whether a vastly expanded information highway will be built in America Telephone and cable companies have already inaugurated their plans and government will most likely incorporate such plans into the economic development policy of the late 1990s The key

questions remaining are Who will pay for it and Whom exactly will it serve The People's Right to Know suggests that serving the everyday citizen should be the main objective of any national initiatives in this area It counsels that evolving electronic services are new communications media that should be deployed with a main focus on the public's needs interests and desires If advances in the nation's public telephone network will make information services as easy to use as ordinary voice calls or newspapers promise vast new electronic services awaiting their readers more attention must also be devoted to the information needs and wants of everyday citizens In our increasingly multicultural and technology driven society enormous inequities exist across America's socioeconomic classes regarding access to information critical to everyday life If an information highway is to be effective we need to ensure that all Americans have access to it its design must start with the everyday citizen This powerful new medium at our disposal must consider policy that includes attempts to close the information gap among our citizens It must ensure equal access to data regarding job education and health information services legal information on such topics as immigration and transactional services that offer assistance on such routine but time consuming tasks as renewing a driver's license or registering to vote Media and telecommunications professionals communication scholars and policymakers including two former chairmen of the Federal Communications Commission provide insights and pointed commentary on the nature and shape of an information highway designed as a new public medium aimed at serving a wide range of public needs Their work should improve our basis for deciding if there are means by which an enhanced public telecommunications network can benefit the everyday working American

21st Century Communication: A Reference Handbook William F. Eadie, 2009-05-15 The discipline of communication has grown in popularity from the time professors of journalism and speech decided in the mid 1960s that the term communication was an excellent general descriptor for the theory and research that each group aspired to create Over time the two groups grew closer and recognized significant overlap in their theoretical and research interests but there were also differences in their traditions that kept them apart While both groups agreed that communication is a practical discipline journalism professors focused a great deal of their attention on the education of media professionals Speech professors on the other hand often were more oriented to the liberal arts and valued the fact that communication could be approached from a variety of traditions including the arts humanities social sciences and even the sciences A key term in 21st Century communication however is convergence Not only are media and technology converging with each other to produce new means of communicating but individuals are increasingly using both new and existing communication tools to create new forms of communication This convergence forces the various camps within the

communication discipline to draw upon each other's theories and research methods to keep up with explaining the rapidly changing communication environment. This convergence of ideas and theories provides a space to challenge conventional ways of thinking about the communication discipline and that's the goal of the SAGE 21st Century Reference Series volumes on Communication. General Editor William F. Eadie has sought to honor the diversity of the study of communication but also integrate that diversity into a coherent form, dividing communication study into four basic properties: 1 processes, 2 forms and types of communication, 3 characteristics to consider in creating messages, and 4 relationships between communicators. Via 100 chapters, this 2-volume set, available in both print and electronic formats, highlights the most important topics, issues, questions, and debates any student obtaining a degree in the field of communication ought to have mastered for effectiveness in the 21st Century. The purpose is to provide undergraduate majors with an authoritative reference source that will serve their research needs going forward in this exciting field with more detailed information than encyclopedia entries but not as much jargon, detail, or density as a journal article or a research handbook chapter. Comprehensive coverage captures all the major themes and subfields within communication. For instance, Volume 1 themes include the discipline of communication, approaches to the study of communication, key processes of communication, forms and types of communication, key characteristics of messages, key communication relationships, factors affecting communication, and challenges and opportunities for communication. Themes in Volume 2 are media as communication, communication as a profession, journalism, public relations, advertising, and media management. Authoritative content is provided by a stellar cast of authors who bring diverse approaches, diverse styles, and different points of view. Curricular-driven emphasis provides students with initial footholds on topics of interest in researching for term papers, in preparing for GREs, in consulting to determine directions to take in pursuing a senior thesis, graduate degree, career, etc. Uniform chapter structures make it easy for students to locate key information with a more or less common chapter format of Introduction, Theory, Methods, Applications, Comparisons, Future Directions, Summary, Bibliography, Suggestions for Further Reading, and Cross References. Availability in print and electronic formats provides students with convenient, easy access.
