Sever, 2012-12-06 This is a Festschrift to Professor Sir Stanley Peart Professor of Medicine at St Mary's Hospital and Medical School University of London since 1956 who has influenced and directed many of us in the better understanding of the pathophysiological basis and the clinical practice of hypertension It commemorates and we hope will preserve memories of a special occasion when we met to honour him at the Castella de Pomeiro Como Italy At this meeting his extended family pictured above shared experiences discussed current scientific and clinical approaches in hypertension research and indulged in reminiscences of their exciting times on his Unit at St Mary's We particularly hope that this volume will illustrate the multifaceted approach needed in investigating and managing hypertension and that it will additionally remind Sir Stanley of the admiration and warm affection with which he has been and will always continue to be regarded Christopher J Mathias Peter S Sever

Introduction P S Sever Welcome to Castello de Pomerio for what I feel sure is to be a very special occasion As all of you know Stan Peart is retiring after 31 years as professor and head of the department of Medicine at St Mary's and after nearly 40 years of distinguished research in basic and clinical science related to the cardiovascular system the kidney and particularly to hypertension Radioimmunoassay in Basic and Clinical Pharmacology Carlo Patrono, Bernhard A. Peskar, 2012-12-06

Thirty years have elapsed since the first description by S A BERSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present in body fluids at concentrations as low as 10^{-10} M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of

Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators The History of Clinical Endocrinology: A Comprehensive Account of Endocrinology from Earliest Times to the Present Day V.C. Medvei,1993-01-15 The definitive reference work this book combines detailed scientific accuracy with a classical style erudition and an appealing presentation It covers the past present and future trends in endocrinology and includes biographies of major figures It provides chronological tables and name and subject indexes that make the information easily accessible

Radioimmunoassays for Insulin, C-Peptide and Proinsulin L. Heding,2012-12-06 THE DISCOVERY OF INSULIN C PEPTIDE AND PROINSULIN SPECIES DIFFERENCES Crude insulin was extracted and isolated from dog pancreases removed 7 1 weeks after ligation of the pancreatic duct for the first time in 1921 by Banting and Best Its lifesaving properties were subsequently documented in pancreatectomized dogs in 1922 Only about six months elapsed from its discovery until systematic collection of calf and ox pancreases and later porcine pancreases was established and the blood glucose lowering effect in diabetics using the crude extract from these glands proven It was not until 1960 however that the primary structure of all three species of insulin 107 human porcine and bovine was elucidated It then became evident that the differences between bovine porcine and human insulin amounted to at most 3 amino acids These apparently small differences have a significant impact on the physico chemical characteristics of the three insulins which again affect e g the rate of absorption of insulin 109 preparations from the subcutaneous tissue and their immunogenicity i e **Protein Arrays, Biochips and Proteomics** Joanna S. Albala,Ian Humphery-Smith,2003-08-20 From disease marker identification to accelerated drug development Protein Arrays Biochips and Proteomics offers a detailed overview of current and emerging trends in the field of array based proteomics This reference focuses on innovations in protein microarrays and biochips mass spectrometry high throughput protein expression protein protein interactions structural proteomics and the proteomic marketplace for comprehensive understanding of past present and future proteomic research Offering an abundance of figures and charts the book compiles a wide variety of technologies and applications ranging from functionalized chip surfaces to strategies for protein expression **Delivery Systems for Peptide Drugs** S.S. Davis,Lisbeth Illum,E. Tomlinson,2013-11-11 Recent years have seen enormous advances in the field of protein and peptide engineering and a greater understanding in the way in which biological response modifiers function in the body It is now possible through the use of recombinant DNA techniques or by solid phase protein synthesis to produce significant quantities of a wide variety of regulatory agents that are therapeutically applicable The list of these response modifiers expands almost daily to include interferons macrophage activation factors neuropeptides and agents that may have potential in cardiovascular disease inflammation contraception etc Prospects to use some of these materials in medicine have reached the stage where products have either been approved by regulatory authorities or are the subject of applications as investigatory drugs or as new therapeutic agents In some uses the

pertinent agent will be administered on an acute basis in the form of a simple injection as for example the use of a tissue plasminogen activator for the treatment of coronary infarct In other cases regulatory proteins and peptides are indicated for chronic therapy and here they will need to be administered by an appropriate delivery system Unfortunately the research on delivery systems for peptides and proteins has not kept pace with the rapid progress in biotechnology and consequently there are presently few systems that are entirely appropriate for the administration of macromolecular drugs according to complex dosage regimens eg intermittent and pulsed therapy Furthermore essential pharmacokinetic and pharmacodynamic data may be missing *Hormonal Proteins and Peptides* Choh Hao Li,1973 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1971 First multi year cumulation covers six years 1965 70

Secretin, Cholecystokinin, Pancreozymin and Gastrin J. Erik Jorpes,Viktor Mutt,2013-06-29 In the beginning of this century physiology witnessed the creation of a new concept the hormonal regulation of the work of the digestive organs It was found that such essential functions as the flow of pancreatic juice and emptying of bile into the intestine were regulated by two hormones secretin and cholecystokinin respectively Already in 1925 French authors attempted to measure the functional capacity of the exocrine pancreas by means of stimulation with secretin The usefulness of the secretin test in this connection was definitely established by Scandinavian workers in the 1930 s In spite of the difficulties in obtaining secretin American authors succeeded in keeping the interest in the secretin test alive The development in the 1950 s of counter current ion exchange and chromatographic techniques offered new possibilities in this field The intestinal hormones were known to be relatively low molecular peptides and these could now be isolated in pure form Thus secretin was isolated in 1961 and cholecystokinin in 1964 The newly developed methods for peptide analysis likewise soon brought us full information about the primary structure of the peptides Gastrin the specific stimulant of the gastric acid secretion which was discovered in 1905 and acknowledged as a hormone in 1938 was the first of the gastrointestinal hormones for which the structure became known This was in 1964 Synthesis soon followed These developments are reviewed in the first chapter of the present volume
