Peptides In Oncology 3 Somatostatin And Lhrh Analogues:

Peptides in Oncology III K. Höffken, R. Kath, 2012-12-06 Interference with protein mediated intra and intercellular pathways has become a major goal of preclinical and clinical research A rapidly increasing number of peptides are known to be responsible for endo para and autocrine signal transduction These peptides and their receptors have been studied with regard to their cell growth stimulatory action and their impact on differentiation In parallel peptide antagonists are being investigated in terms of their potential role in preclinical and clinical application Thus biotherapy might improve the clinical outcome of patients with tumors that respond to the respective hormonal manipulation Among the numerous peptides of interest somatostatin somatotropin release inhibitory factor and the luteinizing hormone releasing hormone LH RH have been the topic of intensive research during recent years In this third volume of peptides in oncology experts in the field extensively review and update the mechanisms of action of somatostatin and LH RH analogues in oncology Somatostatin and its various short and long acting analogues have the unique feature of suppressing and inhibiting a wide range of cellular processes including cell proliferation Receptors for these peptides which belong to the family of neuropeptides or neurotransmitters are widely distributed a feature which is not in keeping with the general view of a growth hormone regulatory system LH RH analogues play an established role in curative adjuvant and palliative treatment of hormone sensitive tumors

Peptides and Non Peptides of Oncologic and Neuroendocrine Relevance E.E. Müller, 2012-12-06 Describes the ability of a series of endocrine derived compounds i.e. CRRH LHRH somatostatin anti androgens and aromatase inhibitors to exert a direct anti neoplastic activity or to potentiate the activity of traditional chemotherapeutic agents on neuroendocrine and solid tumors In addition a new class of potent GH releasers GSHs Ghrelin endowed with important endocrine and extra endocrine action is presented Therefore in addition to traditional chemotherapy characterized by high toxicity and non selective action on tumoral cells the reader can find a new approach with more selective less cytotoxic endocrine derived compounds

Radionuclide Peptide Cancer Therapy Marco Chinol, Giovanni Paganelli, 2016-04-19 Offering lower toxicity and higher accuracy than conventional therapies this source offers illustrative coverage of this new method to treat tumors associated with brain breast lung and neuroendocrine cancers Accompanied by a CD offering color images radiolabeling procedures and tips on radiopharmaceutical administration this source will offer

Peptides in Oncology I K. Höffken, 2012-12-06 Hormonal treatment of malignant diseases has been used for quite some years now and progress in this field is still being made at a steady pace The detection of new endocrine feedback loops and the availability of new classes of hormonal agents made hormonal intervention with predictable outcome possible Besides the intellectual challenge of modulating the hormone system an important aspect of recent research on hormones and cancer is the reduction of treatment related morbidity achieved with the new hormonal strategies Thus controlled intervention in the hypothalamic gonadotropic axis is increasingly apt to replace surgical removal of the relevant glands i.e. the pituitary gland or the gonads

In the same way as for example aromatase inhibitors are being used as a substitute for adrenalectomy The concept that secretion of hypothalamic gonadotropin releasing hormone GnRH pituitary gonadotropins and sex steroids are regulated via negative and positive feedback loops is based on the pioneering work of Hohlweg and Harris some 40 years ago In 1971 a breakthrough was achieved with the isolation structural analysis and synthesis of the luteinizing hormone releasing hormone LH RH or GnRH as it is now more appropriately termed since it provokes the secretion of both gonadotropins LH and FSH and since then the progress made in this area of research has been remarkable Both agonists and antagonists of LH RH have been synthesized and extensively studied in preclinical and clinical settings Peptides in Oncology III K.
