Perception and Cognition at Century's End Julian Hochberg, 1998-09-22 Perception and Cognition at Century's End contains cognitive psychology surveys that are up to date and historically based as well as references to the development of cognitive psychology over the past century The book can serve as a central or specialized text for a range of psychology courses Written by prominent active researchers in the field Presents broad coverage of perception and cognition Considers perception and cognition in the context of the thought of the past half century Contains extensive references excellent resource

Looking Into Pictures Heiko Hecht, Robert Schwartz, Margaret Atherton, 2003 In this text philosophers psychologists and art historians explore the implications of theories of vision for our understanding of the nature of pictorial representation and picture perception

Psychological Concepts Kurt Pawlik, Gery d'Ydewalle, 2020-08-13 Among the scientific advances over the last one hundred years those in psychological science rank among the most prolific and revealing The analyses of human intelligence and cognition of human consciousness and self awareness of human memory and learning and of human personality structure have opened up new avenues towards a deeper understanding of the human nature the human mind and its evolution These new insights whilst meeting high standards of research methodology have also given rise to a conceptual grid which connects hitherto divergent lines of research in the human and behavioral sciences leading up to present day neuroscience The Editors both past presidents of the International Union of Psychological Science IUPsyS bring together a distinguished panel of international experts in the attempt to unravel in a comparative cross cultural and historical approach changing contents and functions of psychological key concepts such as intelligence cognition mind and the self Their findings help to guide psychological theorizing psychological experimentation and field research and in so doing they apply behavioral science insights to the improvement of human affairs Prepared under the aegis of the International Union of Psychological Science the book exemplifies a concept driven international history of psychological science With its team of distinguished researchers from four continents Psychological Concepts An International Historical Perspective outlines the history of psychology in a truly innovative way

Neuromimetic Semantics Harry Howard, 2010-08-10 This book attempts to marry truth conditional semantics with cognitive linguistics in the church of computational neuroscience To this end it examines the truth conditional meanings of coordinators quantifiers and collective predicates as neurophysiological phenomena that are amenable to a neurocomputational analysis Drawing inspiration from work on visual processing and especially the simple complex cell distinction in early vision V1 we claim that a similar two layer architecture is sufficient to learn the truth conditional meanings of the logical coordinators and logical quantifiers As a prerequisite much discussion is given over to what a neurologically plausible representation of the meanings of these items would look like We eventually settle on a representation in terms of correlation so that for instance the semantic input to the universal operators e g and all is represented as maximally correlated while the semantic input to the universal negative

operators e g nor no is represented as maximally anticorrelated On the basis this representation the hypothesis can be offered that the function of the logical operators is to extract an invariant feature from natural situations that of degree of correlation between parts of the situation This result sets up an elegant formal analogy to recent models of visual processing which argue that the function of early vision is to reduce the redundancy inherent in natural images Computational simulations are designed in which the logical operators are learned by associating their phonological form with some degree of correlation in the inputs so that the overall function of the system is as a simple kind of pattern recognition Several learning rules are assayed especially those of the Hebbian sort which are the ones with the most neurological support Learning vector quantization LVQ is shown to be a perspicuous and efficient means of learning the patterns that are of interest We draw a formal parallelism between the initial competitive layer of LVQ and the simple cell layer in V1 and between the final linear layer of LVQ and the complex cell layer in V1 in that the initial layers are both selective while the final layers both generalize It is also shown how the representations argued for can be used to draw the traditionally recognized inferences arising from coordination and quantification and why the inference of subalternacy breaks down for collective predicates Finally the analogies between early vision and the logical operators allow us to advance the claim of cognitive linguistics that language is not processed by proprietary algorithms but rather by algorithms that are general to the entire brain Thus in the debate between objectivist and experiential metaphysics this book falls squarely into the camp of the latter Yet it does so by means of a rigorous formal mathematical and neurological exposition in contradiction of the experiential claim that formal analysis has no place in the understanding of cognition To make our own counter claim as explicit as possible we present a sketch of the LVQ structure in terms of mereotopology in which the initial layer of the network performs topological operations while the final layer performs mereological operations The book is meant to be self contained in the sense that it does not assume any prior knowledge of any of the many areas that are touched upon It therefore contains mini summaries of biological visual processing especially the retinocortical and ventral what parvocellular pathways computational models of neural signaling and in particular the reduction of the Hodgkin Huxley equations to the connectionist and integrate and fire neurons Hebbian learning rules and the elaboration of learning vector quantization the linguistic pathway in the left hemisphere memory and the hippocampus truth conditional vs image schematic semantics objectivist vs

Folkbiology Douglas L. Medin, Scott Atran, 1999-06-08 The term folkbiology refers to people's everyday understanding of the biological world how they perceive categorize and reason about living kinds The study of folkbiology not only sheds light on human nature it may ultimately help us make the transition to a global economy without irreparably damaging the environment or destroying local cultures This book takes an interdisciplinary approach bringing together the work of researchers in anthropology cognitive and developmental psychology biology and philosophy of science The issues covered include Are folk taxonomies a first order approximation to classical scientific taxonomies or are they driven more

directly by utilitarian concerns How are these category schemes linked to reasoning about natural kinds Is there any nontrivial sense in which folk taxonomic structures are universal What impact does science have on folk taxonomy Together the chapters present the current foundations of folkbiology and indicate new directions in research Contributors Scott Atran Terry Kit fong Au Brent Berlin K David Bishop John D Coley Jared Diamond John Dupr Roy Ellen Susan A Gelman Michael T Ghiselin Grant Gutheil Giyoo Hatano Lawrence A Hirschfeld David L Hull Eugene Hunn Kayoko Inagaki Frank C Keil Daniel T Levin Elizabeth Lynch Douglas L Medin Julia Beth Proffitt Bethany A Richman Laura F Romo Sandra R Waxman **Visual Impact** Terence Wright,2024-11-01 From the office to domestic interiors to shops images surround us in modern life The internet has increased this visual onslaught exponentially Is there a systematic order to this seemingly endless array of pictures and depictions Looking at picture making traditions around the world the author demonstrates how schemes of depiction are ordered throughout all ages and across all cultures Drawing on a wide range of examples from painting and drawing to film photography and the Web Visual Impact analyzes the theory and practice of visual representation Pictures and images provide a cognitive context through which people can explore and understand their world They frame and shape daily life By considering the techniques and systems that inform visual displays the author examines how cultural values and traditions shape particular visual styles Drawing on the growing field of visual anthropology Visual Impact sets image making in an historical and global context and uses it as a window for exploring the human condition at a deeper level Anyone interested in the cultural role of art film the internet and interactive media will find this book an exciting and stimulating read *Consumer Happiness: Multiple Perspectives* Tanusree Dutta,Manas Kumar Mandal,2021-05-05 This book helps quench the quest of knowledge of academicians researchers and others interested in developing a complete and critical understanding of consumer happiness The relentless search of happiness by humans is sought in different ways Scientific discussion on happiness for long was considered a forte of Philosophers Other disciplines seldom delved into this But today not only science but neuroscience marketing and other varied fields have started delving into it and have developed a keen interest The book has been conceptualized on this line of thinking and thus divided into two parts The first part is customized towards understanding various perspectives of happiness and the relative importance of knowing the same The first chapter of this section is on the biological perspective of happiness The second is titled Behavioural perspective The third chapter is an attempt to elucidate the cultural perspective of the concept of happiness The fourth is on the role of technology in inducing happiness Fifth and sixth are on theories of happiness and measuring happiness respectively Knowledge about the different perspective and theories has a wide range of benefits It informs us about how the brain works interprets and reacts This theoretical understanding helps us to move beyond the trial and error methods towards a more scientific underpinning of adoption of measures that would generate long lasting happiness in consumers The second part of the book is dedicated toward understanding consumer happiness from a neuroscience perspective i e keeping consumer happy This segment has

ten chapters The first is on differentiating the concept of happiness from satisfaction The second is on sensory marketing and happiness The third deals with the store design and shelving of products to generate happiness Fourth and fifth chapters relate to persuading the consumers While the fourth chapter is on developing persuasive messages and the fifth is on subliminal messaging sixth chapter is on pricing and seventh on advertising The eighth chapter highlights the role of emotions and the ninth is on the different factors that induce happiness in consumers The last chapter is about raising some unanswered questions and food for thought for readers Together the contents of the book make for a complete understanding of the concept of happiness and how it is shaping the world of marketing Addressing the what and how of consumer happiness in the same book makes the book comprehensive

Brains as Engines of Association Dale Purves,2019-04-01 Brains as Engines of Association tackles a fundamental question in neuroscience what is the operating principle of the human brain While a similar question has been asked and answered for virtually every other human organ during the last few centuries how the brain operates has remained a central challenge in biology Based on evidence derived from vision audition speech and music much of it based on the author s own work over the last twenty years Brains as Engines of Association argues that brains operate wholly on the basis of trial and error experience encoded in neural circuitry over evolutionary and individual time This concept of neural function runs counter to current concepts that view the brain as a computing machine and research programs based on the idea that the only way to answer such questions is by reconstructing the connectivity of brains in their entirety This view also implies that the best way to understand the details of brain function is to recapitulate their history using artificial neural networks While this viewpoint has received support in the last few years from work showing that computers can win complex games the brain plays a much more complex game the game of biological survival which Purves concludes is based on trial and error experience

The Lonely Mind of God Sherman O'Brien, 2021-01-26 Current students of philosophy or armchair philosophers Want the answer to the Primordial Existential Question Why is there something rather than nothing While history has produced no shortage of attempted answers clearly none is the answer Now comes the unique perspective of acosmism to provide a complete and plausible answer After a lifetime of reflection acosmist Sherman O'Brien offers this analysis of the issues and a thoughtful reasoned answer to philosophy's most vexing question The acosmic answer requires no faith whatsoever either in supernatural or unexplained causes in fact it discourages it Acosmism rejects both traditional religion and philosophically neglectful science As a metaphysical system it is based on an epistemological insight with implications for immortality determinism ethics and ultimate purpose Reasoned wholly from the ground up its conclusion is the very meaning of existence The solution to the Omniscience Riddle becomes the key to understanding how the question is best stated and understood This book represents one person's effort to make sense of what is true and what only seems to be so Why is there something rather than nothing What is your potential role in the entirety of experience This foray into acosmism offers a path to the genuine understanding of both existence and reality Note the main text constitutes roughly two thirds of the total pages the remainder being mostly endnotes

Human Nature Explored George Mandler, 1997 What exactly is human nature Are we correct in accepting ourselves as unchangeable determined by biology or is this idea an obstacle to our cognitive emotional and evolutionary development George Mandler explores these questions from a fresh evolutionary and social perspective He examines the burgeoning field of evolutionary psychology and suggests a mid course correction Topics are approached from a variety of backgrounds drawing on relevant literature and Mandler s own research He begins with what we know about evolution and gene expression then moves on to the complex phenomena of consciousness and emotion The constraints of both nature and nurture are discussed as limiting forces on human development and natural selection is considered in the context of our social fabric which draws on both psychological and anthropological knowledge Mandler considers human difference particularly in regard to intelligence and gender and discusses the nature of human values including our need for morality and freedom The book concludes with an appraisal of human cognition and language
