Narrative Medicine Lewis Mehl-Madrona, 2007-06-11 Seeks to restore the pivotal role of the patient's own story in the healing process Shows how conventional medicine tends to ignore the account of the patient Presents case histories where disease is addressed and healed through the narrative process Proposes a reinvention of medicine to include the indigenous healing methods that for thousands of years have drawn their effectiveness from telling and listening Modern medicine with its high tech and managed care approach has eliminated much of what constitutes the art of healing those elements of doctoring that go beyond the medications prescribed The typically brief office visit leaves little time for doctors to listen to their patients though it is in these narratives that disease is both revealed and perpetuated and can be released and treated Lewis Mehl

Madrona's Narrative Medicine examines the foundations of the indigenous use of story as a healing modality. Citing numerous case histories that demonstrate the profound power of narrative in healing, the author shows how when we learn to dialogue with disease we come to understand the power of the story we tell about our illness and our possibilities for better health. He shows how this approach also includes examining our relationships to our extended community to find any underlying disharmony that may need healing. Mehl Madrona points the way to a new model of medicine, a health care system that draws its effectiveness from listening to the healing wisdom of the past and also to the present day voices of its patients.

Lexical Analysis Patrick Hanks, 2013-01-25 A lexically based corpus driven theoretical approach to meaning in language that distinguishes between patterns of normal use and creative exploitations of norms. In *Lexical Analysis* Patrick Hanks offers a wide ranging empirical investigation of word use and meaning in language. The book fills the need for a lexically based corpus driven theoretical approach that will help people understand how words go together in collocational patterns and constructions to make meanings. Such an approach is now possible. Hanks writes because of the availability of new forms of evidence: corpora, the Internet and the development of new methods of statistical analysis and inferencing. Hanks offers a new theory of language: the Theory of Norms and Exploitations (TNE) which makes a systematic distinction between normal and abnormal usage between rules for using words normally and rules for exploiting such norms in metaphor and other creative use of language. Using hundreds of carefully chosen citations from corpora and other texts, he shows how matching each use of a word against established contextual patterns plays a large part in determining the meaning of an utterance. His goal is to develop a coherent and practical lexically driven theory of language that takes into

account the immense variability of everyday usage and that shows that this variability is rule governed rather than random. Such a theory will complement other theoretical approaches to language including cognitive linguistics, construction grammar, generative lexicon theory, priming theory, and pattern grammar.
