detection of developmental problems in children whose parents are worried that their child is not developing like other children. It will be of assistance to pediatricians and pediatric neurologists in providing a developmental perspective in the diagnostic process in their work with children with chronic neurological disorders. The tests described have been standardized by the author and cover the essentials of developmental examination history including parents' views of their child's development, clinical tests of hearing, examination of visual behavior and visual acuity, observation of developing motor skills, language performance profiles in which any substantial unevenness or an overall low score may reveal a developmental problem. In practice the range of average ability is wide so a distinctive feature of this book is a standardized data base in graphical form that can be used to identify readily those children, lowest twenty percent, who warrant further specialist investigation or treatment. It is particularly relevant today when general practitioners are being directed to take an active role in such preventive work.
