Discovering Our World Paul Singh,John R. Shook,2015-04-01 Where did

everything come from Why are humans so biologically similar and why do we let small differences divide us What shall determine our destiny Paul Singh and John R Shook draw on the latest findings from the physical and biological sciences astronomy and cosmology geology and genetics and prehistory and archeology in search of answers As they lucidly and engagingly demonstrate the answers science gives about ourselves and the universe in which we live are incomparably more surprising and interesting than any mythical tale about some clash of titans or calculating creator Indeed science s proud journey of exploration and discovery is humanity s finest narrative yet about how we trusted our intelligence to find out what we really are and who we can be intrepidly going wherever the evidence led Even though science reveals that humanity may have no special place in the universe humanity is truly special because of our ability to comprehend our universe Thus this inspiring story of exploration and discovery is a celebration not only of science of science s knowledge of the world and of science s own journeys to gain that knowledge but also of ourselves

The Nature of Nature Irv Dardik,Estee Dardik Lichter,2017-05-16 Generations of researchers have failed to answer our most basic questions about nature What is everything made of How do things change and how do they work What is life In The Nature of Nature visionary scientist Irv Dardik tackles these questions by introducing his discovery of SuperWaves a singular wave phenomenon whose design generates what we experience as matter space time motion energy and order and chaos Simply put the SuperWaves principle states that the fundamental stuff of nature is waves waves waving within waves to be exact Dardik challenges the rationality of accepting a priori that the universe is made of discrete particles Instead by drawing from his own discovery of a unique wave behavior and combining it with scientific facts he shows that every single thing in existence from quantum particles to entire galaxies is waves waving in the unique pattern he calls SuperWaves The discovery of SuperWaves and the ideas behind it while profound can be intuitively grasped by every reader whether scientist or layperson Touching on everything from quantum physics to gravity to emergent complexity and thermodynamics to the origins of health and disease it shows that our health and the health of the environment and civilization depend upon our understanding SuperWaves The Nature of Nature is an absorbing account that combines Dardik's contrarian look at the history of science with philosophical discussion his own groundbreaking research and hope for the future
