Modern Language Models and Computation

Alexander Meduna, Ondřej Soukup, 2017-10-04 This textbook gives a systematized and compact summary providing the most essential types of modern models for languages and computation together with their properties and applications. Most of these models properly reflect and formalize current computational methods based on parallelism, distribution and cooperation covered in this book. As a result, it allows the user to develop, study and improve these methods very effectively. This textbook also represents the first systematic treatment of modern language models for computation. It covers all essential theoretical topics concerning them. From a practical viewpoint, it describes various concepts, methods, algorithms, techniques and software units based upon these models. Based upon them, it describes several applications in biology, linguistics and computer science. Advanced level students studying computer science, mathematics, linguistics and biology will find this textbook a valuable resource. Theoreticians, practitioners and researchers working in today's theory of computation and its applications will also find this book essential as a reference.

The Golden Age of Philosophy of Science 1945 to 2000
John Losee, 2018-12-27 This book offers the reader a guide to the major philosophical approaches to science since World War Two. Considering the bases, arguments and conclusions of the four main movements: Logical Reconstructionism, Descriptivism, Normative Naturalism and Foundationalism, John Losee explores how philosophy has both shaped and expanded our understanding of science. The volume features major figures of twentieth century science and engages with the work of previous philosophers of science including Norman Campbell, Rudolf Carnap, Ernest Nagel, Karl Popper, Richard Dawkins and John Worrall. In particular, *The Golden Age of Philosophy of Science 1945 to 2000* aims to answer the following questions: How should competing philosophies of science be evaluated? Should philosophy of science be a prescriptive discipline? Can philosophy of science achieve normative status without designating trans-historical evaluative principles? And finally, how can understanding the history of science aid us in analyzing the philosophy of science? In answering these questions, this book shows us why we understand science the way we do. *The Golden Age of Philosophy of Science 1945 to 2000* is essential reading for students and researchers working in the history and philosophy of science.

Quality Assurance and Assessment Practices in Translation and Interpreting
Huertas-Barros, Elsa, Vandepitte, Sonia, Iglesias-Fernández, Emilia, 2018-07-27 The development of translation memories and machine translation have led to new quality assurance practices where translators have found themselves checking not only human translation but also machine translation outputs. As a result, the notions of revision and interpersonal competences have gained great importance with international projects recognizing them as high priorities. *Quality Assurance and Assessment Practices in Translation and Interpreting* is a critical scholarly resource that serves as a guide to overcoming the challenge of how translation and interpreting results should be observed, given feedback and assessed. It also informs the design of new ways of evaluating students as well as suggesting criteria for professional quality control. Featuring coverage on a broad range of topics such as quality management, translation tests and competency

based assessments this book is geared towards translators interpreters linguists academicians translation and interpreting researchers and students seeking current research on the new ways of evaluating students as well as suggesting criteria for professional quality control in translation

Quality Assurance for Chemistry and Environmental Science Günther Meinrath, Petra Schneider, 2007-09-18 Metrology and its applications e.g. in chemical or food analysis or in environmental monitoring are entering our daily life This book provides a basic overview over the relevant metrological concepts like traceability ISO uncertainties or cause and effect diagrams The applications described in great detail range from progression of error type evaluation of the measurement uncertainty budget to complex applications like pH measurement or speciation calculations for aqueous solutions The consequences of a measurement uncertainty concept for chemical data are outlined for geochemical modeling applied to transport in the subsurface and to nuclear waste disposal Special sections deal with the deficits of existing thermodynamic data for these applications and with the current position of chemical metrology in respect to other quality assurance measures e.g. ISO 900x GLP European and U.S. American standards

Risk Assessment and Risk-Driven Quality Assurance Jürgen Großmann, Michael Felderer, Fredrik Seehusen, 2017-04-21 This book constitutes the thoroughly refereed conference proceedings of the Fourth International Workshop on Risk Assessment and Risk Driven Quality Assurance RISK 2016 held in conjunction with ICTSS 2016 in Graz Austria in October 2016 The revised 9 full papers were carefully reviewed and selected from 11 submissions They focus on research studying developing and evaluating innovative techniques tools languages and methods risk assessment and risk driven quality engineering The papers are organized topical sections security risk management security risk analysis risk based testing

Macroeconomics as a Second Language Martha L. Olney, 2011-08-24 Macroeconomics as a Second Language a new volume in Wiley's bestselling As a Second Language series is a study and review guide for students taking principles of macroeconomics courses or for any student who needs a review of fundamental concepts A professor of the course for more than a decade Olney combines her insights and experience in the classroom into this concise and accessible text

Natural Language Semantics Brendan S. Gillon, 2019-03-12 An introduction to natural language semantics that offers an overview of the empirical domain and an explanation of the mathematical concepts that underpin the discipline This textbook offers a comprehensive introduction to the fundamentals of those approaches to natural language semantics that use the insights of logic Many other texts on the subject focus on presenting a particular theory of natural language semantics This text instead offers an overview of the empirical domain drawn largely from standard descriptive grammars of English as well as the mathematical tools that are applied to it Readers are shown where the concepts of logic apply where they fail to apply and where they might apply if suitably adjusted The presentation of logic is completely self contained with

concepts of logic used in the book presented in all the necessary detail This includes propositional logic first order predicate logic generalized quantifier theory and the Lambek and Lambda calculi The chapters on logic are paired with chapters on English grammar For example the chapter on propositional logic is paired with a chapter on the grammar of coordination and subordination of English clauses the chapter on predicate logic is paired with a chapter on the grammar of simple independent English clauses and so on The book includes more than five hundred exercises not only for the mathematical concepts introduced but also for their application to the analysis of natural language The latter exercises include some aimed at helping the reader to understand how to formulate and test hypotheses

Harmonic Analysis in Phase Space.

(AM-122), Volume 122 Gerald B. Folland, 2016-03-02 This book provides the first coherent account of the area of analysis that involves the Heisenberg group quantization the Weyl calculus the metaplectic representation wave packets and related concepts This circle of ideas comes principally from mathematical physics partial differential equations and Fourier analysis and it illuminates all these subjects The principal features of the book are as follows a thorough treatment of the representations of the Heisenberg group their associated integral transforms and the metaplectic representation an exposition of the Weyl calculus of pseudodifferential operators with emphasis on ideas coming from harmonic analysis and physics a discussion of wave packet transforms and their applications and a new development of Howe's theory of the oscillator semigroup

Linguistic and Psycholinguistic Approaches on Implicatures and Presuppositions

Salvatore Pistoia-Reda, Filippo Domaneschi, 2017-05-03 This book discusses developments in the study of implicatures and presuppositions drawing on recent linguistic and psycholinguistic literature It provides original discussions of specific formal aspects of the theoretical reconstruction of these phenomena The authors offer innovative experimental analyses in which crucial processing questions are addressed and new experimental methodologies are introduced The result is an advanced debate featuring broad empirical coverage of the issues as well as an informed discussion of the connections between a Compositional Semantics and a Pragmatic Theory of Implicit Communication in light of the empirical data coming from Experimental Semantics and Pragmatics This book will be a worthwhile read for those with interests in both the formal and methodological aspects of these arguments
