Congress. Office of Technology Assessment, 1990 Critical Connections Lee Riedinger, Allen Ekkebus, William Bugg, D. Ray Smith, 2024-06-11 The bombing of Pearl Harbor set off a chain of events that included the race to beat German scientists to build the atomic bomb A tiny hamlet tucked away in the southern Appalachians proved an unlikely linchpin to win the race The Manhattan Project required the combination of four secret sites Clinton Laboratories Y 12 K 25 and S 50 75 000 workers and the nation's finest scientists to create the Secret City Oak Ridge From the beginning the effort was aided by the nearby University of Tennessee which provided expertise to make the weapon possible Following World War II it was not clear what role this huge research and development program would play but pioneering scientists and administrators were determined that one option dismantling the whole thing would not happen *Critical Connections* chronicles how Oak Ridge National Laboratory ORNL the Y 12 National Security Complex and their partners became outstanding examples of the military industrial educational complex from the Cold War to the present day At the beginning of the 1950s Oak Ridge became a flourishing less secret city and the authors show how decade by decade ORNL became the source of major breakthroughs in physics biology computing and other fields and how these achievements required ever closer connections with UT By the mid 1990s after many successful joint initiatives between UT and ORNL UT was poised to compete to become the manager of ORNL In 2000 UT Battelle LLC won the bid from the Department of Energy UT was charged with providing scientific direction and key personnel its partner Battelle would oversee ORNL's operations and chart its technology direction The authors highlight the scientific developments these connections have brought from nanotechnology to nuclear fission from cryogenic experiments on mice to the world's fastest supercomputer The partnerships between a university a city and federal facilities helped solve some of the greatest challenges of the twentieth century and point toward how to deal with those of the twenty first

**Critical Connections** David Michael Gould, 2018-09-20 *Critical Connections* examines how trade investment migration and other linkages among countries drive economic growth in the Europe and Central Asia region The study breaks new

ground by using a multidimensional approach that recognizes how each connectivity channel for growth is likely to be affected by the strength of other channels. This multidimensional view makes it easier to see that diversity in country connections and balance in all channels of connectivity are critical for achieving the greatest impact on growth. Europe and Central Asia provides a great laboratory for observing the role of multidimensional connectivity in action. The region's 30 countries vary widely in the openness of their economies. Its collective experience shows how the various elements of cross border connectivity work together to accelerate progrowth knowledge transfers which in turn boost productivity through participation in today's global value chains. A country's economic partner might be just as important as the type of connection. Being well connected to highly connected countries can provide benefits beyond being well connected to comparatively isolated countries. Although greater connectivity can expose countries to external shocks, the report presents fact based argument for policies that seek to build deeper and more diverse connections within the Europe and Central Asia region and globally. The message is timely. Europe's once confident march toward economic integration has slowed over the past decade with voices in many countries questioning the wisdom of opening to the global economy. *Critical Connections* serves as a reminder to citizens and policy makers that greater regional and global connectivity has been a tremendous convergence machine raising living standards of lower income countries toward those of wealthier middle to high income countries. A

*Collection of Performance Tasks & Rubrics: Middle School Mathematics* Charlotte Danielson, Elizabeth Marquez, 2014-05-22 Contains performance tasks that can be used to assess high school students understanding of the basic concepts used in mathematics. **Critical connections : communication for the future.**, **Organizational Oversight** Peggy Stark, 2013-10-18 Using many illustrations this book takes time to describe a strategy for enhancing organizational trust and productive communication and to demonstrate how these can be used to plan and organize both in maintaining the school organization and in adapting it for change. **India and the Knowledge Economy** Anand Kulkarni, 2019-08-24 This book asks fundamental questions about the extent to which India is participating in the global shift towards knowledge based forms of competitiveness. It charts Indian performance and progress using a unique framework benchmarked against fourteen other countries. In the course of the analysis critical areas for improvement are identified and the book provides detailed and objective insights for policy makers and researchers to facilitate change and institutional reform in India. Readers will derive a comprehensive understanding of India's performance and prospects as it emerges as a serious global economic player. A particular feature of the work is the development of an original knowledge footprint concept that measures the extent and impact of knowledge development and diffusion domestic and internationally. The views expressed in this book are the author's.
