Quantitative Genetics with Special Reference to Plant and Animal Breeding Ralph E. Comstock, 1996-04-19 Art and Science in Breeding Margaret Derry, 2012-01-21 Chickens are now the most scientifically engineered of livestock How have the methods used by geneticists differed from those employed by domestic breeders over time Art and Science in Breeding details the relationship between farm practices and agricultural genetics in poultry breeding from 1850 to 1960 Margaret E Derry traces the history and organization of chicken breeding in North America from craft approaches and breeding as an art to the conflicts that had emerged between traditional and scientific methods by the 1940s Derry assesses links between the scientific revolution of chicken farming and the development of corporate breeding as a modern international industry Using poultry as a case study for the wider narrative of agricultural genetics Art and Science in Breeding adds considerable knowledge to a rapidly growing field of inquiry *Plant Breeding Reviews, Volume 25* Jules Janick, 2010-04-07 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base Understanding and preserving crop genetic resources is vital to the security of food systems worldwide Molecular Breeding of Forage and Turf Toshihiko Yamada, German Spangenberg, 2010-06-10 The 5th International Symposium on the Molecular Breeding of Forage and Turf covers all aspects of molecular breeding of forage and turf plants from gene discovery functional genomics molecular genetics and marker technology marker assisted selection transgenesis to transgenic molecular breeding address applications among others for enhanced quality tolerance to biotic and abiotic stresses relating to forage grasses forage legumes their bacterial and fungal endosymbionts as well as turf grasses The Symposium includes keynote presentations from international science leaders in the above fields and offer abstracts in the following topics breeding and functional genomics for tolerance to biotic stress Molecular breeding and functional genomics for tolerance to abiotic stress Molecular genetics and modification of flowering and reproductive development Genomics of plant symbiont relations Molecular breeding for animal human and environmental welfare Development and Application of molecular technologies in forage and turf improvement Bioinformatics bringing data to a usable form for breeders Population and quantitative genetic aspects of molecular breeding Gene manipulation field testing risk assessment and biosafety Intellectual property rights for molecular tools or marker systems *Plant Breeding Reviews, Volume 46*, 2023-02-01 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base understanding and preserving crop genetic resources is vital to the security of food systems worldwide The emphasis of the series is on methodology a fundamental understanding of crop genetics and applications to major crops *Genomics-Assisted Crop Improvement* R.K. Varshney, Roberto Tuberosa, 2007-12-12 Genomics research has great potential to revolutionize the discipline of plant breeding This two volume

set provides a critical assessment of genomics tools and approaches for crop breeding Volume 1 entitled Genomics Approaches and Platforms illustrates state of the art genomics approaches and platforms presently available for crop improvement Volume 2 entitled Genomics Applications in Crops compiles crop specific studies that summarize both the achievements and limitations of genomics research for crop improvement We hope that these two volumes while providing new ideas and opportunities to those working in crop breeding will help graduate students and teachers to develop a better understanding of the applications of crop genomics to plant research and breeding

History of Plant Breeding Rolf H. J. Schlegel, 2017-12-15 While there has been great progress in the development of plant breeding over the last decade the selection of suitable plants for human consumption began over 13 000 years ago Since the Neolithic era the cultivation of plants has progressed in Asia Minor Asia Europe and ancient America each specific to the locally wild plants as well as the ecological and social conditions A handy reference for knowing our past understanding the present and creating the future this book provides a comprehensive treatment of the development of crop improvement methods over the centuries It features an extensive historical treatment of development including influential individuals in the field plant cultivation in various regions techniques used in the Old World and cropping in ancient America The advances of scientific plant breeding in the twentieth century is extensively explored including efficient selection methods hybrid breeding induced polyploidy mutation research biotechnology and genetic manipulation Finally this book presents information on approaches to the sustainability of breeding and to cope with climatic changes as well as the growing world population

Masterminding Nature Margaret Derry, 2015-03-27 In *Masterminding Nature* Margaret Derry examines the evolution of modern animal breeding from the invention of improved breeding methodologies in eighteenth century England to the application of molecular genetics in the 1980s and 1990s A clear and concise introduction to the science and practice of artificial selection Derry's book puts the history of breeding in its scientific commercial and social context *Masterminding Nature* explains why animal breeders continued to use eighteenth century techniques well into the twentieth century why the chicken industry was the first to use genetics in its breeding programs and why it was the dairy cattle industry that embraced quantitative genetics and artificial insemination in the 1970s as well as answering many other questions Following the story right up to the present the book concludes with an insightful analysis of today's complex relationships between biology industry and ethics

Genomic Selection: Lessons Learned and Perspectives Johannes W. R. Martini, Sarah J. Hearne, Brian Gardunia, Valentin Wimmer, Fernando H. Toledo, 2022-09-15 Genomic selection GS has been the most prominent topic in breeding science in the last two decades The continued interest is promoted by its huge potential impact on the efficiency of breeding Predicting a breeding value based on molecular markers and phenotypic values of relatives may be used to manipulate three parameters of the breeder's equation First the accuracy of the selection may be improved by predicting the genetic value more reliably when considering

the records of relatives and the realized genomic relationship Secondly genotyping and predicting may be more cost effective than comprehensive phenotyping Resources can instead be allocated to increasing population sizes and selection intensity The third probably most important factor is time As shown in dairy cattle breeding reducing cycle time by crossing selection candidates earlier may have the strongest impact on selection gain Many different prediction models have been used and different ways of using predicted values in a breeding program have been explored We would like to address the questions i How did GS change breeding schemes of different crops in the last 20 years ii What was the impact on realized selection gain iii What would be the best structure of a crop specific breeding scheme to exploit the full potential of GS iv What is the potential of hybrid prediction epistasis effect models deep learning methods and other extensions of the standard prediction of additive effects v What are the long term effects of GS vi Can predictive breeding approaches also be used to harness genetic resources from germplasm banks in a more efficient way to adapt current germplasm to new environmental challenges This Research Topic welcomes submissions of Original Research papers Opinions Perspectives Reviews and Mini Reviews related to these themes 1 Genomic selection statistical methodology 2 The optimal use of GS in breeding schemes 3 Practical experiences with GS selection gain long term effects negative side effects 4 Predictive approaches to harness genetic resources Concerning point 1 If an original research paper compares different methods empirically without theoretical considerations on when one or the other method should be better the methods should be compared with at least five different data sets The data sets should differ either in crop genotyping method or its source for instance from a breeding program or gene bank accessions Concerning point 2 Manuscripts addressing the use of GS in breeding schemes should illustrate breeding schemes that are run in practice General ideas about schemes that may be run in the future may be considered as Perspective articles Conflict of Interest statements Topic Editor Valentin Wimmer is affiliated to KWS SAAT SE Co KGaA Germany Topic Editor Brian Gardunia is affiliated to Bayer Crop Sciences and has a collaboration with AbacusBio and is an author on patents with Bayer Crop Sciences The other Topic Editors did not disclose any conflicts of interest Image credit CIMMYT reproduced under the CC BY NC SA 2 0 license

Made to Order Margaret E. Derry, 2022-03-01 Animal breeding has been complicated by persisting factors across species cultures geography and time In *Made to Order* Margaret E Derry explains these factors and other breeding concerns in relation to both animals and society in North America and Europe over the past three centuries *Made to Order* addresses how breeding methodology evolved what characterized the aims of breeding and the way structures were put in place to regulate the occupation Illustrated by case studies on important farm animals and companion species the book presents a synthetic overview of livestock breeding as a whole It gives considerable emphasis to genetics and animal breeding in the post 1960 period the relationship between environmental and improvement breeding and regulation of breeding as seen through pedigrees In doing so *Made to Order* shows how studying the ancient human practice of animal breeding can illuminate the ways in which human thinking theorizing and evolving characterize our interactions with all natural processes
