Low, 2010-01-04 An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation It explores the core concepts shared by these related fields using tools and practical

skills such as experimental design generating phylogenies basic statistical inference and persuasive grant writing And contributors use examples from their own cutting edge research providing diverse views to engage students and broaden their understanding This is the only textbook on the subject featuring a collaborative active learning approach that emphasizes hands on learning Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups Each problem includes data presented in a rich array of formats which students use to answer questions that illustrate patterns principles and methods Topics range from Hardy Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity The book also includes a comprehensive glossary In addition to the editors the contributors are James Beck Cawas Behram Engineer John Gaskin Luke Harmon Jon Hess Jason Kolbe Kenneth H Kozak Robert J Robertson Emily Silverman Beth Sparks Jackson and Anton Weisstein Provides experience with hypothesis testing experimental design and scientific reasoning Covers core quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation Turns discussion sections into thinking labs Professors A supplementary Instructor's Manual is available for this book It is restricted to teachers using the text in courses For information on how to obtain a copy refer to http press princeton edu class use solutions html Biogeography C. Barry Cox, Richard J. Ladle, Peter D. Moore, 2020-01-07 Through nine successful editions and for over 45 years Biogeography An Ecological and Evolutionary Approach has provided a thorough and comprehensive exploration of the varied scientific disciplines and research that are essential to understanding the subject The text noted for its clear and engaging style of writing has been praised for its solid background in historical biogeography and basic biology that is enhanced and illuminated by discussions of current research This new edition incorporates the exciting changes of the recent years and presents a thoughtful exploration of the research and controversies that have transformed our understanding of the biogeography of the world New themes and topics in this tenth edition include Next generation genetic technologies and their use in historical biogeography phylogeography and population genomics Biogeographical databases and biodiversity information systems which are becoming increasingly important for biogeographical research An introduction to functional biogeography and its applications to community assembly diversity gradients and the analysis of ecosystem functioning Updated case studies focusing on island biogeography using the latest phylogenetic studies Biogeography An Ecological and Evolutionary Approach reveals how the patterns of life that we see today have been created by the two great Engines of the Planet the Geological Engine plate tectonics which alters the conditions of life on the planet and the Biological Engine evolution which responds to these changes by creating new forms and patterns of life Ecology, Genetics and Evolution of Metapopulations Ilkka A. Hanski, Oscar E. Gaggiotti, 2004-05-17 Ecology Genetics and Evolution of Metapopulations is acollection of specially commissioned articles that looks at fragmented habitats bringing together recent theoretical advances and empirical studies applying the metapopulation approach Several chapters closely integrate ecology with

genetics and evolutionary biology and others illustrate how metapopulation concepts and models can be applied to answer questions about conservation epidemiology and speciation The extensive coverage of theory from highly regarded scientists and the many substantive applications in this one of a kind work make it invaluable to graduate students and researchers in a wide range of disciplines Provides a comprehensive and authoritative account of all aspects of metapopulation biology integrating ecology genetics and evolution Developed by recognized experts including Hanski who won the Balzan Prize for Ecological Sciences Covers novel applications of the metapopulation approach to conservation Handbook on the Economics of Natural Resources Robert Halvorsen, David F. Layton, 2015-02-27 The topics discussed in the Handbook on the Economics of Natural Resources are essential for those looking to understand how best to use and conserve the resources that form the foundation for human well being These include nonrenewable resources mod **Modeling Demographic Processes in Marked Populations** David L. Thomson, Evan G. Cooch, Michael J. Conroy, 2008-12-11 Here biologists and statisticians come together in an interdisciplinary synthesis with the aim of developing new methods to overcome the most significant challenges and constraints faced by quantitative biologists seeking to model demographic rates Landscape Ecology Sarah E. Gergel, Monica G. Turner, 2017-03-30 This title meets a great demand for training in spatial analysis tools accessible to a wide audience Landscape ecology continues to grow as an exciting discipline with much to offer for solving pressing and emerging problems in environmental science Much of the strength of landscape ecology lies in its ability to address challenges over large areas over spatial and temporal scales at which decision making often occurs As the world tackles issues related to sustainability and global change the need for this broad perspective has only increased Furthermore spatial data and spatial analysis core methods in landscape ecology are critical for analyzing land cover changes world wide While spatial dynamics have long been fundamental to terrestrial conservation strategies land management and reserve design mapping and spatial themes are increasingly recognized as important for ecosystem management in aquatic coastal and marine systems This second edition is purposefully more applied and international in its examples approaches perspectives and contributors It includes new advances in quantifying landscape structure and connectivity such as graph theory as well as labs that incorporate the latest scientific understanding of ecosystem services resilience social ecological landscapes and even seascapes Of course as before the exercises emphasize easy to use widely available software http sarahgergel net lel learning landscape ecology <u>Handbook of Operations Research in Natural Resources</u> Andres Weintraub, Carlos Romero, Trond Bjørndal, Rafael Epstein, 2007-09-19 Handbook of Operations Research in Natural Resources will be the first systematic handbook treatment of quantitative modeling natural resource problems their allocated efficient use and societal and economic impact Andr s Weintraub is the very top person in Natural Resource research Moreover he has an international reputation in OR and a former president of the International Federation of Operational Research Societies IFORS He has selected co editors who are at the top of the sub fields in natural resources agriculture fisheries

forestry and mining The book will cover these areas in terms with contributions from researchers on modeling natural research problems quantifying data developing algorithms and discussing the benefits of research implementations The handbook will include tutorial contributions when necessary Throughout the book technological advances and algorithmic developments that have been driven by natural resource problems will be called out and discussed Biodiversity, 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

Transforming Parks and Protected Areas Kevin S. Hanna, Douglas A. Clark, D. Scott Slocombe, 2007-10-18 This title was originally published in 2007 The version published in 2012 is a PB reprint of the original HB The protection of natural resources and biodiversity through protected areas is increasingly based on ecological principles Simultaneously the concept of ecosystem based management has become broadly accepted and implemented over the last two decades However this period has also seen unprecedented rapid global social and ecological change which has weakened many protection efforts These changes have created an awareness of opportunities for innovative approaches to managing protected areas and of the need to integrate social and economic concerns with ecological elements in protected areas and parks management A rare collection of articles that fuses academic theory critique of practice and practical knowledge Transforming Parks and Protected Areas analyzes and critiques these theories practices and philosophies looking in detail at the emerging issues in the design and operation of parks and protected areas Addressing critical dynamics and current practices in parks and protected areas management the excellent volume goes well beyond simple managerial solutions and descriptions of standard practice With contributions from leading academics and practitioners this book will be of value to all those working within ecology natural resources conservation and parks management as well as students and academics across the environmental sciences and land use management

Social-Ecological Resilience and Law Ahjond S. Garmestani, Craig R.

Allen, 2014-02-25 Environmental law envisions ecological systems as existing in an equilibrium state or a balance of nature reinforcing a rigid legal framework unable to absorb rapid environmental changes and innovations in sustainability For the past three decades resilience theory which embraces uncertainty and nonlinear dynamics in complex adaptive systems has shown itself to be a robust and invaluable basis for sound environmental management Reforming American law to account for this knowledge is key to transitioning to sustainability This volume features top legal and resilience scholars speaking on resilience theory and its legal applications to climate change biodiversity national parks and water law Accomplishments in Applied Forest Economics Research F. Helles, N. Strange, Lars Wichmann, 2013-03-14 The papers in this book were in a preliminary version presented at an international conference May 21 25 2002 in Gilleleje Denmark It was a joint event namely the biennial meeting of the Scandinavian Society of Forest Economics and the 3rd Berkeley KVL Con ference The Scandinavian Society of Forest Economics SSFE was established in 1958 as a forum for forest economists in the Nordic countries to meet and exchange ideas on research and education Alternating between Denmark Finland Norway and Sweden biennial ordinary meetings have taken place ever since The number of participants has increased from 10 15 in the first decade to more than 80 in 2002 In the last two decades prominent researchers from outside Scandinavia have been invited to present papers at the biennial meetings and also to participate in ad hoc working groups The Berkeley KVL part of the conference is based on a research collaboration between The Royal Veterinary and Agricultural University KVL Copenhagen University of Cali fornia at Berkeley and Oregon State University It was initiated in 1993 within the frame work of a research programme at KVL Stochastic Decision Analysis in Forest Manage ment and since 1996 extended to the programme Economic Optimisation of Multiple Use Forestry and Other Natural Resources Advancing Africa's Sustainable Development Alain L. Fymat, 2018-11-14 While many African countries lag behind the rest of the industrialised world in scientific and medical research and development the situation is progressively improving This is why the Society for the Advancement of Science in Africa was established to contribute to economic advancement and sustainability through science research education and innovation This book provides a selection of papers from the Advancement of Science in Africa's fourth annual conference The conference was held under the overarching theme of science technology and innovation in Africa with several important sub themes including but not limited to improving health research and disease surveillance education collaborating in research responding to epidemic diseases with high mortality in Africa and promoting women s interest in science careers The collection illustrates how although the chapter contributors come from various countries and universities representing their own academic research they all share a common interest in advancing science technology and Tropical Wetland Management Antonio Augusto Rossotto Ioris, 2016-02-17 Recent scientific innovation in Africa development and politico institutional experiences related to the conservation of the South American Pantanal are explored in this book in relation to what is happening in other tropical wetland areas of international importance such as the

Everglades in North America and the Okavango in Africa as well as considering the European experience An interdisciplinary group of authors examines the need to establish a constructive dialogue between scientists policy makers and local stakeholders and outline a future research agenda including consideration of the impacts of climate change and the pressures of regional development for wetland management *Population Viability Analysis* Steven R. Beissinger, Dale R. McCullough, 2002-05-04 Many of the world's leading conservation and population biologists evaluate what has become a key tool in estimating extinction risk and evaluating potential recovery strategies population viability analysis or PVA

Exploring Sustainability Science Michael Burns, Alex Weaver, 2008-08-01 Southern Africa is well blessed with a diverse and vibrant human population and a wealth of natural capital The key challenge for sustainable development is to grow society s capacity to use this natural capital to meet the needs of the region s human population especially the poor in ways that sustain environmental life support systems Collaborating across disciplines the authors explore the underpinning principles and the potential of sustainability science in a number of case studies
