## Quantum Field Theory Of Point Particles And Strings:

**Quantum Field Theory Of Point Particles And Strings** Brian Hatfield, 2018-03-09 First Published in 2018 The emphasis of the book is calculational and most computations are presented in step by step detail The book is unique in that it develops all three representations of quantum field theory operator functional Schrödinger and path integral for point particles and strings In many cases identical results are worked out in each representation to emphasize the representation independent structures of quantum field theory Quantum Field Theory Of Point Particles And Strings B. String Theory and Particle Physics Luis E. Ibáñez, Angel M. Uranga, 2012-02-09 A systematic introduction to string phenomenology outlining how string theory is connected to the real world of particle physics *Superstrings, P-branes and M-theory*, *Feynman Lectures On Gravitation* Richard Feynman, 2018-05-04 The Feynman Lectures on Gravitation are based on notes prepared during a course on gravitational physics that Richard Feynman taught at Caltech during the 1962-63 academic year For several years prior to these lectures Feynman thought long and hard about the fundamental problems in gravitational physics yet he published very little These lectures represent a useful record of his viewpoints and some of his insights into gravity and its application to cosmology superstars wormholes and gravitational waves at that particular time The lectures also contain a number of fascinating digressions and asides on the foundations of physics and other issues Characteristically Feynman took an untraditional non geometric approach to gravitation and general relativity based on the underlying quantum aspects of gravity Hence these lectures contain a unique pedagogical account of the development of Einstein's general theory of relativity as the inevitable result of the demand for a self consistent theory of a massless spin 2 field the graviton coupled to the energy momentum tensor of matter This approach also demonstrates the intimate and fundamental connection between gauge invariance and the principle of equivalence The Emergence of Spacetime in String Theory Tiziana Vistarini, 2019-06-12 The nature of space and time is one of the most fascinating and fundamental philosophical issues which presently engages at the deepest level with physics During the last thirty years this notion has been object of an intense critical review in the light of new scientific theories which try to combine the principles of both general relativity and quantum theory called theories of quantum gravity This book considers the way string theory shapes its own account of spacetime disappearance from the fundamental level Memorial Volume On Abdus Salam's 90th Birthday Lars Brink, Michael James Duff, Kok Khoo Phua, 2017-03-21 This book presents a timely set of academic and intellectual views on Salam's scientific passion contribution and personality and will be of great interest to academics in the fields of particle physics high energy physics and scientific history of the developing world Contemporary Physics In honor of one of the most prolific and exciting scientists of the second half of the last century a memorial meeting was organized by the Institute of Advanced Studies at Nanyang Technological University for Professor Abdus Salam's 90th Birthday in January 2016 Salam believed that scientific thought is the common heritage of all mankind and that the developing world should play

its part not merely by importing technology but by being the arbiter of its own scientific destiny That belief saw him rise from humble beginnings in a village in Pakistan to become one of the world's most original and influential particle physicists culminating in the 1979 Nobel Prize shared with Glashow and Weinberg for contributions to electroweak unification which forms an integral part of the Standard Model The book collected the papers presented at this memorable event which saw many distinguished scientists participating as speakers to reflect on Prof Salam's great passion for the science and achievements

Techniques and Concepts of High-Energy Physics Harrison B. Prosper, Michael Danilov, 2012-12-06  
 Proceedings of the NATO Advanced Study Institute St Croix Virgin Islands USA 15-26 June 2000 *Superstring Construction* A.N. Schellekens, 2012-12-02 The book includes a selection of papers on the construction of superstring theories mainly written during the years 1984-1987 It covers ten dimensional supersymmetric and non supersymmetric strings four dimensional heterotic strings and four dimensional type II strings An introduction to more recent developments in conformal field theory in relation to string construction is provided

Strings and Fundamental Physics Marco Baumgartl, Ilka Brunner, Michael Haack, 2012-04-05 The basic idea simple and revolutionary at the same time to replace the concept of a point particle with a one dimensional string has opened up a whole new field of research Even today four decades later its multifaceted consequences are still not fully conceivable Up to now string theory has offered a new way to view each particle as different excitations of the same fundamental object It has celebrated success in discovering the graviton in its spectrum and it has naturally led scientists to posit space times with more than four dimensions which in turn has triggered numerous interesting developments in fields as varied as condensed matter physics and pure mathematics This book collects pedagogical lectures by leading experts in string theory introducing the non specialist reader to some of the newest developments in the field The carefully selected topics are at the cutting edge of research in string theory and include new developments in topological strings or AdS/CFT dualities as well as newly emerging subfields such as doubled field theory and holography in the hydrodynamic regime The contributions to this book have been selected and arranged in such a way as to form a self contained graduate level textbook

Harald Fritzsch Memorial Volume Gerhard Buchalla, Dieter Luest, Zhi-zhong Xing, 2024-08-08 This book is a tribute to Harald Fritzsch 1943-2022 who has made outstanding contributions to the development of modern particle physics He was a pioneer of QCD the gauge theory of strong interactions and contributed significantly to Grand Unified Theories and to the physics of quark and lepton flavors The present book collects reminiscences of Harald Fritzsch and scientific articles written by friends colleagues collaborators and former students The contributed articles span a wide range of topics reflecting Harald's broad interests in physics from QCD and its applications at high and low energies the flavor puzzle flavor symmetries and textures to gravity constants of Nature and fundamental symmetries and their violation The authors of these articles include among others Siegfried Bethke Johannes Blumlein Stanley J Brodsky Gerard 't Hooft Heinrich Leutwyler Hans Peter Nilles Serguey T Petcov Kok Khoo Phua and Willibald

**Shape, Smoothness, and Invariant Stratification of an Attracting Set for Delayed Monotone Positive Feedback** Tibor Krisztin, Hans-Otto Walther, Jianhong Wu, This volume contains recent results about the global dynamics defined by a class of delay differential equations which model basic feedback mechanisms and arise in a variety of applications such as neural networks The authors describe in detail the geometric structure of a fundamental invariant set which in special cases is the global attractor and the asymptotic behavior of solution curves on it The approach makes use of advanced tools which in recent years have been developed for the investigation of infinite dimensional dynamical systems local invariant manifolds and inclination lemmas for noninvertible maps Floquet theory for delay differential equations a priori estimates controlling the growth and decay of solutions with prescribed oscillation frequency a discrete Lyapunov functional counting zeros methods to represent invariant sets as graphs and Poincare Bendixson techniques for classes of delay differential systems Several appendices provide the general results needed in the case study so the presentation is self contained Some of the general results are not available elsewhere specifically on smooth infinite dimensional centre stable manifolds

**String Theory Research Progress** Ferenc N. Balogh, 2008 String theory is a model of fundamental physics whose building blocks are one dimensional extended objects called strings rather than the zero dimensional point particles that form the basis for the standard model of particle physics The phrase is often used as shorthand for Superstring theory as well as related theories such as M theory By replacing the point like particles with strings an apparently consistent quantum theory of gravity emerges Moreover it may be possible to unify the known natural forces gravitational electromagnetic weak nuclear and strong nuclear by describing them with the same set of equations Studies of string theory have revealed that it predicts higher dimensional objects called branes String theory strongly suggests the existence of ten or eleven in M theory space time dimensions as opposed to the usual four three spatial and one temporal used in relativity theory
