poorly understood material Author Jack Buffington argues that the plastics crisis is careening toward a tipping point from which there will be no return There is still time however to do something about this crisis if we have the imagination and the will to move away from the failed policies of the past This book is the first to propose a new model for linking our synthetic world to the natural one rather than seeking to treat them as separate entities The key is supply chain innovation Buffington presents five market based solutions based on this principle that will allow consumers to continue to use plastic which has in many ways enabled our way of life Alongside these proposed solutions he also addresses the proliferation of plastic as we know it growth that if left unchecked will lead to a planetary crisis according to the United Nations and considers how the material itself might be adapted for a sustainable future
