Pisciolli, 2012-12-06 After historical introduction the aspiration technique and imaging modalities are described Thereafter the use of aspiration cytology in the diagnosis and mainly in the staging of urologic cancers is on still not well known applications of the procedure in the staging of some organs bladder adrenals penis testis and secondary ureteral strictures are reported **Handbook of Targeted Delivery of Imaging Agents** Vladimir P. Torchilin, 1995-08-23 This is the first time detailed and updated information on the targeted delivery of imaging agents has been collected into a single handbook This comprehensive volume presents the scientific background together with the latest experimental and clinical data in this fast growing area The Handbook of Targeted Delivery of Imaging Agents meets the requirements of the broadest audience including researchers practitioners and students The basic principles of targeted delivery of imaging are presented and discussed together with various imaging agents and different imaging modalities such as gamma imaging MR imaging and CT PET and SPECT imaging The book consists of eight parts and 39 chapters covering all aspects of targeted drug delivery from the imaging theory and chemistry of imaging agents to their experimental and clinical use for targeted visualization of cancer including ovarian prostate colorectal and thyroid cancer cardiovascular atherosclerosis myocardial infarction and thromboses and neurological diseases infection and inflammation sites A special section discusses the targeted delivery of imaging agents into lymph nodes which are often sites of metastases during different malignant diseases Monoclonal antibody based targeted imaging agents are considered together with new approaches involving the use of labeled micelles liposomes and polymer coated particles The book describes the possible application of designer antibodies for the delivery of diagnostic agents including the preparation properties labeling and experimental use of multifunctional antibodies The alternative improvement of antibody directed targeting describes the application of avidin biotin system for the delivery of imaging agents Long circulating blood pool imaging agents are considered as a special group of organ specific pharmaceuticals The latest trends in the synthesis of immunoscintigraphic MR and CT agents are presented This Handbook of Targeted Delivery of Imaging Agents is a must have reference for all those who need to stay abreast of the latest developments in this hot field **Haimovici's Vascular Surgery** Enrico Ascher, 2012-06-20 To improve the diagnosis and management of patients with vascular disease turn to the most authoritative and trusted reference for 36 years and counting The role of the vascular surgeon has evolved Vascular surgeons now perform minimally invasive vascular procedures and provide comprehensive care in addition to open surgery Haimovici's Vascular Surgery now in its 6th edition has been extensively updated to provide you with Expert perspectives on how the vascular surgery field has evolved so you continue to stay on the leading edge of this dynamic field Concise and practical advice about what these changes and new areas of practice mean to you the practitioner and trainee in the fields of vascular surgery interventional cardiology and

L. Leong, Yuko Kitagawa, Masaki Kitajima, 2006-06-20 In human solid cancer the lymph node LN status is the most important prognostic indicator for the clinical outcome of patients Recent developments in the sentinel lymph node SLN concept and technology have resulted in the application of this revolutionary approach to define the first draining or SLN to which the cancer may have metastasized The underlying thesis in solid cancer biology is that metastasis generally starts in an orderly progression spreading through the lymphatic channels to the SLN in the nearest LN basin Thus the logical approach is to harvest that specific SLN for thorough analysis Because a tumor-free SLN is usually associated with a negative residual LN basin a negative SLN is an excellent indication that micrometastasis has not occurred in the regional LNs When the SLN is involved it is unknown whether or not metastasis is limited only to the SLN or if the disease has spread to the remainder of the nodal basin For this reason if a SLN is positive a complete lymph node dissection is recommended Therefore selective sentinel lymphadenectomy SSL should be considered as a staging procedure so that patients with negative SLNs about 80% may be spared an extensive LN dissection Malignant melanoma has been proven to be the most ideal tumor model to study the role of SLN Subsequently SSL has been applied to breast cancer colon cancer and other types of solid cancer The multidisciplinary approach encompassing the surgeon nuclear medicine physician and pathologist is the key to such a successful procedure Such a team can be formed readily with appropriate training Beyond the technical aspects of harvesting the SLN the implication of micrometastasis remains to be defined Because the follow up of melanoma and breast cancer patients after SSL is crucial ongoing clinical trials are in progress to determine the biological and clinical significance of SLNs Although the concept of SLN is viable in other types of cancer such as gynecological and gastrointestinal the technical aspects of the procedure need to be perfected and verified The most exciting possibility of SSL is that it will lead to early diagnosis of micrometastasis in regional LNs Early diagnosis makes it useful as a clinical staging procedure and opens up new opportunities to study micrometastasis and its evolution within the SLNs Examining the multifaceted aspects of micrometastasis such as differentiation of different clones with respect to the primary tumor acquisition of adhesion molecules and host interaction with the microscopic tumor will shed new light on the biology of early

metastasis New molecular and genetic tools may be used to dissect the mechanisms of lymphatic and hemo togenous routes of metastasis If such mechanisms can be understood new therapeutic advances may be developed to prevent the process of micrometastasis Rather than targeting larger tumor burdens such as Stage IV disease targeted adjuvant clinical trials can be developed for high risk patients following definit ive surgical resection SSL is a standard staging procedure for patients with melanoma and is rapidly evolving into a standard procedure for breast cancer as well

Radiological Imaging of the Ureter Francis Joffre,Philippe Otal,Michel Soulie,2012-12-06 Owing to its central position in the retroperitoneal and pelvic cavity the ureter is rapidly affected by a variety of pathological processes Furthermore any disease involving the ureter can also have an effect on the kidneys For several decades the diagnosis of diseases affecting the ureter was based on intravenous excretory urography and techniques of direct opacification However the diagnostic strategy has been extensively modified by the advent of helical computed tomography and magnetic resonance imaging This book the first to focus specifically on ureteral imaging covers both the new and the traditional techniques Their use in the variety of scenarios involving ureteral disease is clearly elucidated with the aid of high quality informative images
