Commerce Committee,1974 **Mobile Agents For Telecommunications Applications: Proceedings Of The First International Workshop** Ahmed Karmouch,Roger Impey,1999-09-24 A software agent has a spectrum of definitions At one end of the scale are relatively simple client based software applications that can assist users in performing mundane tasks such as sorting e mail or downloading web pages This class of agents is often referred to as personal assistant agents At the other end of the scale is the concept of sophisticated software entities possessing artificial intelligence that autonomously travel through a network environment and make complex decisions on a user s behalf In telecommunications the definition lies somewhere between those two extremes This classification of mobile agents although not strictly adhering to the definition of intelligent agents originally proposed by

the artificial intelligence community is generally acknowledged to be a useful categorization and has started to gain widespread acceptance We therefore define a mobile agent as a program that acts on behalf of a user or another program and is able to migrate from host to host on a network under its own control The agent chooses when and where it will migrate and may interrupt its own execution and continue elsewhere on the network The agent returns results and messages in an asynchronous fashion This volume discusses the emerging field of mobile software agents and their applications to the area of telecommunications such as active networks e commerce the Internet interactive QoS network management and feature interactions It addresses the needs of a wide audience including researchers software agent systems and telecommunication applications designers and users of software agents

Wörterbuch der Elektronik, Datentechnik, Telekommunikation und Medien Victor Ferretti, 2013-11-27 Since the first edition was published new technologies have emerged especially in the area of convergence of computing and communications accompanied by a lot of new technical terms This third expanded and updated edition has been adapted to cope with this situation The number of entries has been incremented by 35% This dictionary offers a valuable guide to navigate through the entanglement of German and English terminology The lexicographic concept indication of the subject field for every term short definitions references to synonyms antonyms general and derivative terms has been maintained as well as the tabular layout

Biomass Utilization: Conversion Strategies Nhuan Phu Nghiem, Tae Hyun Kim, Chang Geun Yoo, 2022-08-20 This book focuses on the technologies developed for the conversion of all three biomass components i e cellulose hemicellulose and lignin and their constituents to fuels and high value products Both biochemical and thermochemical approaches are reviewed Additionally the developed technologies are described in detail and their potential applications as well as their commercial status are discussed The early attempts to produce fuel ethanol from lignocellulosic biomass feedstock focused solely on the biological conversion of cellulose because the only organism that had been used successfully for commercial production of ethanol i e *Saccharomyces cerevisiae* could only ferment glucose which was obtained from the hydrolysis of cellulose Hemicellulose and lignin were considered as wastes in these processes and were normally removed in pretreatment processes to enhance enzymatic hydrolysis of the remaining cellulose However this approach was not economically feasible and as a result the biorefinery concept was developed In a biorefinery in addition to ethanol various higher value products are produced from hemicellulose and lignin which were previously not considered Consequently technologies were developed for the fractionation of biomass and conversion of hemicellulose and lignin to fuels and high value products to improve the economic feasibility Written and edited by a team of investigators with many years of experience in biomass processing research and development this book is an informative resource for postgraduate students and researchers interested in biorefinery and biofuel technologies both in academia and commercial laboratories
