**Syntactic and Structural Pattern Recognition** Gabriel Ferrate, Theo Pavlidis, Alberto Sanfeliu, Horst Bunke, 2012-12-06 Thirty years ago pattern recognition was dominated by the learning machine concept that one could automate the process of going from the raw data to a classifier. The derivation of numerical features from the input image was not considered an important step. One could present all possible features to a program which in turn could find which ones would be useful for pattern recognition. In spite of significant improvements in statistical inference techniques progress was slow. It became clear that feature derivation was a very complex process that could not be automated and that features could be symbolic as well as numerical. Furthermore the spatial relationship amongst features might be important. It appeared that pattern recognition might resemble language analysis since features could play the role of symbols strung together to form a word. This led to the genesis of syntactic pattern recognition pioneered in the middle and late 1960s by Russel Kirsch, Robert Ledley, Nararimhan and Allan Shaw. However the thorough investigation of the area was left to King Sun Fu and his students who until his untimely death produced most of the significant papers in this area. One of these papers syntactic recognition of fingerprints received the distinction of being selected as the best paper published that year in the IEEE Transaction on Computers. Therefore syntactic pattern recognition has a long history of active research and has been used in industrial applications.

**Morphological Image Analysis** Pierre Soille, 2013-03-14 Following the success of the first edition recent developments in the field of morphological image analysis called for an extended second edition. The text has been fully revised with the goal of improving its clarity while introducing new concepts of interest to real image analysis applications. One chapter devoted to texture analysis has been added. Main extensions include discussion about multichannel images and their morphological processing, ordering relations on image partitions, connected operators and levellings, homotopy for greytone images, translation invariant implementations of erosions and dilations by line segments, reinforced emphasis on rank based morphological operators, grey tone hit or miss, ordered independent homotopic thinnings and anchored skeletons, self dual geodesic transformation and reconstruction, area based self dual filters, anti centre watershed based texture segmentation, texture models and new scientific and industrial applications.

**Intelligent Decision Support Systems** Surekha Borra, Nilanjan Dey, Siddhartha Bhattacharyya, Mohamed Salim Bouhlef, 2019-10-21 Intelligent prediction and decision support systems are based on signal processing, computer vision, CV, machine learning, ML, software engineering, SE, knowledge based systems, KBS, data mining, artificial intelligence, AI and include several systems developed from the study of expert systems, ES, genetic algorithms, GA, artificial neural networks, ANN and fuzzy logic systems. The use of automatic decision support systems in design and manufacturing industry, healthcare and commercial software development systems has the following benefits: Cost savings in companies due to employment of expert system technology, Fast decision making, completion of projects in time and development of new products, Improvement in decision making capability and quality.

Usage of Knowledge database and Preservation of expertise of individuals Eases complex decision problems Ex Diagnosis in Healthcare To address the issues and challenges related to development implementation and application of automatic and intelligent prediction and decision support systems in domains such as manufacturing healthcare and software product design development and optimization this book aims to collect and publish wide ranges of quality articles such as original research contributions methodological reviews survey papers case studies and or reports covering intelligent systems expert prediction systems evaluation models decision support systems and Computer Aided Diagnosis CAD *Advances and Applications of DSMT for Information Fusion, Vol. IV* Florentin Smarandache, Jean Dezert, 2015-03-01 The fourth volume on Advances and Applications of Dezert Smarandache Theory DSMT for information fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics The contributions see List of Articles published in this book at the end of the volume have been published or presented after disseminating the third volume 2009 <http://fs.gallup.unm.edu/DSMT/book3.pdf> in international conferences seminars workshops and journals

*Logic-Based Artificial Intelligence* Jack Minker, 2012-12-06 The use of mathematical logic as a formalism for artificial intelligence was recognized by John McCarthy in 1959 in his paper on Programs with Common Sense In a series of papers in the 1960 s he expanded upon these ideas and continues to do so to this date It is now 41 years since the idea of using a formal mechanism for AI arose It is therefore appropriate to consider some of the research applications and implementations that have resulted from this idea In early 1995 John McCarthy suggested to me that we have a workshop on Logic Based Artificial Intelligence LBAI In June 1999 the Workshop on Logic Based Artificial Intelligence was held as a consequence of McCarthy s suggestion The workshop came about with the support of Ephraim Glinert of the National Science Foundation IIS 9S2013S the American Association for Artificial Intelligence who provided support for graduate students to attend and Joseph JaJa Director of the University of Maryland Institute for Advanced Computer Studies who provided both manpower and financial support and the Department of Computer Science We are grateful for their support This book consists of refereed papers based on presentations made at the Workshop Not all of the Workshop participants were able to contribute papers for the book The common theme of papers at the workshop and in this book is the use of logic as a formalism to solve problems in AI
