

The background of the cover is an aerial photograph of a mangrove forest. A light-colored, winding waterway or canal cuts through the dense, green mangrove vegetation. The waterway starts from the top right and curves towards the bottom left. The mangrove trees appear as a textured, green carpet. The overall color palette is dominated by various shades of green and light brown/tan for the water.

Mangrove Ecology, Silviculture and Conservation P. Saenger, 2002 An account of mangrove plants from around the world together with silvicultural and restoration techniques and the management requirements of these communities to ensure their sustainability and conservation Mangrove Ecology, Silviculture and Conservation Peter Saenger, 2014-01-15

Mangrove Ecology, Silviculture and Conservation Peter Saenger, 2013-06-29 Mangroves are a fascinating group of plants that occur on tropical and subtropical shorelines of all continents where they are exposed to saltwater inundation low oxygen levels around their roots high light and temperature conditions and periodic tropical storms Despite these harsh conditions mangroves may form luxuriant forests which are of significant economic and environmental value throughout the world they provide coastal protection and underpin fisheries and forestry operations as well as a range of other human activities This book provides an up to date account of mangrove plants from around the world together with silvicultural and restoration techniques and the management requirements of these communities to ensure their sustainability and conservation All aspects of mangroves and their conservation are critically re examined Those activities which threaten their ongoing survival are identified and suggestions are offered to minimise their effects on these significant plant communities *Mangroves: Structure, Functions, Ecology and Biodiversity* Dr. Hiren B. Soni, Dr. Kavita Thakur, Marine ecosystems are diverse habitats endowed with physical chemical and geographical variations in the ecosystems where the gradation from highly productive organisms to highly specialized organisms exists India has almost 7 517 km long coast of which 5 423 km belongs to the peninsular India and around 2 094 km to the Andaman Nicobar and Lakshadweep Islands The mainland coast of India consists of 43% sandy beaches 11% rocky coast including cliffs and 46% mudflats or marshy coast This massive coastline of India supports the human population tremendously through marine resources Nearly 250 million people live within the fringe of 50 km from the coastline of India Hence a vital role in India's economic growth is played by the ecological services that the marine and coastal ecosystems provide The MPAN Marine Protected Area Network in India regulates the natural marine resources to conserve the depleting biodiversity for the betterment of people that are dependent on these coastal resources Moreover Gujarat State is bestowed with one of the longest coastline of India 1 650 km The Gulf of Kachchh Gujarat is India's first Marine National Park MNP contributing to the ecological importance of the state's coastal ecosystem exhibiting the most vulnerable biological diversity in intertidal mudflats gulfs bays wetlands mangroves salt marshes coral reefs beaches dunes and estuaries The book *Mangroves Structure Functions Ecology and Biodiversity* focuses on environmental and ecological studies of Gulf of Kachchh Western Gujarat India in relation to eutrophication biotic components structure and functions of mangroves and biomonitoring of metals The book covers an in depth study of surface water and bottom sediment quality diversity density abundance commonness rarity of shells ecological structure and functions of mangrove environment including composition population dynamics community structure of floral and faunal species phytochemical constituents of

selected mangrove tree species and biomonitoring of nutrients in *Avicennia marina* The book would unquestionably be the need of an hour for mangroves managers marine conservationists and policy makers or decision authorities to prevent the unrestrained exploitation of marine biodiversity destruction of potential mangrove habitats and uncontrolled interactions of man and technology with mangrove ecosystems around the world

Research Developments in Saline Agriculture Jagdish Chander Dagar,Rajender Kumar Yadav,Parbodh Chander Sharma,2019-06-21 Soil and water salinity is a major challenge for the agricultural community and policy makers in terms of meeting the burgeoning population s demand for food and other agricultural commodities In coastal regions climate change and sea level rise will aggravate the problem with more and more areas becoming saline due to intrusion of sea water As such there is a pressing need for modern tools and innovative techniques for the identification of salty soils and poor quality waters crop production soil reclamation and lowering the

water table in waterlogged areas Tackling next generation problems such as contamination of soil and underground water due to fluoride and arsenic as well as developing multi stress tolerant crops is also a high priority Further techniques for domesticating halophytes mangrove based aquacultures using seaweed cultures as agricultural crops and integrated farming systems need to be perfected This book addresses all these aspects in detail highlighting the diverse solutions to tackle the complex problem of salinity and waterlogging and safer management of poor quality waters With chapters written by leading experts it is a valuable resource for researchers planning future investigations policy makers farmers and other stakeholders and for students wanting insights into vital issues of environment
