**Biochemistry of the Eye** Elaine R. Berman,2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue

**From Ion Channels to Cell-to-Cell Conversations** Ramón Latorre, Juan Carlos Sáez, 2013-11-21 Ion channels allow us to see nature in all its magnificence to hear a Bach suite to smell the aroma of grandmother s cooking and in this regard they put us in contact with the external world These ion channels are protein molecules located in the cell membrane In complex organisms cells need to communicate in order to know about their metabolic status and to act in a coordinate manner The latter is also accomplished by a class of ion channels able to pierce the lipid bilayer membranes of two adjacent cells These intercellular channels are the functional subunits of gap junctions Accordingly the book is divided in two parts the first part is dedicated to ion channels that look to the external world and the second part is dedicated to gap junctions found at cell interfaces This book is based on a series of symposia for a meeting on ion channels and gap junctions held in Santiago Chile on November 28 30 1995 The book should be useful to graduate students taking the first steps in this field as well as a reference for the aficionado The aim of the meeting was mainly to show the impact of various modern techniques including cell biology molecular biology biophysics and molecular genetics techniques in the study of these ubiquitous intrinsic membrane proteins Molecular genetics techniques paved the road to the manipulation of the channel forming molecules
