Ophthalmology Myron Yanoff, Jay S. Emergencies of the Orbit and Adnexa Bipasha Mukherjee, Hunter Yuen, 2016-12-15 This handbook on orbital lacrimal and eyelid emergencies deals with such situations in a practical manner guiding the ophthalmologists in accurate handling and making them more proficient and confident in managing vision and life threatening emergencies With 51 chapters and more than 350 images this book covers all the eye emergencies that generalist and specialist ophthalmologists can expect to come across in their day to day practices It can be argued that the orbit can no more be called Pandora's Box because of the unpredictable nature

of its contents This perception has changed over the years due to the advent of improved diagnostic in particular imaging techniques However since medical residency provides very little exposure to orbital and adnexal disorders most clinicians are inexperienced and unsure about their management Facing an emergency situation where improper management can rapidly worsen the condition leading to blindness or even death of the patient is every ophthalmologist s nightmare The emergent nature of these conditions does not always provide for a leeway to refer these patients to an orbit and oculoplasty specialist who are few and far between By the time the patient reaches his destination his vision maybe irrevocably lost The legal implications of such mismanagement can be significant too This book is a quick and essential resource to manage and refer eye emergencies with confidence
