**The Battle of the Sexes in Science Fiction** Justine Larbalestier, 2023-09-05. Runner-up for the Hugo Best Related Book Award 2003. *The Battle of the Sexes in Science Fiction* is a lively account of the role of women and feminism in the development of American science fiction during its formative years, the mid-20th century. Beginning in 1926 with the publication of the first issue of *Amazing Stories*, Justine Larbalestier examines science fiction's engagement with questions of femininity, masculinity, sex, and sexuality. She traces the debates over the place of women and feminism in science fiction as it emerged in stories, letters, and articles in science fiction magazines and fanzines. The book culminates in the story of James Tiptree Jr. and the eponymous Award Tiptree was a successful science fiction writer of the 1970s who was later discovered to be a woman. Tiptree's easy acceptance by the male-dominated publishing arena of the time proved that there was no necessary difference in the way men and women wrote, but that there was a real difference in the way they were read.

Unnatural Narrative Jan Alber, 2016-03. A talking body part, a character that is simultaneously alive and dead, a shape-changing setting, or time travel, although impossible in the real world, such narrative elements do appear in the storyworlds of novels, short stories, and plays. Impossibilities of narrator, character, time, and space are not only common in today's world of postmodernist literature but can also be found throughout the history of literature. Examples include the beast fable, the heroic epic, the romance, the eighteenth-century circulation novel, the Gothic novel, the ghost play, the fantasy narrative, and the science fiction novel, among others. *Unnatural Narrative* looks at the startling and persistent presence of the impossible or the unnatural throughout British and American literary history. Layering the lenses of cognitive narratology, frame theory, and possible worlds theory, *Unnatural Narrative* offers a rigorous and engaging new characterization of the unnatural and what it yields for individual readers as well as literary culture. Jan Alber demonstrates compelling interpretations of the unnatural in literature and shows the ways in which such unnatural phenomena become conventional in readers' minds, altogether expanding our sense of the imaginable and informing new structures and genres of narrative engagement.

Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings. Science Fact and

Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed
