

OECD Environmental Outlook to 2030

Summary in English

- How will economic and social developments drive environmental change to 2030? What policies are needed to address the main environmental challenges? How can OECD and non-OECD countries best work together to tackle these challenges?
- The *OECD Environmental Outlook to 2030* provides analyses of economic and environmental trends to 2030, and simulations of policy actions to address the key challenges. Without new policies, we risk irreversibly damaging the environment and the natural resource base needed to support economic growth and well-being. The costs of policy inaction are high.
- But the Outlook shows that tackling the key environmental problems we face today – including climate change, biodiversity loss, water scarcity and the health impacts of pollution – is both achievable and affordable. It highlights a mix of policies that can address these challenges in a cost-effective way. The focus of this Outlook is expanded from the 2001 edition to reflect developments in both OECD countries and Brazil, Russia, India, Indonesia, China, South Africa (BRICS), and how they might better co-operate on global and local environmental problem-solving.

Hadjichambis, Pedro Reis, Demetra Paraskeva-Hadjichambi, Jan

Činčera, Jelle Boeve-de Pauw, Niklas Gericke, Marie-Christine Knippels, 2020-02-26 This Open Access book is about the development of a common understanding of environmental citizenship. It conceptualizes and frames environmental citizenship taking an educational perspective. Organized in four complementary parts, the book first explains the political, economic, and societal dimensions of the concept. Next, it examines environmental citizenship as a psychological concept with a specific focus on knowledge, values, beliefs, and attitudes. It then explores environmental citizenship within the context of environmental education and education for sustainability. It elaborates responsible environmental behaviour, youth activism, and education for sustainability through the lens of environmental citizenship. Finally, it discusses the concept within the context of different educational levels such as primary and secondary education in formal and non-formal settings. Environmental citizenship is a key factor in sustainability, green and circular economy, and low carbon society and an important aspect in addressing global environmental problems. It has been an influential concept in many different arenas such as economy, policy, philosophy, and organizational marketing. In the field of education, the concept could be better exploited and established, however. Education and especially environmental discourses in science education have a great deal to contribute to the adoption and promotion of environmental citizenship.

Corporate Behavior and Sustainability

Güler Aras, Coral Ingley, 2016-10-04 Companies can no longer expect to engage in dubious or unethical corporate behaviour without risking their reputation and damaging, perhaps irrevocably, their market position. Irresponsible corporate behavior not only deprives shareholders of long term returns but also ultimately imposes a cost on society as a whole. Sustainable business is about ensuring that entities contribute toward positive social, environmental, and economic outcomes. Bad business behaviour is costly for stakeholders, for markets, for society, and the economy alike. To ensure that a company behaves well, the buy-in of the leadership team is crucial. The full commitment of the board of directors in conjunction with the senior managers of the organization is required if an organization is to be socially responsible. In this sense, leadership does not reside with an individual, the CEO, within the organization but with all of those at the apex of corporate power and control. Effective change management requires enlightened and capable leadership to instigate and drive the process of embedding a sustainable and socially responsible corporate philosophy and culture that supports good business decision making. A profound understanding of the requirements of such a leadership process will help corporate managers become highly effective change agents. Governance will be the main driver of this change. For the economy and financial markets to become sustainable and resilient

radical changes in corporate leadership need to take place Integrated reporting government regulation and international standards will all be important factors in bringing about this change As well as understanding the effects of corporate behavior on financial markets such an understanding is also now imperative in relation to the social and environmental contexts
