Oeuvres - Collected Papers IV Jean-Pierre Serre, 2002-12-11 The impact

and influence of J P Serre's work have been notable ever since his doctoral thesis on homotopy groups The abundance of findings and deep insights found in his research and survey papers ranging from topology several complex variables and algebraic geometry to number theory group theory commutative algebra and modular forms continues to provide inspiring reading for mathematicians working in these areas in their research and their teaching Characteristic of Serre's publications are the many open questions he formulates pointing to further directions for research In four volumes of *Collected Papers* he has provided comments on and corrections to most articles and described the current status of the open questions with reference to later findings In this softcover edition of volume IV two recently published articles have been added one on the life and works of Andr Weil the other one on Finite Subgroups of Lie Groups From the reviews This is the fourth volume of J P Serre's *Collected Papers* covering the period 1985-1998 Items numbered 133-173 contain the essence of his work from that period and are devoted to number theory algebraic geometry and group theory Half of them are articles and another half are summaries of his courses in those years and letters Most courses have never been previously published nor proofs of the announced results The letters reproduced however in particular to K Ribet and M F Vignéras provide indications of some of those proofs Also included is an interview with J P Serre from 1986 revealing his views on mathematics with the stress upon its integrity and his own mathematical activity The volume ends with Notes which complete the text by reporting recent

Borel,2014-12-04 Armand Borel s mathematical work centered on the theory of Lie groups Because of the increasingly important place of this theory in the whole of mathematics Borel s work influenced some of the most important developments of contemporary mathematics His first great achievement was to apply to Lie groups and homogenous spaces the powerful techniques of algebraic topology developed by Leray Cartan and Steenrod In 1992 Borel was awarded the International Balzan Prize for Mathematics for his fundamental contributions to the theory of Lie groups algebraic groups and arithmetic groups and for his indefatigable action in favor of high quality in mathematical research and of the propagation of new ideas He wrote more than 145 articles before 1982 which were collected in three volumes published in 1983 A fourth volume of subsequent articles was published in 2001 Volume I collects the papers written from 1948 to 1958 *Collected papers* Gerrit Smith Miller,1900 *Collected Papers* Sir Adolphus William Ward,1921 **Collected papers** Géza Gyula Fejérváry (báró),1909 Collected Papers Mayo Clinic,1920 *Collected Papers* Harvard Medical School. Mathematicians Ioan James, 2002 This 2003 book contains portrayals of sixty mathematicians which collectively convey how mathematics developed into its modern form Lie Groups Beyond an Introduction Anthony W. Knap, 2013-03-09 Fifty years ago Claude Chevalley revolutionized Lie theory by publishing his classic Theory of Lie Groups I Before his book Lie theory was a mixture of local and global results As Chevalley put it This limitation was probably necessary as long as general topology was not yet sufficiently well elaborated to provide a solid base for a theory in the large These days are now passed Indeed they are passed because Chevalley's book changed matters Chevalley made global Lie groups into the primary objects of study In his third and fourth chapters he introduced the global notion of analytic subgroup so that Lie subalgebras corresponded exactly to analytic subgroups This correspondence is now taken as absolutely standard and any introduction to general Lie groups has to have it at its core Nowadays local Lie groups are a thing of the past they arise only at one point in the development and only until Chevalley's results have been stated and have eliminated the need for the local theory But where does the theory go from this point Fifty years after Chevalley's book there are clear topics E Cartan's completion of W Killing's work on classifying complex semisimple Lie algebras the treatment of finite dimensional representations of complex semisimple Lie algebras and compact Lie groups by Cartan and H Weyl the structure theory begun by Cartan for real semisimple Lie algebras and Lie groups and harmonic analysis in the setting of semisimple groups as begun by Cartan and Weyl
