## Off Beat Biologist:

The Case of the Green Turtle Alison Rieser, 2012-07-15 The true story of the controversial battle to save the world's most famous endangered species The journals of early maritime explorers traversing the Atlantic Ocean often describe swarms of sea turtles once a plentiful source of food Many populations had been decimated by the 1950s when Archie Carr and others raised public awareness of their plight One species the green turtle has been the most heavily exploited due to international demand for turtle products especially green turtle soup The species has achieved some measure of recovery due to thirty years of conservation efforts but remains endangered In The Case of the Green Turtle Alison Rieser provides an unparalleled look into the way science and conservation interact by focusing on the most controversial aspect of green turtle conservation farming While proponents argued that farming green sea turtles would help save them opponents countered that it encouraged a taste for turtle flesh that would lead to the slaughter of wild stocks The clash of these viewpoints once riveted the world Rieser relies on her expertise in ocean ecology policy and law to reveal how the efforts to preserve sea turtles changed marine conservation and the way we view our role in the environment Her study of this early conservation controversy will fascinate anyone who cares about sea turtles or the oceans in which they live Life on Ice Joanna Radin, 2017-03-27 After the atomic bombing at the end of World War II anxieties about survival in the nuclear age led scientists to begin stockpiling and freezing hundreds of thousands of blood samples from indigenous communities around the world These samples were believed to embody potentially invaluable biological information about genetic ancestry evolution microbes and much more Today they persist in freezers as part of a global tissue based infrastructure In Life on Ice Joanna Radin examines how and why these frozen blood samples shaped the practice known as biobanking The Cold War projects Radin tracks were meant to form an enduring total archive of indigenous blood before it was altered by the polluting forces of modernity Freezing allowed that blood to act as a time traveling resource Radin explores the unique cultural and technical circumstances that created and gave momentum to the phenomenon of life on ice and shows how these preserved blood samples served as the building blocks for biomedicine at the dawn of the genomic age In an era of vigorous ethical legal and cultural debates about genetic privacy and identity Life on Ice reveals the larger picture how we got here and the promises and problems involved with finding new uses for cold human blood samples Childless: No Choice James H. Monach, 2003-09-02 As many as one in five couples in some population groups might be involuntarily childless and despite the attention attracted by technological advances and media coverage people often feel themselves to be totally isolated stigmatised and misunderstood by many professionals and ordinary people Childless No Choice is based on original research into the emotional and social aspects of involuntary childlessness the main component being a long term study of the experiences of couples attending an infertility clinic supported by a community survey and a study of the attitudes of general practitioners At a time of rapidly developing treatments for infertility and new legislative controls it is important that all

those professionally involved have a full appreciation of the experiences and views of infertile people themselves While there is enormous attention in the media given to getting pregnant and to childbirth there is an almost total neglect of the possibility that for some people these natural functions may not happen James H Monach examines in detail the causes of childlessness and the availability of choices for childless people including artificial insemination fostering and adoption This book will be invaluable to doctors sociologists social workers psychologists health administrators and to anyone who works with childless couples as well as to childless couples themselves

*Queering Reproduction* Laura Mamo, 2007-09-03 Originally developed to help heterosexual couples fertility treatments such as in vitro fertilization and sperm donation have provided lesbians with new methods for achieving pregnancy during the past two decades *Queering Reproduction* is an important sociological analysis of lesbians use of these medical fertility treatments Drawing on in depth interviews with lesbians who have been or are seeking to become pregnant Laura Mamo describes how reproduction has become an intensely medicalized process for lesbians who are transformed into fertility patients not or not only because of their physical conditions but because of their sexual identities Mamo argues that this medicalization of reproduction has begun to shape queer subjectivities in both productive and troubling ways destabilizing the assumed link between heterosexuality and parenthood while also reinforcing traditional heteronormative ideals about motherhood and the imperative to reproduce Mamo provides an overview of a shift within some lesbian communities from low tech methods of self insemination to a reliance on outside medical intervention and fertility treatments Reflecting on the issues facing lesbians who become parents through assisted reproductive technologies Mamo explores questions about the legal rights of co parents concerns about the genetic risks of choosing an anonymous sperm donor and the ways decisions to become parents affect sexual and political identities In doing so she investigates how lesbians navigate the medical system with its requisite range of fertility treatments diagnostic categories and treatment trajectories Combining moving narratives and insightful analysis *Queering Reproduction* reveals how medical technology reconfigures social formations individual subjectivity and notions of kinship
