Ischaemic Heart Disease J.H. de Haas,H.C. Hemker,H.A. Snellen,2012-12-06 The Boerhaave Courses in Cardiology have been held once or twice a year since 1955 For the greater part they were meant for specialists in Cardiology Pediatrics and Internal Medicine who wished to hear about recent advances in Cardiology and in its anatomical and physical basis For some time the courses reflected mostly the work in Leiden especially on congenital heart disease but soon the highly valuable cooperation of other centres was obtained on subjects in which they had more experience In later

years speakers from abroad were also invited and they contributed greatly to the wider scope of the courses. It was thus possible to organize detailed discussions on special subjects by panels of experts for an audience of interested clinical specialists. General reviews were also given for widely varying groups including general practitioners and health officers. The special courses were usually given in English and were international in character while the general courses were given in Dutch. This book reports on a course that united both trends. It was held entirely in English mainly because it was combined with a meeting organized by the Dutch Heart Association and because of the support given by the Secretary of Health who opened this meeting personally and by the European branch of the World Health Organization which was represented by Dr Pisa.

Rapid Prototyping in Cardiac Disease Kanwal Majeed Farooqi, 2017-04-26 This book provides an overview of the use of rapid prototyping in patients with cardiac pathology. With the exponential increase in the use of prototyping or 3D printing technology, medical applications are becoming more widespread across specialties. Although medical centers are beginning to apply this technology for improved patient care, there is no single text to which specialists can refer for guidance about this emerging modality. The book discusses the use of rapid prototyping in medicine: model creation, image acquisition, rapid prototyping techniques, applications in congenital and structural heart disease, and development and management of a rapid prototyping service. The use of rapid prototyping for pre-procedural planning in patients with cardiac disorders such as septal defects, Tetralogy of Fallot, transcatheter aortic valve replacement, and ventricular assist devices, and heart transplant significantly enhances visualization of cardiovascular anatomy. *Rapid Prototyping in Cardiac Disease* is a unique and valuable resource for cardiac imaging specialists, cardiothoracic surgeons, radiologists, and biomedical engineers.
