Real Time Programming 1999:

Real Time Programming 1999 A.H. Frigeri, W.A. Halang, S.H. Son, 1999 In 1999 the IFAC IFIP Workshop on Real Time Programming WRTP joined forces with the Workshop on Active and Real Time Database Systems ARTDB Both series of workshops provide an excellent forum for exchanging information on recent scientific and technological advances and practices in real time computing a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering The annual Workshop on Real Time Programming and the bi annual Workshop on Active and Real time Databases Systems are intended as meetings of relatively small numbers of experts in their fields taking place as truly international events The 1999 Workshop maintained the outstanding quality of both series providing an opportunity to assess the state of the art to present new results and to discuss possible lines of future developments Primarily it focused on software development for real time systems real time operating systems and active and real time database systems In particular the technical programme of the Workshop covered latest research and developments in requirements engineering software engineering active and real time database systems communication and clock synchronisation embedded systems formal methods operating systems and scheduling Out of 58 submissions from 19 countries the International Programme Committee selected 26 regular papers and 8 reserve papers for presentation at the Workshop Contributions come from Europe North America Australia and the Far East In addition to these the programme also featured two world renowned keynote speakers and a discussion panel about the state of the art in the field of active real time database systems

submitted from around the globe Of these nearly half were classified as research pers aguarterasexperiencepapers and the restas both research and experience papers. Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations FM'99 - Formal Methods Jeannette M. Wing, Jim Woodcook, Jim Davies, 1999-09-13 Formal methods are coming of age Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations A transfer of technology into the mainstream of systems development is slowly but surely taking place FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems These proceedings are a record of the technical symposium of FM 99 alo side the papers describing applications of formal methods youwill ndtechnical reports papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia This's cession rejects an increasing openness within the international community of researchers and practitioners papers were submitted covering a wide variety of formal methods and application areas The programmecommittee re ects the Congress s international nature with a membership of 84 leading researchersfrom 38 di erent countries The comm tee was divided into 19 tracks each with its own chair to oversee the reviewing process Our collective task was a di cult one there were 259 high quality s missions from 35 di erent countries Languages and Systems Atsushi Ohori, 2003-11-12 This book constitutes the refereed proceedings of the First Asian Symposium on Programming Languages and Systems APLAS 2003 held in Beijing China in November 2003 The 24 revised full papers presented together with abstracts of 3 invited talks were carefully reviewed and selected from 75 submissions The papers are devoted to concurrency and parallelism language implementation and optimization mobile computation and security program analysis and verification program transformation and calculation programming paradigms and language design programming techniques and applications program semantics categorical and logical foundations tools and environments type theory and type systems Reliable Software Technologies Ada-Europe 2000 Hubertus B. Jensen, 2007-10-23 Large scale open distributed systems provide an infrastructure for assembling global applications on the basis of software and hardware components originating from multiple sources Open systems rely on publicly available standards to permit heterogeneous components to interact The Internet is the archetype of a large scale open distributed system standards such as HTTP HTML and XML together with the widespread adoption of the Java language are the cornerstones of many distributed systems This book surveys security in large scale open distributed systems by presenting several classic papers and a variety of carefully reviewed contributions giving the results of new research and development Part I provides background requirements and deals with fundamental issues in trust programming and mobile computations in large scale open distributed systems Part II contains descriptions of general concepts and Part III presents papers detailing implementations of security concepts **Applications of Intelligent Control to Engineering Systems** Kimon P. Valavanis, 2009-06-11 This book reflects the work of top scientists in the field of intelligent control and its applications prognostics diagnostics condition based maintenance and unmanned systems It includes results and presents how theory is applied to solve real problems Embedded Systems Handbook Richard Zurawski, 2017-12-19 Considered a standard industry resource the Embedded Systems Handbook provided researchers and technicians with the authoritative information needed to launch a wealth of diverse applications including those in automotive electronics industrial automated systems and building automation and control Now a new resource is required to report on current developments and provide a technical reference for those looking to move the field forward yet again Divided into two volumes to accommodate this growth the Embedded Systems Handbook Second Edition presents a comprehensive view on this area of computer engineering with a currently appropriate emphasis on developments in networking and applications Those experts directly involved in the creation and evolution of the ideas and technologies presented offer tutorials research surveys and technology overviews that explore cutting edge developments and deployments and identify potential trends This second self contained volume of the handbook Network Embedded Systems focuses on select application areas It covers automotive field industrial automation building automation and wireless sensor networks This volume highlights implementations in fast evolving areas which have not received proper coverage in other publications Reflecting the unique functional requirements of different application areas the contributors discuss inter node communication aspects in the context of specific applications of networked embedded systems Those looking for guidance on preliminary design of embedded systems should consult the first volume Embedded Systems Design and Verification <u>Implementation of Functional Languages</u> Ricardo Pena, Thomas Arts, 2003-05-20 This book constitutes the thoroughly refereed post proceedings of the 14th International Workshop on the Implementation of Functional Languages IFL 2002 held in Madrid Spain in September 2002 The 15 revised full papers presented were carefully selected from 25 submissions during two rounds of reviewing and revision Among the topics

Zieliński, T. Szmuc, 2005-09-27 The capability to design quality software and implement modern information systems is at the core of economic growth in the 21st century

Nevertheless exploiting this potential is only possible when adequate human resources are available and when modern software engineering methods and tools are used The recent years have witnessed rapid evolution of software engineering methodologies including the creation of new platforms and tools which aim to shorten the software design process raise its quality and cut down its costs This evolution is made possible through ever increasing knowledge of software design strategies as well as through improvements in system design and code testing procedures At the same time the need for broad access to high performance and high throughput computing resources necessitates the creation of large scale interactive information systems capable of processing millions of transactions per seconds These systems in turn call for new innovative distributed software design and implementation technologies. The purpose of this book is to review and analyze emerging software engineering technologies focusing on the evolution of design and implementation platforms as well as on novel computer systems related to the development of modern information services CONCUR'99. Concurrency Theory Jos C.M. Baeten, Sjouke Mauw, 2003-07-31 This book constitutes the proceedings of the 10th International Conference on Concurrency Theory CONCUR 99 held in Eindhoven The Netherlands in August 1999 The 32 revised full papers presented together with four invited contributions were selected from a total of 91 submissions.
