

philosophy of science

Naive Realism

The world I see is real. What are you all arguing about?

Structural Realism

Science has identified real patterns, relationships, and structures (at least within a regime) in nature.

Instrumentalism

Theoretical concepts may have use in predicting observations, but we have no ontological commitments to them.

Scientific Realism

Science makes real progress in describing real features of the world.

Constructive Empiricism

Science aims to give us theories which are empirically adequate, but does not justify metaphysical claims about reality.

Relativism

Social constructivism. Epistemological anarchism.

Realism Rationalism And Scientific Method:

Realism, Rationalism and Scientific Method: Volume 1 Paul K. Feyerabend, 1981-10-29 Over the past thirty years Paul Feyerabend has developed an extremely distinctive and influential approach to problems in the philosophy of science The most important and seminal of his published essays are collected here in two volumes with new introductions to provide an overview and historical perspective on the discussions of each part Volume 1 presents papers on the interpretation of scientific theories together with papers applying the views developed to particular problems in philosophy and physics The essays in volume 2 examine the origin and history of an abstract rationalism as well as its consequences for the philosophy of science and methods of scientific research Professor Feyerabend argues with great force and imagination for a comprehensive and opportunistic pluralism In doing so he draws on extensive knowledge of scientific history and practice and he is alert always to the wider philosophical practical and political implications of conflicting views These two volumes fully display the variety of his ideas and confirm the originality and significance of his work *Realism, Rationalism and Scientific Method* Paul Feyerabend, 1986 **Realism, Rationalism and Scientific Method** Paul Karl Feyerabend, 1985

The Politics and Rhetoric of Scientific Method J. Schuster, R.R. Yeo, 2012-12-06 The institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region An initial lecturing appointment was made at the University of Melbourne immediately after the

Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world. Today there are major Departments at the University of Melbourne, the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand. Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history, philosophy and social studies of science. Each volume comprises a group of essays on a connected theme, edited by an Australian or a New Zealander with special expertise in that particular area. Papers address general issues, however, rather than local or parochial topics are avoided. Furthermore, though in each volume a majority of the contributors is from Australia or New Zealand, contributions from elsewhere are by no means ruled out. Quite the reverse in fact, they are actively encouraged wherever appropriate to the balance of the volume in question.

Kuhn's The Structure of Scientific Revolutions Revisited
 Vasso Kindi, Theodore Arabatzis, 2013-05-20

The year 2012 marks the 50th anniversary of the publication of Thomas S. Kuhn's *The Structure of Scientific Revolutions*. Up until recently, the book's philosophical reception has been shaped for the most part by the debates and the climate in philosophy of science in the 1960s and 1970s. This new collection of essays takes a renewed look at this work. This volume concentrates on particular issues addressed or raised in light of recent scholarship and without the pressure of the immediate concerns scholars had at the time of the *Structure*'s publication. There has been extensive research on all of the major issues concerning the development of science which are discussed in *Structure*, work in which the scholars contributing to this volume have all been actively involved. In recent years, they have pursued novel research on a number of topics relevant to *Structure*'s concerns, such as the nature and function of concepts, the complexity of logical positivism and its legacy, the relation of history to philosophy of science, the character of scientific progress and rationality and scientific realism, all of which are brought together and given new light in this text. In this way, our book makes new connections and undertakes new approaches in an effort to understand the *Structure*'s significance in the canon of philosophy of science.

Scientific Concepts and Investigative Practice
 Uljana Feest, Friedrich Steinle, 2012-10-30

Recent philosophy and history of science has seen a surge of interest in the role of concepts in scientific research. Scholars working in this new field focus on scientific concepts rather than theories as units of analysis and on the ways in which concepts are formed and used rather than on what they represent. They analyze what has traditionally been called the context of discovery rather than or in addition to the context of justification. And they examine the dynamics of research rather than the status of the finished research results. This volume provides detailed case studies and general analyses to address questions raised by these points, such as: Can concepts be clearly distinguished from the sets of beliefs we have about their referents? What, if any, sense can be made of the separation between concepts and theories? Can we distinguish between empirical and theoretical concepts? Are there interesting similarities and differences between the role of concepts in the empirical sciences and in

mathematics What underlying notion of investigative practice could be drawn on to explicate the role of concept in such practice From a philosophical point of view is the distinction between discovery and justification a helpful frame of reference for inquiring into the dynamics of research From a historiographical point of view does a focus on concepts face the danger of falling back into an old fashioned history of ideas *For and Against Method* Imre Lakatos, Paul Feyerabend, 2010-05-27 The work that helped to determine Paul Feyerabend's fame and notoriety *Against Method* stemmed from Imre Lakatos's challenge In 1970 Imre cornered me at a party Paul he said you have such strange ideas Why don't you write them down I shall write a reply we publish the whole thing and I promise you we shall have a lot of fun Although Lakatos died before he could write his reply *For and Against Method* reconstructs his original counter arguments from lectures and correspondence previously unpublished in English allowing us to enjoy the fun two of this century's most eminent philosophers had matching their wits and ideas on the subject of the scientific method *For and Against Method* opens with an imaginary dialogue between Lakatos and Feyerabend which Matteo Motterlini has constructed based on their published works to synthesize their positions and arguments Part one presents the transcripts of the last lectures on method that Lakatos delivered Part two Feyerabend's response consists of a previously published essay on anarchism which began the attack on Lakatos's position that Feyerabend later continued in *Against Method* The third and longest section consists of the correspondence Lakatos and Feyerabend exchanged on method and many other issues and ideas as well as the events of their daily lives between 1968 and Lakatos's death in 1974 The delight Lakatos and Feyerabend took in philosophical debate and the relish with which they sparred come to life again in *For and Against Method* making it essential and lively reading for anyone interested in these two fascinating and controversial thinkers and their immense contributions to philosophy of science The writings in this volume are of considerable intellectual importance and will be of great interest to anyone concerned with the development of the philosophical views of Lakatos and Feyerabend or indeed with the development of philosophy of science in general during this crucial period Donald Gillies *British Journal for the Philosophy of Science* on the Italian edition A stimulating exchange of letters between two philosophical entertainers Tariq Ali *The Independent* Imre Lakatos 1922-1974 was professor of logic at the London School of Economics He was the author of *Proofs and Refutations* and the two volume *Philosophical Papers* Paul Feyerabend 1924-1994 was educated in Europe and held numerous teaching posts throughout his career Among his books are *Against Method* *Science in a Free Society* *Farewell to Reason* and *Killing Time* The *Autobiography of Paul Feyerabend* the last published by the University of Chicago Press **Scientific Realism and the Rationality of Science** Howard Sankey, 2016-04-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind independent world which we inhabit This book articulates and defends that position In presenting a clear formulation and addressing the major arguments for scientific realism Sankey appeals to philosophers beyond the community of typically Anglo American analytic philosophers of

science to appreciate and understand the doctrine The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature

Rhetoric and Incommensurability Randy Allen Harris, 2005-09-19 Rhetoric and Incommensurability examines the complex relationships among rhetoric philosophy and science as they converge on the question of incommensurability the notion jointly though not collaboratively introduced to science studies in 1962 by Thomas Kuhn and Paul Feyerabend The incommensurability thesis represents the most profound problem facing argumentation and dialogue in science surely but in any symbolic encounter any attempt to cooperate find common ground get along make better knowledge and build better societies This volume brings rhetoric the chief discipline that studies argumentation and dialogue to bear on that problem finding it much more tractable than have most philosophical accounts [Kuhn's Intellectual Path](#) K. Brad Wray, 2021-09-30 Thomas Kuhn's *The Structure of Scientific Revolutions* offers an insightful and engaging theory of science that speaks to scholars across many disciplines Though initially widely misunderstood it had a profound impact on the way intellectuals and educated laypeople thought about science K Brad Wray traces the influences on Kuhn as he wrote *Structure* including his Aristotle epiphany his interactions and his studies of the history of chemistry Wray then considers the impact of *Structure* on the social sciences on the history of science and on the philosophy of science where the problem of theory change has set the terms of contemporary realism anti realism debates He examines Kuhn's frustrations with the Strong Programme sociologists appropriations of his views and debunks several popular claims about what influenced Kuhn as he wrote *Structure* His book is a rich and comprehensive assessment of one of the most influential works in the modern sciences [Theories of Scientific Method](#) Robert Nola, Howard Sankey, 2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers

a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years **Interpreting Feyerabend** Karim Bschr, Jamie Shaw, 2021-03-18 Provides a series of essays interpreting and critically evaluating the philosophy of Paul Feyerabend The Reading of Theoretical Texts Peter Ekegren, 2002-01-04 Since the structuralist debates of the 1970s the field of textual analysis has largely remained the preserve of literary theorists Social scientists while accepting that observation is theory laden have tended to take the meaning of texts as given and to explain differences of interpretation either in terms of ignorance or bias In this important contribution to methodological debate Peter Ekegren uses developments within literary criticism philosophy and critical theory to reclaim this study for the social sciences and to illuminate the ways in which different readings of a single text are created and defended *Mapping Scientific Method* Gita Chadha, Renny Thomas, 2022-07-19 This volume explores how the scientific method enters and determines the dominant methodologies of various modern academic disciplines It highlights the ways in which practitioners from different disciplinary backgrounds the humanities the natural sciences and the social sciences engage with the scientific method in their own disciplines The book maps the discourse within each of the disciplines that critiques the scientific method from different social locations in order to argue for more complex and nuanced approaches in methodology It also investigates the connections between the method and the structures of power and domination which exist within these disciplines In the process it offers a new way of thinking about the philosophy of the scientific method Part of the Science and Technology Studies series this volume is the first of its kind in the South Asian context to debate scientific methods and address questions by scholars based in the global south It will be useful to students and practitioners of science humanities social sciences philosophy of science and philosophy of social science Research scholars from these disciplines especially those engaging in interdisciplinary research will also benefit from this volume *Scientific Theories and Philosophical Stances* Claus Beisbart, Michael Frauchiger, 2024-05-20 Since the publication of his seminal monograph *The scientific image* Bas van Fraassen is a key figure in philosophy of science In this book other philosophers with various outlooks critically discuss his work on theories empiricism and philosophical stances The book starts with a new article by van Fraassen on his preferred account of theories the so called semantic view This account is now 50 years old and van Fraassen takes this anniversary as an opportunity to review the account its history and the philosophical discussion about it In the main part of the book Nancy Cartwright Finnur Dells n Matthias Egg Steven French Michael Friedman Milena Ivanova and Michela Massimi discuss van Fraassen s contributions to philosophy Three chapters focus on his engagement with realism French Friedman Ivanova Others study his voluntarism Cartwright and his view on representation Massimi Finally there are contributions about his elaboration of empiricism Dells n and his proposal to consider philosophical positions as stances Egg The volume includes a laudatio written by Steven French and finishes with a reply by van Fraassen to his critics
