Reality Representation And Projection:

Reality, Representation, and Projection John Haldane, Crispin Wright, 1993 Reality Representation and Projection is an important collection of new essays on a range of topics relating to realism and its rivals in metaphysics logic metaethics and epistemology The contributors are some of the leading authors in these fields including the late Ian McFetridge Mark Johnston John Skorupski Christopher Peacocke Michael Williams Edward Craig Michael Smith John Campbell Peter Railton David Wiggins Bob Hale Simon Blackburn John Haldane and Crispin Wright Several of the essays constitute definitive statements of their views In some cases authors write in response to the essays of other contributors while in other cases they proceed independently Although not primarily historical this collection includes discussions of philosophers from the Middle Ages to the present day from Aquinas to Wittgenstein No one seriously interested in questions about realism whether as a general philosophical outlook or as a particular position within specific debates can afford to be without this collection

The Philosopher's Index, 1994 Vols for 1969 include a section of abstracts

Dewey's Empirical Theory of Knowledge and Reality John R. Shook, 2000 The ongoing revival of interest in the work of American philosopher and pragmatist John Dewey has given rise to a burgeoning flow of commentaries critical editions and reevaluations of Dewey's writings While previous studies of Dewey's work have taken either a historical or a topical focus Shook offers an innovative organic approach to understanding Dewey and eloquently shows that Dewey's instrumentalism grew seamlessly out of his idealism He argues that most current scholarship operates under a mistaken impression of Dewey's early philosophical positions and convincingly demonstrates a number of key points that Dewey's metaphysical empiricism remained more indebted to Kant and Hegel than is commonly supposed that Dewey owed more to the influence of Wundt than is commonly believed that the influence of Peirce and James was not as significant for the development of Dewey's theories of mind and truth as has been argued in the past and that Dewey's pragmatic theory of knowledge never really abandoned idealism Shook's exposition of the unity of Dewey's thought challenges a large scholarly industry devoted to suppressing or explaining away the consistency between Dewey's early thought and his later work In every respect Dewey's Empirical Theory of Knowledge and Reality is a provocative and engaging study that will occupy a unique niche in this field It is certain to stimulate discussion and controversy forcing Dewey traditionalists out of habitual modes of thought and transforming our conventional understanding of the development of classical American philosophy

The Blackwell Guide to the Philosophy of Language Michael Devitt, Richard Hanley, 2008-04-15 The Blackwell Guide to Philosophy of Language is a collection of twenty new essays in a cutting edge and wide ranging field Surveys central issues in contemporary philosophy of language while examining foundational topics Provides pedagogical tools such as abstracts and suggestions for further readings Topics addressed include the nature of meaning speech acts and pragmatics figurative language and naturalistic theories of reference

New Pragmatists Cheryl Misak, 2007-03-08 Pragmatism is the view that our philosophical concepts must be

connected to our practices philosophy must stay connected to first order inquiry to real examples to real life expertise The classical pragmatists Charles Sanders Peirce William James and John Dewey put forward views of truth rationality and morality that they took to be connected to and good for our practices of inquiry and deliberation When Richard Rorty the best known contemporary pragmatist looks at our practices he finds that we don't aim at truth or objectivity but only at solidarity or agreement within a community or what our peers will let us get away with saying There is however a revisionist movement amongst contemporary philosophers who are interested in pragmatism When these new pragmatists examine our practices they find that the trail of the human serpent is over everything as James said but this does not toss us into the sea of post modern arbitrariness where truth varies from person to person and culture to culture The fact that our standards of objectivity come into being and evolve over time does not detract from their objectivity As Peirce and Dewey stressed we are always immersed in a context of inquiry where the decision to be made is a decision about what to believe from here not what to believe were we able to start from scratch from certain infallible foundations But we do not go forward arbitrarily That is these new pragmatists provide accounts of inquiry that are both recognizably pragmatic in orientation and hospitable to the cognitive aspiration to get one's subject matter right The best of Peirce James and Dewey has thus resurfaced in deep interesting and fruitful ways explored in this volume by David Bakhurst Arthur Fine Ian Hacking David Macarthur Danielle Macbeth Cheryl Misak Terry Pinkard Huw Price and Jeffrey Stout

Rules, Reasons, and Norms Philip Pettit, 2002-10-31 Philip Pettit has drawn together here a series of interconnected essays on three subjects to which he has made notable contributions The first part of the book deals with the rule following character of thought The second discusses the many factors to which choice is rationally responsive and by reference to which choice can be explained consistently with being under the control of thought The third examines the implications of this multiple sensitivity for the normative regulation of social affairs Thus the volume covers a large swathe of territory ranging from metaphysics to philosophical psychology to the theory of rational regulation The connections that Pettit makes between these areas are original and illuminating Each part of the book develops a key theme The first is that thought succeeds in following rules and overcomes Wittgenstein's rule following problem so far as it is response dependent it is a sort of enterprise that is accessible only to creatures like us for whom certain responses are primitive and shared The second is that while human choice may be sensitive to discursive reasons as we would expect in a thinking subject it can at the same time be subject to the control the virtual control in the model developed here of rational self interest And the third is that the rational interest of agents in achieving esteem in the eyes of others and in avoiding disesteem exercises a virtual form of control that can explain the emergence of norms and various other aspects of social life

Value and Context Alan Thomas, 2010-04-08 Alan Thomas presents an original

study of the status of value and its relation to the contexts in which evaluative claims are justified He articulates and defends the view that human beings do possess moral and political knowledge but that it is historically and culturally contextual knowledge in ways that say mathematical or chemical knowledge is not His exposition of a cognitivist contextualism in ethics and politics builds upon contemporary work in epistemology moral philosophy and political theory to fashion an argument that is relevant to current debates about culture modernity and relativism

Psychic Reality and Psychoanalytic Knowing Barnaby Barratt, 2015-11-06 How do we know our mental life and how is our mental life altered by our efforts to know it better Originally published in 1984 this title attempts an epistemological and ontological discourse concerning the understanding of human mental processes and it aims toward a definitive thesis on the dialectics of knowing and being in this work of psychological understanding What this work reconfronts are questions pertaining to all psychology and to all human sciences Yet much of its focus is on the understanding of unconscious mental contents on the question of knowing and being in Freud's psychology
