Value Karl Marx, 2020-09-28 *Theories of Surplus Value* is a book that unlike Marx actually needs an introduction. *Theories* was intended to be collected and published as the fourth volume to Marx's *Capital* but after Engels had successfully collected and published volumes two and three after Marx's death Engels died before he could publish it. *Theories* has had a long history of being in and out of publication and particularly in and out of being an actually accessible publication. In 1905 the infamously hated by Lenin Karl Kautsky published the first edition of the manuscript in three volumes separated and rearranged by Adam Smith in volume one to David Ricardo in the other two volumes with the breakup of the Ricardian school as the third volume. Kautsky's version circulated in print and was translated to many languages over the decades remaining the sole version of *Theories* until The Institute of Marxism Leninism published a new German version. This arrangement while still relatively close to Kautsky's narrative arrangement of tracing surplus value from Smith to the Ricardian split into vulgar economics annotated the manuscript with different topic headings. This version was then translated into English by Progress Publishers and this is the version of the book which circulates today and is considered to be the most accurate version to Marx's notebooks. This Radical Reprint by Pattern Books is made to be accessible and as close to only manufacturing cost as possible. This first volume of *Theories of Surplus Value* covers the origins of surplus value to clarifying confusion between value and material substance to Adam Smith's definitions of value and the contradictions of Smith's idea on value and profit to another extrapolation on circulation within and by capitalist production and the process of reproduction. These three volumes in totality are to show how the classical theories of value led to a theory stuck within the market paradigm and caught in the loop of capitalist circularity. For Marx the current ontology of political economy only ruled within the scope of pragmatism within the market system and these programs no longer offered any integrated theory of capitalism.

Documentary Aesthetics in the Long 1960s in Eastern Europe and Beyond, 2023-12-18 This book is the first to deal with documentary aesthetic practices of the post war period in Eastern Europe in a comparative perspective. The contributions examine the specific forms and modes of documentary representations and the role they played in the formation of new aesthetic trends during the cultural political transition of the long 1960s. This documentary first hand approach to the world aimed to break up unquestioned ideological structures and expose tabooed truths in order to engender much needed social changes. New ways of depicting daily life writing testimony or subjective reportage emerged that still shape cultural debates today.

The Blue Streak Alexander Rein, 2007-01-29 The hacker's approach to Special Relativity grew out of an attempt to demystify the puzzling features of the theory to intelligent but intuition blocked lay persons by a strategy aimed at this particular handicap. The insufficiently understood basic concepts the most obstinate stumbling blocks are explained at length first. The four dimensional cornerstone of the theory the all important Invariant is presented as a geometric structure analogous to the Diagonal of a box like Frame of Reference to which Time is subsequently added as the Fourth Dimension. The exposition of the theory of Special Relativity is primarily intuition oriented while remaining also geometrically

conceptualized and mathematically developed It is built up from scratch around First Principles starting out with our primitive notions of Space Time and Motion which are then continually updated and refined The conceptual tools and terminology for investigating Linear Motion at Uniform Velocity are provided in a step by step fashion and always visualized by suitable illustrations The Spacetime terrain curved but not spherical and its domains Past Present and Future are defined mapped and explained The standard topics of Special Relativity are individually elaborated in the already introduced step by step fashion and its mathematical results the equations are not just displayed in print as usually done in undergraduate textbooks but are actually derived from familiar situations using only elementary algebra the simplest possible math for the task These derivations are additionally written out fully in longhand for the benefit of those still inexperienced or whose math has all gone to rust The Theory of Relativity is covered in sufficient detail to make this book an optional supplement in a college level physics course It can also serve as a source of information and insight in high school and adult science clubs but above all it was meant to be a self study manual a virtual class room at home a do it yourself tutoring aid Besides standard fare two speculative topics are included 1 a Faster than Light chapter dealing with its chief reputed consequence the reversal of Time Arrow once the travel speed has crashed the Light Barrier and 2 a tentative description of a very very fast moving object caught by our wide open eyes or by a super fast shutter speed camera The book and its intended readership are described in the Preface Basic concepts and a brief historical background of the theory are given in the Introduction In Chapters I XV you ll find the main topics and in the Postscript there are additional comments pertinent to but reaching above and beyond the contents of this book
