Truth Maintenance Systems João P. Martins, Michael Reinfrank, 1991-07-24 The Truth Maintenance Workshop was held in August 1990 during the European Conference on Artificial Intelligence in Stockholm Sweden Ten selected papers eight of them presented at the workshop are included in this volume The papers can be grouped into four main areas Meta level control the goal here is to specify some meta criteria to control the behavior of the TMS Extensions of TMS here the aim is to incorporate new mechanisms into TMS like systems Foundations there is now much interest in providing formal descriptions of TMS proving results about them and relating them with other non monotonic formalisms Belief revision TMS can be considered as providing support to manage the more general problem of belief revision

This six volume set presents cutting edge advances and applications of expert systems Because expert systems combine the expertise of engineers computer scientists and computer programmers each group will benefit from buying this important reference work An expert system is a knowledge based computer system that emulates the decision making ability of a human expert The primary role of the expert system is to perform appropriate functions under the close supervision of the human whose work is supported by that expert system In the reverse this same expert system can monitor and double check the human in the performance of a task Human computer interaction in our highly complex world requires the development of a wide array of expert systems Expert systems techniques and applications are presented for a diverse array of topics including Experimental design and decision support The integration of machine learning with knowledge acquisition for the design of expert systems Process planning in design and manufacturing systems and process control applications Knowledge discovery in large scale knowledge bases Robotic systems Geographical information systems Image analysis recognition and interpretation Cellular automata methods for pattern recognition Real time fault tolerant control systems CAD based vision systems in pattern matching processes Financial systems Agricultural applications Medical diagnosis

New Directions for Intelligent Tutoring Systems Ernesto Costa, 2012-12-06 This book is a result of the NATO Advanced Research

Workshop on New Directions for Intelligent Tutoring Systems held in Sintra Portugal October 6 10 1990 The main idea behind the workshop was to bring together scientists with different concerns about Intelligent Tutoring Systems ITS in order to discuss the positive and negative aspects of the current architecture paradigm expert module student module instructional module and interface module and eventually propose some modifications or radical changes to it This was a consequence of the increasing malaise felt currently by researchers in the area of artificial intelligence and education and in particular by those concerned with ITS One symptom of this state of affairs is the fact that people have started talking about Intelligent Learning Environments ILE instead of ITS To understand the reasons for this situation we promoted the discussion of questions like To what extent do we need the technology of expert systems in ITS Which other relevant AI techniques and

methodologies are urgently needed Is ITS a tool for knowledge communication or is it rather a belief system How can the research already done on interactions among agents be utilized Is it possible to find a formal theory to describe and solve the current problems with ITS The book contains the revised versions of the papers presented at the workshop The new texts reflect the discussions that took place at the meeting

Distributed Reason Maintenance for Multiagent Systems Gerhard K. Kraetzschmar, 1997-10 This book provides a systematic in depth investigation of a class of multiple context assumption based multiagent reasoning problems typical e g for distributed planning scheduling and control First logical and architectural foundations are provided to construct the two systems XFRMS and MXFRMS allowing the development of more complex utilities Then the technology developed for XFRMS in the single agent case is further enhanced to the multiagent situation The multiagent RMS MXFRMS provides along with XFRMS a solid foundation for building more complex utilities such as plan or schedule maintenance systems In the final chapter the software engineer confronted with the task of building a practicable multiagent system can find a discussion of potential uses and future extensions of the systems provided
