## **Recent Advances In Glucocorticoid Receptor Action:**

*Recent Advances in Glucocorticoid Receptor Action* A. Cato, H. Schaecke, K. Asadullah, 2002-09-12 The long term use of glucocorticoids is associated with several deleterious effects Attempts to separate the beneficial from the adverse effects of these compounds have met with varying degrees of difficulty The discovery of distinct modes of action of the glucocorticoid receptor the protein that mediates glucocorticoid action has opened up many possibilities for improving glucocorticoid therapy This book provides an in depth overview of the molecular actions of the glucocorticoid receptor and discusses the chances of an imminent identification of selective glucocorticoid agonists Such compounds should fulfill all the criteria of a glucocorticoid but should lack the sideeffects so far linked with classical glucocorticoids

**Recent Advances in Glucocorticoid Receptor Action** A. Cato, H. Schaecke, K. **Recent Advances in Glucocorticoid Receptor Action** A. Cato, H. Schaecke, K. Asadullah, 2013-10-03 Since 1948 hydrocortisone cortisol the principal glucocorticoid GC of the human adrenal cortex has been successfully used at pharmacological concentrations for the suppression of clinical manifestations of rheumatoid arthritis Numerous compounds with GC activity have also been developed and used Fifty years after their initial clinical use GCs are still the most important and frequently prescribed class of anti inflammatory drugs for various inflammatory disorders They are administered either orally parenterally intravenous intramuscular intrathecal or topically cutaneous intranasal pulmonic rectal Despite the many beneficial effects of GCs they also have their limitations and disadvantages that occur with varying prevalence on different organs and after different durations of therapy These side effects can range in severity from cosmetic e.g telangiectasias hypertrichosis to seriously disabling e.g induction of glaucoma diabetes osteoporosis or even life threatening disorders e.g gastric haemorrhage These adverse effects of GCs seriously handicap their successful use as anti inflammatory agents There is therefore a strong need for the development of substances with the anti inflammatory potency of classical GCs but with reduced side effects

**Neuroinflammation in Stroke** Ulrich Dirnagl, Bernd Elger, 2004-01-14 The successful treatment of acute stroke remains one of the major challenges in clinical medicine Over the last decades the understanding of stroke pathophysiology has greatly improved while the therapeutic options in stroke therapy remain very

limited Today hyperacute mechanisms of damage such as excitotoxicity can be discriminated from delayed ones such as inflammation and apoptosis Targeting of inflammation has already been successfully applied in various stroke models but translation into a clinically efficacious strategy has not been achieved so far In this book leading experts in basic cerebrovascular research as well as stroke treatment review the current evidence for and against an important role for inflammation in stroke and explore the potential of treating or modulating inflammation in stroke therapy Opportunities and Challenges of the Therapies Targeting CNS Regeneration H.D. Perez,B. Mitrovic,A. Baron Van Evercooren,2007-01-19 The therapeutic options for the treatment of Multiple Sclerosis MS and other neurodegenerative and traumatic diseases such as spinal cord injury Alzheimer s Parkinson s disease etc have experienced enormous progress over recent years Despite these encouraging developments available therapies are only partially effective and the ultimate goal is still far from being attained Improved understanding of the cellular and molecular mechanisms of the pathogenesis of neurodegeneration and demyelination has led to a variety of new therapeutic targets and approaches In addition to modulation of the inflammatory process MS and classical neuroprotection stroke AD therapeutic approaches focusing on active remyelination and neuronal regeneration have become increasingly important Based on current concepts this book summarizes new therapeutic approaches Animal Models of T Cell-Mediated Skin Diseases T. Zollner,Harald Renz,Khusru Asadullah,2007-01-19 Pharmaceutical companies are spending increasing amounts of money on drug discovery and development Nevertheless attrition rates in clinical development are still very high and up to 90% of new compounds fail in clinical phase I III trials which is partially due to lack of clinical efficacy This indicates a strong need for highly predictive in vitro and in vivo models The 50th International Workshop of the Ernst Schering Research Foundation focussed on Animal Models of T Cell Mediated Skin Diseases Such animal models should have impact not only on inflammatory dermatoses but also on other inflammatory disorders due to their model character The current volume summarises recent advances in animal research that are important for anti inflammatory drug discovery **Molecular Imaging** Alexei Bogdanov,Kai Licha,2007-01-19 The continuous progress in the understanding of molecular processes of disease formation and progression attributes an increasing importance to biomedical molecular imaging methods The purpose of this workshop was to discuss and overview multiple applications and emerging technologies in the area of diagnostic imaging including its fundamental capabilities in preclinical research the opportunities for medical care and the options involving therapeutic concepts The book provides the reader with state of the art information on the different aspects of diagnostic imaging illuminating new developments in molecular biology imaging agents and molecular probe design and therapeutic techniques **Biocombinatorial Approaches for Drug Finding** W. Wohlleben,T. Spellig,B. Müller-Tiemann,2007-01-19 Genome and proteome based research is generating a significant increase in the number of available drug targets Correspondingly there is an increasing need for novel diverse compounds particularly based on natural compounds as screening resource The purpose of the Ernst

Schering Research Foundation Workshop 51 was to provide a forum for an open exchange on perspectives and limitations of biocombinatorial synthesis and the significance of this technology for future drug discovery in light of this challenge. Experts from academia and industry provided contributions covering the significance of natural compounds for state of the art drug discovery, the underlying basic principle for the biosynthesis of highly complex compounds and the scope and limitations of combinatorial biosynthesis regarding formation, identification, optimisation, isolation and manufacturing of novel biologically active entities.

**The Promises and Challenges of Regenerative Medicine** John Morser, S. -I. Nishikawa, 2007-01-19. Presents the advances in stem cell research. This book discusses the analysis and use of stem cells in basic biology and their application in clinical practice.

Stem Cells in Reproduction and in the Brain John Morser, S. -I. Nishikawa, H.R. Schoeler, 2007-01-19. Recently, expectations of the potential of regenerative medicine have risen because of the exciting results obtained in various areas of research. This book contains contributions from leading researchers in the field who describe their successes and the problems that remain in converting the hopes into concrete therapies. The focus of the book is on the role of stem cells in two main areas: reproduction and the brain, described from molecular, cellular, in vivo and clinical perspectives.

*Chemical Genomics* Stefan Jaroch, Hilmar Weinmann, 2007-05-26. Chemical genomics is a highly interdisciplinary and very exciting field of research both in academics and in the life sciences industry. The Ernst Schering Research Foundation Workshop 58 was organized to bring together scientific leaders in the field to discuss the implications of chemical genomics for drug discovery. Various aspects of the interface between chemistry and biology are covered in this volume, such as chemogenomics efforts in the pharmaceutical industry, diversity oriented synthesis, chemogenomic approaches to the study of cell function, screening technologies and natural products as tools in chemical biology.

**Pituitary Function and Immunity** Istvan Berczi, 1986-02-01. The influence of hormones secreted or regulated by the pituitary gland on the immune system is examined in detail, including discussions of adrenocorticotrophic hormone, glucocorticoids, catecholamines, growth hormone, insulin, prolactin, gonadotropins, sex steroid hormones and thyroid hormones. The relative importance of various hormones in immunoregulation is considered and evidence for interaction between the immune and neurohormonal systems is presented. The possible effects of hormonal immunomodulation in reproduction, infections and parasitic disease, autoimmunity and cancer are examined. This comprehensive reference serves both basic and clinical researchers and practitioners in immunology, microbiology, endocrinology, reproduction biology, neurology, oncology, psychology, medicine and veterinary medicine.
