

The background of the book cover is a detailed, high-magnification scanning electron micrograph (SEM) of a fungal structure. It shows a complex network of long, thin, and slightly curved hyphae. Several of these hyphae terminate in large, rounded, and highly textured heads, which are likely spore-bearing structures or fruiting bodies. The overall color palette is a monochromatic green, with varying shades from dark forest green to a lighter, almost yellowish-green, highlighting the intricate details of the fungal morphology.

Stevens, 2013-11-11 The idea for compiling a book on coccidioidomycosis first began to take shape in my mind in 1976 at an annual meeting of the Coccidioidomycosis Study Group see Chapter 23 in Palo Alto In my discussions with the chairman Demosthenes Pappagianis we agreed that considerable data had accumulated in the almost 20 years since the publication of Marshall Fiese's landmark book *Coccidioidomycosis* Charles C Thomas Springfield Ill 1958 Pappagianis encouraged me to consider writing a new book Also about this time my Stanford colleague Tom Merigan was collaborating in assembling a series of texts on infectious diseases and he added his encouragement to that of Pappagianis I planned to enlist

the collaboration of my colleagues for the multiauthored work I had conceived to encompass the various facets of coccidioidomycosis. The more I worked the more I appreciated the effort that had gone into the Fiese book. I hope the final product is a useful, readable and comprehensive text and reference source for this disease and a worthy successor to the Fiese book. This volume places greater emphasis on the basic science background of present clinical experience and attempts to examine critically the data base and how it fits with recommendations made in the clinical literature. In some of the contributed chapters I made virtually no changes; in others I battered them to fit my preconceptions.

Fungal Dimorphism Paul J. Szaniszlo, 2013-11-11. The tendency of fungi pathogenic for humans to have shapes in tissue distinct from their usual saprophytic morphologies has fascinated the pathologist and medical mycologist for almost a century. A primary reason for this fascination is the possibility that fungal duality of form or dimorphism may be an important virulence factor that allows the zoo pathogenic fungus to survive host defenses. A second reason relates to the desire to gain basic insights into the regulation of cellular development and morphogenesis among the etiological agents of human mycoses. Many excellent treatises have appeared within the recent past dealing with fungal dimorphism. However, it is becoming increasingly clear that it may be beyond the capability of one or a few authors to review this subject adequately. Instead, the ever increasing volume of literature associated with fungal dimorphism and the diversity of fungi now recognized to exhibit a type of dimorphism suggest that a volume comprised of contributions by numerous researchers may be more appropriate. This perception provided me with the motivation to compile a multiauthor volume.

Fungal Antigens Edouard Drouhet, Garry T. Cole, Louis De Repentigny, Jean Latge, 2013-11-11. Three years ago when Professor Garry Cole visited our Mycology unit at the Pasteur Institute we discussed the possibility of organizing a small International Symposium on Isolation, Purification and Detection of Fungal Antigens limited to 8 American/Canadian scientists and to 8 French participants. The location chosen was the Pasteur Institute because of the historical and current importance of the Institute as a Center for Research in Immunology and Medical Mycology. The interest demonstrated by all medical mycologists we contacted led us to expand the small original meeting to an

international symposium in which all aspects of antigens of pathogenic and allergenic fungi and actinomycetes related to man animals and even plants would be discussed Our wish was also to hold this Symposium in the same week as the Anniversary meeting of the French Society of Medical Mycology which was founded at the Pasteur Institute 30 years ago with my colleagues Gabriel Segretain and Francois Mariat

Immunology of Human Infection André J. Nahmias, Richard J. O'Reilly, 2013-11-09 When we were first approached by the senior editors of this series to edit a book on interactions between the host and infectious agents we accepted this offer as an exciting challenge The only condition readily agreed upon was that such a book should focus on the immunology of infections in humans Our reasons if not biases were severalfold We sensed that the fields of microbiology and immunology which had diverged as each was focusing on its individual search were coming together In agreement with the opinions expressed by Dr Richard Krause in the Introduction we strongly believed that the development of the immune system evolved in response to infectious agents and that the evolution of these agents was influenced in turn by the character of the host s responses An intensive examination of the multitude of primitive or more recently developed host defense mechanisms to determine their relative contribution to man s resistance to a given infectious agent appeared to us to be of crucial basic and practical interest Many immune mechanisms studied in animals were being explored in humans and it appeared timely to focus particularly on what was known about man s resistance to infectious agents correlating this information with lessons learned
