Recent Progress In Electron Microscopy Of Cells And Tissues:

Recent Progress in Electron Microscopy of Cells and Tissues Eichi Yamada, 1976 **Electron Microscopy of Plant Cells** C Hawes, 2012-12-02 Electron Microscopy of Plant Cells serves as manual or reference of major modern techniques used to prepare plant material for transmission and scanning electron microscopy There have been other books that generally discuss electron microscope methodology This book focuses on problem areas encountered through the presence of tough cell walls and large central vacuole It details preparative techniques for botanical specimens Each of the nine chapters of this book covers the basic principles useful applications and reliable procedures used on the method of electron microscopy Other topics discussed in each chapter include the general preparation and straining of thin sections quantitative morphological analysis and enzyme cytochemistry This book also explains the immunogold labelling rapid freezing methods and ambient and low temperature scanning electron microscopy among others This book will be invaluable to general scientists biologists botanists and students specializing in plant anatomy *Recent Progress in Hormone Research* James H. Clark, 2013-10-22 Recent Progress in Hormone Research Volume 44 contains examples of the molecular biological approach to unraveling the mysteries of hormone action The book presents papers on the structure and function of receptors and their role in the control of cell function via signal transduction and intracellular second messengers The text also includes papers on the interactions and functions of the inhibin peptides and their role in the control of gonadotropin secretion The role of growth factors and lymphokines in autocrine paracrine and endocrine physiology is also encompassed The book will prove invaluable to endocrinologists physiologists biochemists and scientists involved in hormone research Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 Plasmodesmata: Recent Progress and New Insights Jung-Youn Lee, Tessa Maureen Burch-Smith, Manfred Heinlein, 2022-04-25 Ultrastructure of Endocrine Cells and Tissues P. Motta, 2012-12-06 Innovative microscopic techniques introduced during the last two decades have contributed much to creating a new picture of the dynamic architecture of the cell which can now be more exactly correlated with specific biochemical and physiopathological events These developments have led to significant advances in our understanding of the physiomorphological and pathological aspects of the secretory mechanism as well as the pharmacologic methods used to control experimentally the function of exocrine and endocrine glands The integration of new ultrastructural methods such as freeze fracture etching immunocytochemistry scanning and high voltage electron microscopy cytoautoradiography etc has proven to be of great value when applied to the study of endocrine cells and tissues Because information on this topic has appeared in a variety of scientific and medical journals this book 1 reviews the results of an integrative approach presenting a comprehensive ultrastructural account of the main aspects of the field 2 points out gaps or controversial topics in our knowledge and 3 outlines pertinent directions for future research The chapters prepared by recognized authorities in the field present traditional information on the topic in a concise manner and with a valuable

selection of original illustrations show what the integration of new microscopic methods can contribute to the subject in terms of new concepts This volume will be useful to cell biologists anatomists embryologists histologists pharmacologists pathologists and of course endocrinologists It will also be of interest to students practitioners of medicine and to all others dealing with clinical research and diagnosis Recent Progress in Hormone Research Roy O. Greep, 2013-10-22 Recent Progress in Hormone Research Volume 32 covers the proceedings of the 1975 Laurentian Hormone Conference The book discusses genetic approaches to steroid hormone action the cytochemical bioassay of hormones and crystal structure of steroids The text also describes the gonadotropin releasing hormone and thyrotropin releasing hormone the ontogenesis of pituitary hormones and hypothalamic factors in the human fetus and the etiologies of sexual maturation The epidemiologic studies of diabetes in the Pima Indians and the adrenal cortex and essential hypertension are also considered The book further tackles the testicular control of follicle stimulating hormone secretion and nuclear receptors and the initiation of thyroid hormone action The text then encompasses the receptor function and ion transport in turkey erythrocytes the regulation of adenylate cyclase coupled beta adrenergic receptors and the control of cyclic AMP metabolism in parental and hybrid somatic cells The molecular mechanisms of cyclic AMP action are also looked into Endocrinologists physiologists molecular biologists and biochemists will find the book invaluable **Recent Progress in the Study and Therapy of Brain Edema** K. Go, 2013-03-09 This issue contains the proceedings of the most recent International Symposium on Brain Edema the 5th in a series of conferences starting 1965 in Vienna The ever since increasing interest in this field may not only result from the fact that in clinical terms the problem is not solved yet but also from the many fascinating physiological and biochemical questions remaining Moreover the rapid progress of technical physiological and biochemical developments provides a permanent challenge to probe the subject with better and better resolution The current proceedings provide many examples It is safe to assume that the history of brain edema research is familiar to most of its participants Therefore suffice it to remark that since the first histopathological recognition of brain edema as a separate entity among the multitude of intracranial space occupying lesions progress in the understanding of its pathogenesis has not been straightforward On the contrary it has been complicated by confusing notions and concepts some of which may have resulted from the elusiveness of the edematous changes in early histological studies due to the inadequacy of the light microscope Although brain edema occurs concomitantly in many pathological conditions of the brain it has been suggested that its role is collateral only Nevertheless the potential of brain edema as a space occupying lesion is not trivial since it raises intracranial pressure and eventually may result in lethal cerebral herniation *Cell Biology* Robert D. Dyson, 1978 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1986 **Physiology of the Graafian Follicle and Ovulation** R. H. F. Hunter, 2003-05 The development and selection of ovarian follicles is one of the most active areas of contemporary reproductive research Relevant experimental work extends from laboratory rodents across a wide range of domestic species

to human clinical studies especially as related to problems of fertility and in vitro fertilisation This 2003 volume provides comprehensive coverage of the field integrating research findings from animal and human studies and condensing the vast published literature into a meaningful and digestible physiological account which highlights the key role played by the oocyte in influencing all stages of follicular development

Micromachines as Tools for Nanotechnology Hiroyuki Fujita, 2003-07-11 Addresses the use of MEMS micro electro mechanical systems and micromachined devices for the investigation of nanoscience and technology as well as biotechnology Such micromachined tools for nanotechnology can enhance the sensitivity spatial resolution dexterity selectivity and parallel processing capability in measuring and manipulating nano objects The book covers state of the art MEMS and NEMS devices for DNA molecular handling and analysis cell handling and culture on a chip chemical lab on a chip multi probes for vacuum tunneling microscopy and AFM and characterization of quantum semiconductor structures Readers will gain deep insight into such developments and students will learn about the emerging field of MEMS and

nanotechnology Recent Advances in Mucosal Immunology Jiri Mestecky, Jerry R. McGhee, John Bienenstock, Pearay L. Ogra, 2012-12-06 Increasing interest in the immunology of mucosal surfaces is obvious from the number of publications in scientific journals and from the frequency of national and international symposia devoted to this subject. Particularly encouraging are the large numbers of young investigators who have chosen to work in this area of theoretical immunology with profound practical implications. The two volumes represented here are the result of an International Congress of Mucosal Immunology held at the Niagara Falls Convention Center and the Niagara Falls Hilton on June 29-July 3, 1986. This satellite meeting of the International Congress of Immunology placed emphasis on all aspects of the Mucosal Immune System. This included the regulation of differentiation of mucosal lymphocytes, mucosa-associated lymphoreticular tissue and lymphocyte homing, the immunology of mucosa-associated tissues and glands, effector functions in mucosal immunity and the effects of environmental antigens on the immune response, all of which are included in Volume I. The second volume has emphasized studies of the immune response and effector functions: IgA biosynthesis and transport, IgA proteases and effector functions, developmental aspects and immunodeficiency, the immunopathology of IgA and mucosal immunoprophylaxis. A total of 218 papers are included in these two volumes and a comparison to past meetings held at four to five year intervals indicates the explosive growth of mucosal immunology. **Recent Developments in Insect Neurohormones** M.

Raabe, 2012-12-06 The most striking fact revealed by investigations of insect neurohormones is that insects are as well supplied with neurohormones as mammals, since neurohormones regulate not only the functioning of the endocrine glands (prothoracic gland and corpora allata) but also most physiological processes. Our knowledge of neurohormones developed originally from anatomocytological investigations and experimental studies. Today accurate bioassays have been devised for studying both in vivo and in vitro physiological processes and RIA determination has yielded knowledge of titer modifications of humoral factors. Much is also known about neurohormone purification and several neurohormones have even been identified in different species. Immunocytochemistry has made it possible to demonstrate in their origin and release sites the presence of insect neurohormones whose structure has been elucidated. Moreover, the presence of vertebrate and invertebrate neuropeptides has been demonstrated in insects. As regards biogenic amines, methods of detection have been greatly refined and it is now possible to identify the cell bodies and axons of the main biogenic amines. Other new methods such as cobalt chloride impregnation or Lucifer yellow staining have revealed the axonal pathways and the location of particular neurons. The mechanisms of action of neurohormones have been investigated in several cases and the results of these investigations will be related in the chapters which follow. **New progress in the treatment of bone and soft**
