teaching mathematics in the primary school Combining theory and practice selected experts outline the current context of mathematics education They suggest strategies activities and examples to help develop readers understanding and confidence in delivering the curriculum The book combines an accessible blend of subject knowledge and pedagogy and its key features include Advice on teaching mathematics to high and low attainers Guidance on teaching mental maths Ideas for incorporating ICT Guidance on assessment in mathematics education Teaching problem solving Numerical and non numerical examples Updated references taking into account the Williams Report This book will be of interest to all primary education students and practising teachers looking to increase their confidence and effectiveness in delivering the mathematics curriculum

Children's Mathematics Elizabeth Carruthers, Maulfry Worthington, 2006-08-07 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age Researching Effective CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism Section 115 features children's mathematical graphics and emphasises The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006 The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read Children's Mathematics Making Marks Making Meaning a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I'm sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Coordinator's File Mathematics Association In their exceptionally readable and informative book Children's Mathematics Making Marks

Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics *Mathematics in the Primary School* Sandy Pepperell,Christine Hopkins,Sue Gifford,Peter Tallant,2014-03-18 Now in its third edition *Mathematics in the Primary School* has been updated to reflect recent mathematics curriculum documentation and revised standards for QTS Key areas include The role of talk in learning maths Teacher questioning Development of children s reasoning Creative engagement with maths Assessment for learning and self assessment Suggested resources for teachers including ICT Providing a coherent set of principles for teaching primary mathematics across the main topics in the curriculum the authors explore children s understanding of key areas of mathematics at reception infant and junior levels Important principles and teaching approaches are identified including the use of calculators and computers and there is an emphasis on mental mathematics and problem solving supporting key issues raised by the Williams review 2008 Case studies are used throughout to illustrate how different teaching approaches are put into practice and how children respond to them and there is advice on planning organisation and assessment of mathematical learning in the classroom Emphasising the importance of teachers own mathematical knowledge and offering clear guidance and practical advice this book is essential reading for students NQTs and practising teachers with a focus on primary mathematics **Ability Grouping in Education** Judith Ireson,Susan Hallam,2001-09-11 *Ability Grouping in Education* will provide very useful and timely background for psychologists working with schools where setting or streaming is a major issue *Educational Psychology in Practice* With an anticipated audience of teachers and policymakers this book is user friendly incorporating detailed research findings illustrated by graphs and tables A summary is provided at the end of each chapter offering an overview for the time conscious wishing to skip through the engaging but largely illustrative statistics and quotations However a close reading has its rewards as the extracts from teachers and students offer poignant insight into the enormous complexity and far reaching

implications of ability grouping Cath Lambert Educational Review In this book the authors provide an overview of ability grouping in education They consider selective schooling and ability grouping within schools such as streaming banding setting and within class grouping Selection by ability is a controversial issue linked with conflicting ideological positions and reflected in strong differences of opinion about the merits of selective schooling Educational systems under pressure to produce an educated workforce have led governments to look for ways of raising attainment and grouping by ability is sometimes seen as an organizational solution Drawing on their own and others research in primary and secondary schools the authors provide an accessible analysis of the issues and latest research on ability grouping as well as the implications of ability grouping for teachers managers in education and the wider community This book is for students and practitioners taking courses in school effectiveness education management as well as educational psychologists and local authority professionals Judy Ireson is Senior Lecturer in Psychology and Special Needs at the Institute of Education University of London and Susan Hallam is in the Department of Psychology Special Needs

Teaching and Learning Algebra Doug French, 2004-10-01 Algebra is widely recognised to be a difficult aspect of the Mathematics curriculum one that not all pupils see the point of Yet an understanding of algebra provides the key to the great power and potential interest of Mathematics in general Up to now detailed advice and guidance on the teaching and learning of algebra has been difficult to find Here however Doug French provides a comprehensive authoritative and above all constructive guide to the subject
