Recent Advances in Geometric Inequalities Dragoslav S. Mitrinovic, J. Pecaric, V. Volenec, 2014-01-15 Recent Advances in Geometric Inequalities Dragoslav S. Mitrinovic, J. Pecaric, V. Volenec, 2013-04-17 **Recent Progress in Inequalities** G.V. Milovanovic, 2013-03-14 This volume is dedicated to the late Professor Dragoslav S Mitrinovic 1908 1995 one of the most accomplished masters in the domain of inequalities Inequalities are to be found everywhere and play an important and significant role in almost all subjects of mathematics as well as in other areas of sciences Professor Mitrinovic used to say There are no equalities even in human life inequalities are always encountered This volume provides an extensive survey of the most current topics in almost all subjects in the field of inequalities written by 85 outstanding scientists from twenty countries Some of the papers were presented at the International Memorial Conference dedicated to Professor D S Mitrinovic which was held at the University of Nis June 20 22 1996 Audience This book will be of great interest to researchers in real complex and functional analysis special functions approximation theory numerical analysis and computation and other fields as well as to graduate students requiring the most up to date results **Inequalities: Theory of Majorization and Its Applications** Albert W. Marshall, Ingram Olkin, Barry C. Arnold, 2010-11-25 This book's first edition has been widely cited by researchers in diverse fields The following are excerpts from reviews Inequalities Theory of Majorization and its Applications merits strong praise It is innovative coherent well written and most importantly a pleasure to read This work is a valuable resource Mathematical Reviews The authors present an extremely rich collection of inequalities in a remarkably coherent and unified approach The book is a major work on inequalities rich in content and original in organization Siam Review The appearance of Inequalities in 1979 had a great impact on the mathematical sciences By showing how a single concept unified a staggering amount of material from widely diverse disciplines probability geometry statistics operations research etc this work was a revelation to those of us who had been trying to make sense of his own corner of this material Linear Algebra and its Applications This greatly expanded new edition includes recent research on stochastic multivariate and group majorization Lorenz order and applications in physics and chemistry in economics and political science in matrix inequalities and in probability and statistics The reference list has almost doubled

Inequalities in Geometry and Applications Gabriel-Eduard Vilcu, 2021-03-09 This book presents the recent developments in the field of geometric inequalities and their applications The volume covers a vast range of topics such as complex geometry contact geometry statistical manifolds Riemannian submanifolds optimization theory topology of manifolds log concave functions Obata differential equation Chen invariants Einstein spaces warped products solitons isoperimetric problem Erdős Mordell inequality Barrow's inequality Simpson inequality Chen inequalities and q integral inequalities By exposing new concepts techniques and ideas this book will certainly stimulate further research in the field *Geometric Applications of Fourier Series and Spherical Harmonics* H. Groemer, 1996-09-13 This book provides a comprehensive

presentation of geometric results primarily from the theory of convex sets that have been proved by the use of Fourier series or spherical harmonics An important feature of the book is that all necessary tools from the classical theory of spherical harmonics are presented with full proofs These tools are used to prove geometric inequalities stability results uniqueness results for projections and intersections by hyperplanes or half spaces and characterisations of rotors in convex polytopes Again full proofs are given To make the treatment as self contained as possible the book begins with background material in analysis and the geometry of convex sets This treatise will be welcomed both as an introduction to the subject and as a reference book for pure and applied mathematics

Analytic and Geometric Inequalities and Applications

Themistocles RASSIAS, Hari M. Srivastava, 2012-12-06 Analytic and Geometric Inequalities and Applications is devoted to recent advances in a variety of inequalities of Mathematical Analysis and Geometry Subjects dealt with in this volume include Fractional order inequalities of Hardy type differential and integral inequalities with initial time difference multi dimensional integral inequalities Opial type inequalities Grüss inequality Furuta inequality Laguerre Samuelson inequality with extensions and applications in statistics and matrix theory distortion inequalities for analytic and univalent functions associated with certain fractional calculus and other linear operators problem of infimum in the positive cone α quasi convex functions defined by convolution with incomplete beta functions Chebyshev polynomials with integer coefficients extremal problems for polynomials Bernstein's inequality and Gauss Lucas theorem numerical radii of some companion matrices and bounds for the zeros of polynomials degree of convergence for a class of linear operators open problems on eigenvalues of the Laplacian fourth order obstacle boundary value problems bounds on entropy measures for mixed populations as well as controlling the velocity of Brownian motion by its terminal value A wealth of applications of the above is also included We wish to express our appreciation to the distinguished mathematicians who contributed to this volume Finally it is our pleasure to acknowledge the fine cooperation and assistance provided by the staff of Kluwer Academic Publishers June 1999 Themistocles M Rassias Hari M

Schur-Convex Functions and Inequalities

Huan-nan Shi, 2019-07-08 This two volume work introduces the theory and applications of Schur convex functions The second volume mainly focuses on the application of Schur convex functions in sequences inequalities integral inequalities mean value inequalities for two variables mean value inequalities for multi variables and in geometric inequalities

Geometric Theorems, Diophantine Equations, and Arithmetic Functions

J. Sándor, 2002 **Representation of Lie Groups and Special Functions** N.Ja. Vilenkin, A.U. Klimyk, 2013-04-17 In 1991-1993 our three volume book Representation of Lie Groups and Special Functions was published When we started to write that book in 1983 editors of Kluwer Academic Publishers expressed their wish for the book to be of encyclopaedic type on the subject Interrelations between representations of Lie groups and special functions are very wide This width can be explained by existence of different types of Lie groups and by richness of the theory of their representations This is why the book mentioned above spread to three big volumes Influence

of representations of Lie groups and Lie algebras upon the theory of special functions is lasting This theory is developing further and methods of the representation theory are of great importance in this development When the book Representation of Lie Groups and Special Functions vol 1 3 was under preparation new directions of the theory of special functions connected with group representations appeared New important results were discovered in the traditional directions This impelled us to write a continuation of our three volume book on relationship between representations and special functions The result of our further work is the present book The three volume book published before was devoted mainly to studying classical special functions and orthogonal polynomials by means of matrix elements Clebsch Gordan and Racah coefficients of group representations and to generalizations of classical special functions that were dictated by matrix elements of representations

Selected Topics In Geometry With Classical Vs. Computer Proving Pavel Pech, 2007-11-12 This textbook presents various automatic techniques based on Gröbner bases elimination to prove well known geometrical theorems and formulas Besides proving theorems these methods are used to discover new formulas solve geometric inequalities and construct objects which cannot be easily done with a ruler and compass Each problem is firstly solved by an automatic theorem proving method Secondly problems are solved classically without using computer where possible so that readers can compare the strengths and weaknesses of both approaches

New Horizons in Geometry Tom M. Apostol, Mamikon A. Mnatsakanian, 2017-10-24 Calculus problems solved by elementary geometrical methods page 4 of cover **Analysis, Geometry, Nonlinear Optimization And Applications** Panos M Pardalos, Themistocles M Rassias, 2023-03-20 This volume features an extensive account of both research and expository papers in a wide area of engineering and mathematics and its various applications Topics treated within this book include optimization of control points game theory equilibrium points algorithms Cartan matrices integral inequalities Volterra integro differential equations Caristi Kirk theorems Laplace type integral operators etc This useful reference text benefits graduate students beginning research engineers and mathematicians as well as established researchers in these domains

Automated Inequality Proving And Discovering Bican Xia, Lu Yang, 2016-06-21 This is the first book that focuses on practical algorithms for polynomial inequality proving and discovering It is a summary of the work by the authors and their collaborators on automated inequality proving and discovering in recent years Besides brief introduction to some classical results and related work in corresponding chapters the book mainly focuses on the algorithms initiated by the authors and their collaborators such as real root counting real root classification improved CAD projection dimension decreasing algorithm difference substitution and so on All the algorithms were rigorously proved and the implementations are demonstrated by lots of examples in various backgrounds such as algebra geometry biological science and computer science
