Hrdina,1986-06-20 Techniques in the neurosciences are evolving rapidly There are currently very few volumes dedicated to the methodology ployed by neuroscrentists and those that are available often seem either out of date or limited in scope This series is about the methods most widely used by modern day neuroscientists and 1s written by their colleagues who are practicing experts Volume 1 will be useful to all neuroscientists since it concerns those procedures used routinely across the widest range of s drsciplines Collecting these general techniques together in a single volume stnkes us not only as a service but will no doubt prove of exceptional utilitarian value as well Volumes 2 and 3 describe all current procedures for the analyses of ammes and theirmetabolites and of amino acrds respectively These collections will clearly be of value to all neuroscientists working in or contemplating research in these fields Similar reasons exist for Volume 4 on receptor binding techniques since experimental details are provided for many types of ligand receptor binding including chapters on general prin ples drug discovery and development and a most useful app dix on computer programs for Scatchard nonlinear and compe tive displacement analyses Volume 5 provides procedures for the assessment of enzymes involved in biogenic amine synthesis and catabolism Volumes in the NEUROMETHODS series will be useful to neurochemists pharmacologists physrologists anatomists psychopharmacologists psychiatrists neurologists and chemists organic analytical pharmaceutical medicinal in fact everyone involved in the neurosciences both basic and clinical *Receptor Binding. Neuromethods* Alan A. Boulton,Glen B. Baker,Pavel D. Hrdina,1986 **Brain Receptor Methodologies Pt A** Paul J. Marangos,2012-12-02 Brain Receptor Methodologies Part A General Methods and Concepts Amines and Acetylcholine provides information pertinent to neurotransmitter and neuromodulator receptors in brain This book explores the methodologies that can used to address several basic and clinical problems Organized into two sections encompassing 18 chapters this book starts with an overview of the receptor concept which can be validated from indirect evidence obtained in studies of the quantitative aspects of drug antagonism This text then examines the radioligand receptor binding interactions Other chapters consider immunocytochemistry which has a primary role in determining the precise distribution of regulatory peptides to neural and endocrine elements of the diffuse neuroendocrine system The final chapter discusses the use of the radioligand binding procedure for the study of muscarinic receptors which has expanded the area of muscarinic receptor pharmacology Biochemists pharmacologists physiologists and researchers engaged in the fields of neurobiology and neuroscience will find

this book extremely useful *Neurochemistry of Cholinergic Receptors* Eduardo D. P. De Robertis, Jochen Schacht, 1974

Brain Receptor Methodologies Paul J. Marangos, Iain C. Campbell, Robert M. Cohen, 2013-10-22 Brain Receptor Methodologies Part B Amino Acids Peptides Psychoactive Drugs is the second of the two part first volume of the Neurobiological Research series which provides a comprehensive view of various subdisciplines within neurobiology The first volume Parts A and B deals with the area of neurotransmitter and neuromodulator receptors in brain future volumes will cover the subdisciplines of neuroanatomy neurophysiology brain specific macromolecules neurochemistry and behavioral neurobiology It is hoped that the series will be of equal value for both basic as well as clinical scientists Part B continues from Part A with the remainder of Section II specific receptor binding methodologies Subsection II B deals with receptors for amino acids and neuropeptides and covers areas including GABA glycine carnosine opiates bombesin CCK TRH and substance P Amino acids probably represent the majority of brain neurotransmitter substances at least relative to the amines and acetylcholine although with the exception of GABA the amino acids remain relatively uncharacterized in brain Their further study should receive high priority Receptors in the Nervous System Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands *Chemical and Functional Assays of Receptor Binding* Barry I. Hoffer, Society for Neuroscience, Nancy R. Zahniser, 1986 **Methods in Neurotransmitter Receptor Analysis** Henry I. Yamamura, S. J. Enna, Michael J.
